# HOW TO USE THIS GUIDE

This guide was created with several different types of players in mind. *Mass Effect* veterans may already know what they are in for and how the game unfolds between the Normandy, Citadel, planet-based missions, and space exploration. However, if this is your first time exploring the world of *Mass Effect*, you'll find that it can be experienced as minimally or richly as you choose.

## SINGLE-PLAYER CAMPAIGN

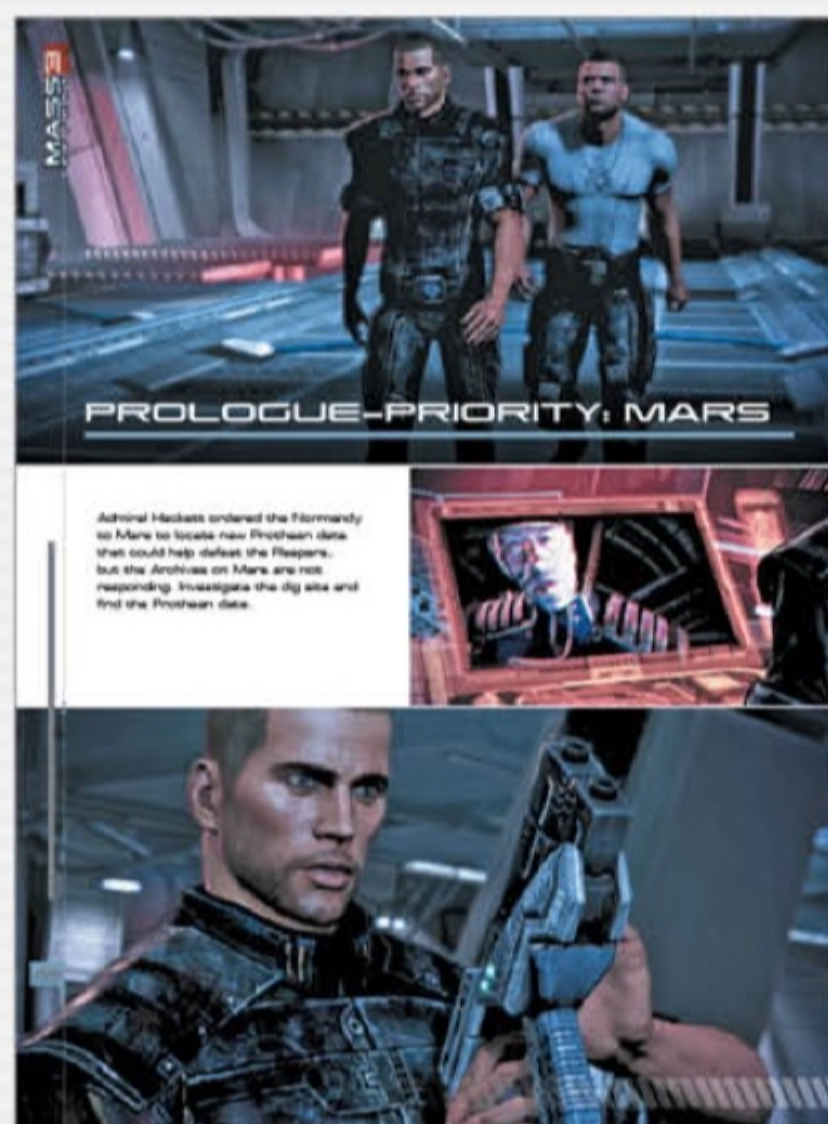

Players, new or old, who want to experience the rich, complex tale of *Mass Effect 3* should begin with the single-player campaign (page 105). In the Campaign section, we've broken down the game to just the critical path, or "Priority," missions. These are the missions that must be completed in order to experience the main story only. However, each mission is broken down even further so you can get the most out of your game.

### MISSION OPENER

At the beginning of every mission is a carefully constructed "preparation" section comprised of several smaller sections. The first is the mission opener, which has several components:

- » Mission name broken down by act and mission title: "Act 1—Priority: Sur'Kesh," for example.
- » Mission description: This will recap what you've accomplished thus far and what the mission goal is.
- » Mission Screens: Several screens will highlight the action and familiarize you with some of the key battle locations you may encounter.

Though it may not be a wealth of information, the mission opener will give you a glimpse of what you're in for.

### MISSION BRIEFING

The "Mission Briefing" section breaks down two key components of each mission: the battlegrounds overview and consequence overviews.

**Battlegrounds:** This subsection of the Mission Briefing will reveal what types of terrain and enemies you will encounter during the upcoming mission. It will tell you whether the areas you will encounter are narrow halls, wide-open battlegrounds, debris-covered cities, or complex multileveled facilities. Furthermore, it may also tell you about what kinds of enemies you'll encounter. On occasion, you'll even get recommendations on what types of classes, weapons, or squadmates will be most helpful during your mission. Everything in this section is meant to help you prepare all battle scenarios you may encounter.

**Consequence Overviews:** This subsection lightly covers the general types of conversation and choices you may have to make while on this mission. Paragon/Renegade dialogue choices aren't covered in great detail (so as to avoid spoilers), but you will be told when and with whom they take place to better prepare you for the conversation. In many cases this section will also tell you about big, game-altering decisions that you may need to make.

### ITEM REQUISITIONS RUNDOWN

Scattered throughout every mission are weapons, useful items, weapon mods, and other things worth picking up. Whenever you encounter one of these items, you will see an Item Requisitions box pointing it out. All of the items in a mission are listed here, in the Item Requisition Rundown. That way, you know exactly what types of items you will find during a particular mission.

## AROUND THE GALAXY

As you progress through each mission of the single-player campaign, several other side missions, like N7 or Citadel missions, will become available. These missions are not integral to the main campaign; you can complete them at your leisure or not at all. To see when these missions become available (unlock) and become unavailable (lock), check the Around the Galaxy section. This section will also tell you on what page you can go to complete said missions.

### NOTE

Missions lock and unlock differently. For example, a Citadel mission may become available at a certain point in the game, but you must still listen to the appropriate ambient conversation to obtain it. Other missions, like N7 missions, automatically unlock and become available without you having to do anything. Meanwhile, nearly every mission will remain available once unlocked, up until "Priority: Horizon." There are a few missions that become unavailable (lock) after certain conditions are met. Those lock conditions for those missions are explained in their respective Around the Galaxy sections.

## WAR PREPARATIONS

Prior to every mission, you will also encounter a "War Preparations" section. Here you can read about what is going on between missions aboard the Normandy, the Citadel, and elsewhere. This section will clue you in to possible romance conversations, important dialogue options, and even help you stay ahead of the game with suggestions on when to upgrade weaponry. This section is for players who want to get more out of their single-player campaign but don't want exhaustive point-by-point instructions on what to say or do.

Players who wish to focus on the mission only can skip this entire section and go straight to the mission header following the "War Preparations" section.

## REPUTATION

One of *Mass Effect 3*'s most important systems is the Reputation system. As you complete missions, help others, or explore the galaxy, your reputation on the galactic stage will grow. This will unlock new dialogue options in key conversations, giving you better solutions to some otherwise-difficult moments.

Reputation can be, but does not have to be, flavored as either Paragon or Renegade. You can gain Paragon reputation for taking the gentle, sympathetic, and legal route through conversations and missions, while you gain Renegade reputation for taking the harsh, pragmatic, or violent route. Many choices are morally gray and will

give reputation that is neither Paragon nor Renegade. In conversation, Renegade dialogue options are usually on the lower half of the conversation wheel, while Paragon dialogue options are on the upper half of the wheel. You can also earn reputation by taking interrupts, seizing control of the conversation, and earning a name across the galaxy as someone who makes waves.

When you gain reputation, regardless of whether it is Paragon, Renegade, or unflavored, it increases your overall Reputation score to unlock new dialogue options.

## MULTIPLE APPROACHES

As you progress through the mission walkthrough sections, you'll find that certain key battles have multiple approaches. Most have two approaches; some even have three. This is to highlight the multitude of strategies that are possible throughout the game. Vanguard players may find that a specific strategy in tight spaces works far better than a sniper-proficient class. Similarly, an Engineer may have a

tougher time getting out of a particular battle than an Adept. We can't possibly provide every strategy for every battle encounter, so instead we provide you at least two different approaches as suggestions.

Consider them recommendations; we encourage you to find a strategy that works best for you. After all, not all Shepards are created alike, so no two strategies will always work for everyone.

### PREVIOUSLY IN MASS EFFECT

*Mass Effect* is a long-running series that spans several games, novels, graphic novels, and other mediums. For players who have already experienced *Mass Effect* and are bringing their game saves into *Mass Effect 3*, we've included these "Previously in Mass Effect" sidebars. Here you will learn about some of the many possibilities available for story variations.

For example, players who imported a game save from *Mass Effect 2* where Jack is still alive, may be happy to see that she appears during a particular side mission. If you didn't import the same save state, then you may miss out on the differences. In "Previously in Mass Effect" sidebars, we highlight those subtle variations for all players to enjoy.

# INTRO TO MASS EFFECT

## MASS EFFECT

In 2183, the galaxy faced a threat that was once considered a myth, supported only in the broken remnants of a civilization known as the Protheans. It was said that the Reapers, a super-advanced extra-galactic race, were responsible for the cleansing of all organic life in the galaxy every 50,000 years. The myth was soon proven to be real. The galactic cycle was coming to an end; the Reapers were coming.

Commander Shepard, a member of the human Systems Alliance, managed to defy the expectations of the galactic community. He/she became the first human Spectre (who are agents of the galactic Citadel Council) and stopped the treacherous actions of Saren Arterius, a former Spectre. Indoctrinated into subservience by the Reaper vessel called Sovereign, Saren believed that obedience could save organic life in the galaxy from the coming destruction. Only after a costly battle was the galaxy spared the immediate threat.

The Reapers were merely delayed, not stopped. Commander Shepard vowed to find a way to fend off the inevitable invasion.

## MASS EFFECT 2

Despite overwhelming evidence to support the coming Reaper menace, the politicians of the Council believed Sovereign had been the creation of the geth, a race of synthetics. Shepard would pay for their ignorance, and so would his closest allies. The Normandy, a frigate under the Spectre's command, would be attacked by a vessel belonging to the enigmatic Collectors. Mere weeks after the triumph over Sovereign, Shepard was dead to the galaxy, and everything revealed about the Reapers was filed away as delusions and paranoia.

The Cerberus organization, led by the Illusive Man, was the only force in the galaxy that truly believed in what Shepard had revealed about the Reapers. Recovering the Spectre's corpse, Cerberus spent two years and untold sums of money rebuilding the hero and the Normandy. The unlikely alliance had one goal: to seek out the agents of the Reapers, the Collectors. While Shepard lay on an operating table, the Collectors began harvesting hundreds of thousands of human colonists for reasons unknown. The Illusive Man wanted Shepard to pursue the Collectors to their headquarters in an unmapped sector of space, find out what they were doing to their victims, and put a stop to it permanently. Even for such a skilled Spectre, the odds of survival were slim at best.

To accomplish this suicide mission, Shepard needed a new team. Gathering the most skilled, most ruthless, and most determined men and women in the galaxy, Shepard once again succeeded where others predicted failure. The Collectors were defeated.

The Reapers, patient as they always had been, regarded this as a mere inconvenience. They would find another way.

Cerberus had an ulterior motive to bringing back an agent who once interfered with their operations throughout the galaxy. They wanted to use the technology discovered in the aftermath of the Collectors' defeat to prepare humanity for the Reapers and to place the human race above all others in the galaxy. Shepard would eventually split from Cerberus and desperately fight to stall the invasion. This extreme action taken by the Spectre would eventually strip the Normandy from their command, awaiting court-martial at the hands of the Systems Alliance.

In 2186, the shadow of the Reapers finally cast itself across the galaxy, and the Earth would find itself facing the tip of the spear....

## WHAT IS MASS EFFECT 3?

The third game of the action role-playing game franchise that started in 2007, *Mass Effect 3* places players in the role of Commander Shepard, as he or she leads a squad trying to fend off the greatest threat to galactic civilization ever seen. Using a wide variety of weapons and special powers, players must fight their way through a relentless enemy. Success on the battlefield yields experience points that go toward improving your team and earns you money that goes toward improving your equipment.

You won't win the war through violence alone. A staple of the franchise, some of the most important battles are won and lost based on your choices made in the branching dialogue system. Also returning to the game is the morality system, which determines your overall alignment and what special dialogue options are available. Your choice of words and actions will help form a coalition that, with luck, will be capable of striking back against the Reapers.

With the Reapers striking so hard across so many fronts, the war is much bigger than any one squad can turn the tides of—even a squad led by a living legend like Commander Shepard. To that end, Shepard must gather War Assets from as many species and as many worlds as possible. Some War Assets are earned in combat. Others are earned through skillful diplomacy.

Returning players who import their endgame saves from previous *Mass Effect* games will find that the decisions they've made as Shepard will continue to affect the overall story and may have special advantages over those just now starting the series. They retain perks from their previous gameplay and have access to War Assets that are unique to imported characters. However, even newer players are capable of reaching for the best possible ending, thanks to a new feature introduced to *Mass Effect 3*: the Galaxy at War.

# GALAXY AT WAR INTRODUCTION

The Galaxy at War cooperative multiplayer, a franchise first, is not just for fun: Your successes and failures also directly influence the galactic Readiness Rating across the five sectors of the Milky Way. The total readiness of the galaxy indicates how well the War Assets fighting in those regions are weathering the Reaper advance. The overall percentage also determines how much each asset can contribute to the war effort. It also determines how prepared your War Assets are to move at a moment's notice and is a critical factor in defeating the Reapers.

A basic example would go something like this: An Alliance marine unit is worth 100 points. However, your Readiness Rating is at only 50 percent, so the Effective Military Strength asset can contribute to the final push is 50 points. Now take that Readiness Rating and apply it to every War Asset you collect throughout the single-player campaign. Suddenly that 2,000 point armada is much less effective.

Cooperative multiplayer is the primary way to increase your Readiness Rating in *Mass Effect 3*. Working with other players around the world, you create a team

of elite soldiers and fight to maintain a hold of objectives that Commander Shepard helped liberate from enemy hands in the single-player story. Each battle, won or lost, raises overall galactic readiness, with victories contributing more to readiness than losses. In this way, even players who do not have access to War Assets that are available only to imported Shepards can boost the power of their fleets to be capable of standing up to the Reapers.

The percentage of Readiness Rating gained for each multiplayer session changes based on several factors:

- » If the player plays a random multiplayer map (the random option must be selected), they earn a 3 percent bonus to overall galactic readiness.
- » If the player plays a specific map, the sector the map takes place in gains a 7 percent bonus, with overall readiness going up by 1 percent.
- » Failing to complete a map offers a lower Readiness Rating increase compared to a successful mission.

The Readiness Rating does not stay maxed out forever. It is in a state of constant decay. A week of inactivity can reduce readiness by nearly 7 percent, but it will never fall below 50 percent. In order to maintain it, players are encouraged to put some time into multiplayer. However, this is optional! It is still possible to reach the end game, but the available endings are tied to both the Effective Military Strength of the forces you gather for the fight and how high your Readiness Rating is. Certain ending sequences are directly affected by these factors as well.

# SPECIAL TACTICS AND RECONNAISSANCE

Mass Effect 3 is a story involving billions of creatures throughout the galaxy as the Reapers begin their death march through all civilization, but it centers around one special individual: Commander Shepard, a member of the human Alliance Navy and the first human to join the elite Citadel Spectres.

Prima Official Game Guide

*Mass Effect 3* is a story involving billions of creatures throughout the galaxy as the Reapers begin their death march through all civilization, but it centers around one special individual: Commander Shepard, a member of the human Alliance Navy and the first human to join the elite Citadel Spectres.

Spectres are the hidden blade of the Citadel Council and are given full authority to resolve situations in the way they see necessary in order to preserve the galactic status quo. They are above traditional authority and are held to different standards than any soldier from any other species. They are as valued for their skills as negotiators as they are for their skills at assassination. In *Mass Effect 3*, the decisions Shepard will make using Spectre authority can influence the fates of whole species.

Longtime fans will have had two previous games to make the character their own. New players will have to create a Shepard from scratch and craft him or her into their vision of a formidable galactic savior. They will need to develop their social and martial skills, being mindful of the consequences of their decisions. They will need to be armed and armored with the best that credits can afford. They will need to be the best war fighters possible and use every skill at their disposal to their advantage. The enemy faced is nothing short of the vanguard of oblivion for all sapient species.

# CHARACTER CREATION

New and returning players alike have the opportunity at the start of *Mass Effect 3* to create or re-create the appearance of Commander Shepard. Players new to the series will also be able to select from several key background elements that will help shape Shepard's story during the course of the game.

## GAME MODES

One of the new additions to *Mass Effect 3* is the ability for players to choose between three different gameplay modes based on their personal preferences. You cannot change this once the game has begun, so consider carefully how you want to experience the game!

### NOTE

**Not one of these modes is considered canon! What is canon to some players may not be to others. Your decisions are your own, so do not feel pressured to select a certain mode over others or make decisions that you do not agree with!**

### ACTION MODE

Action mode emphasizes the combat of *Mass Effect 3*, and all major decisions and conversations have a mixture of Paragon or Renegade responses. This allows players to concentrate entirely on preparing for and engaging in combat.

### STORY MODE

A setting designed for players who are less comfortable or skilled with action games, Story mode makes combat much easier to complete, while allowing players to experience the traditional dialogue system the *Mass Effect* franchise is known for. You can still die in battle if you're careless, but putting some effort into it will allow you to succeed far more often than not.

### ROLE-PLAYING MODE

This is the traditional form of *Mass Effect* that fans are familiar with. In Role-Playing mode, players will face challenging combat and experience all the dialogue options and character interactions throughout the whole game. This mode is exactly what returning fans have come to expect, and new players looking to experience the entirety of *Mass Effect 3* are encouraged to select this mode.

### TIP

**Overall combat difficulty can be chosen in the Options menu, which can change things such as the resilience and lethality of enemies and their level of aggression. If you want a challenge, flip on Insanity and try not to break any controllers or keyboards.**

## APPEARANCE

Your facial appearance is based entirely on your personal preferences and does not affect the story or combat. You can select from several preset faces and can edit them with the various tools, or you can stick with an imported face from a *Mass Effect 2* endgame save. A passcode appears on the Facial Customization screen that changes with every alteration you make, allowing you to share your Shepard with others.

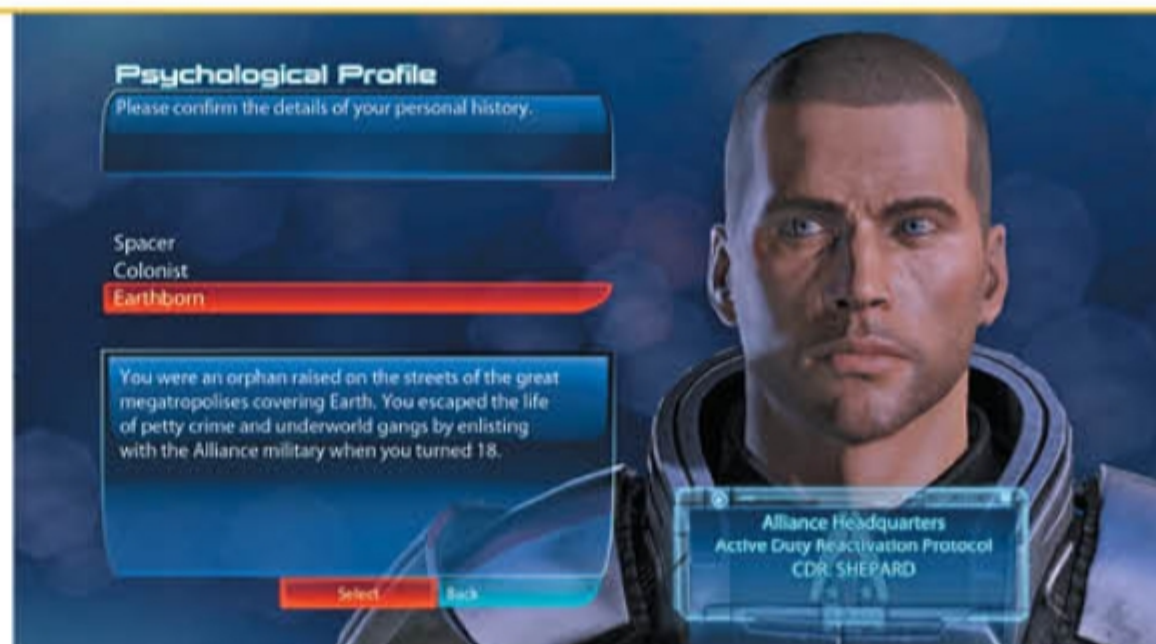

Facial alterations are divided into several categories, and within each there are multiple options from which to choose, from nose size, eye color, jawline, hair, makeup for the ladies, even the size of Shepard's mouth.

## PERSONAL BACKGROUND DATA

New Shepards can select from a series of backgrounds and psychological profiles that help determine their initial overall Reputation and their Paragon and Renegade scores. This also helps determine which characters new players will meet in *Mass Effect 3*. New to the series is a set of options to determine the combat losses Shepard's allies have sustained during previous adventures.

Imported Shepards cannot change their background, psychological profile, or combat losses. These are determined by choices made in the previous games.

Backgrounds

- » **Spacer:** Both of your parents were Alliance military officers, and as a child, you spent most of your time on ships or stations, rarely staying in one spot for long as the family was transferred from post to post. At the age of 18, you followed the family footsteps into military service.
- » **Colonist:** You were born on the colony world Mindoir, located in the Attican Traverse. When you were 16, slavers raided the colony, slaughtering family and friends alike. A passing Alliance patrol managed to save you, and a few years later, you joined the Alliance military.
- » **Earthborn:** Born in one of the massive cities that have spread across the Earth, you were raised on the streets. At 18, you escaped your life of petty crime and gangland violence, enlisting in the Alliance military.

Psychological Profiles

- » **Sole Survivor:** During your Alliance service, a mission went horribly wrong. Cut off from any support, you were forced to overcome intense physical and psychological hardships as your squad was whittled down to you alone. You remained strong under pressures that would have broken lesser soldiers.
- » **War Hero:** In your early days of military service, the colony planet Elysium, located at the Skyllian Verge, was attacked by pirates and mercenaries in what would be called the Skyllian Blitz. You single-handedly rallied resistance efforts at key positions until Alliance reinforcements arrived. Your actions on that day have made you a hero.
- » **Ruthless:** Your military career has been defined by your willingness to get the job done at any cost. You have sent men and women to their deaths to accomplish goals and have mercilessly executed captured enemy soldiers in order to make a point. You get things done and are feared and respected for it.

Combat Losses

- » **Kaiden Alenko:** A male human Biotic who served under Shepard during *Mass Effect 1*. During a mission to the planet Virmire, a pivotal decision needed to be made between saving him or another squadmate. Kaiden was left behind in order to save the rest of the team.
- » **Ashley Williams:** A female human soldier who served under Shepard during *ME1*, she was the other teammate who could be rescued from Virmire, but only at the cost of the other.
- » **Numerous Losses:** The large numbers of friends and allies who have died around Shepard have started to take a serious psychological toll on him/her. This also means that a large portion of the cast who would typically play a role in the events of *Mass Effect 3* are dead or you never met them in the first place. In the case of the surviving crew member from the first *Mass Effect*, it will always be the one of opposite sex to Shepard.

TIP

It is recommended to new players to choose either Kaiden or Ashley for combat losses. With the Numerous Losses option, you lose out on some very entertaining characters that people new to the series ought to experience. It also never hurts to have more options for selectable squadmates for combat missions.

CLASSES

Once you’ve determined your appearance and psychological profile, you are now given the choice of six different classes to make Shepard. Even importing players get a choice of what class to play as. Available classes are:

- |               |            |            |
|---------------|------------|------------|
| » Soldier     | » Vanguard | » Adept    |
| » Infiltrator | » Sentinel | » Engineer |

Each of these classes has its own power sets and preferred battlefield roles. For more information on these classes, see “The Squad” chapter.

NOTE

See pages 48-75 for more information about classes.

CHARACTER IMPORTATION

Veteran players of *Mass Effect 1* and *2* can bring their Shepards into *Mass Effect 3*, carrying the weight of all the decisions made in those previous games. Major plot events, that brand-new Shepards have difficulties finding solutions for, may have additional new characters or options available to imported Shepards.

Imported *ME2* Shepards receive the following bonuses:

- » Character’s level
- » Talent points
- » All of their powers (excluding any bonus powers)
- » A 15 percent bonus to their Paragon or Renegade ratings

For players who finish *Mass Effect 3* and wish to play through it again, the game allows you to import your endgame Shepard into a new game file, retaining the following:

- » The character’s level, experience, talent points, and powers (including the bonus power)
- » Credits
- » Current Renegade/Paragon rating
- » All weapons, mods, and armor

As an added bonus, Shepards who have completed one playthrough of *Mass Effect 3* are able to upgrade their guns even further than before. The first playthrough restricts weapon upgrades at Level 5; repeat playthroughs allow for upgrades up to Level 10!

# CHARACTER DEVELOPMENT

Character development in *Mass Effect 3* isn't just about what level you've reached, what powers you've chosen to improve, or what guns you carry. It also involves the Paragon or Renegade decisions you've made through conversations you've had with other characters throughout the story. Shepard's Reputation also factors in, opening up new options that possibly would not be available otherwise. Ultimately, some things can't be resolved with firepower alone. It is important to manage the various aspects of Shepard in such a way that you're able to get the outcomes you desire, on and off the battlefield.

## PARAGON OR RENEGADE?

During the course of *Mass Effect 3*, you'll often be asked to make some tough decisions as a means to an end or decide on an appropriate dialogue response based on your own feelings. It can be as simple as being nice to a potential romantic interest or planting a fist firmly in the face of a crew member when they least expect it or deciding the fate of a planet that is under Reaper assault. It is important to stress that there is not a single "right" decision. You can be the most ruthless and renegade Commander Shepard around, or you can be kind and helpful, or you can be a little of both and still reach the end of the game based on the decisions you've made.

### PARAGON

This side of the spectrum is the more diplomatic of the two alignments. Potential love interests typically respond better to Paragon answers during conversations. These are usually on the upper half of the conversation wheel. The Paragon path usually has the least amount of bloodshed, but this can sometimes play against you. A fully Paragon Shepard may not be able to acquire certain War Assets because of his leanings, or a potentially dangerous threat could be set loose simply because you weren't willing to finish the job.

### RENEGADE

While not necessarily evil, Renegade choices are often seen in a negative light. Renegade is not about playing it safe or nice. Renegades will just as soon shoot an unarmed man as they would an armed one; they would shoot a friend in the back if it meant the ultimate mission was a success. They will bribe, cajole, and kill, and do it with their ultimate goal in mind at all times. Certain War Assets can only be acquired through this path, and certain quests can be made easier to accomplish, if you feel the ends justify the means. Just remember that ruthlessness can alienate certain allies, and a bully may find himself without friends.

### NOTE

Certain conversation options require very high Paragon or Renegade levels, something that may be difficult for new Shepards to achieve in a single playthrough. Fortunately, multiple playthroughs allow players to carry over special bonuses to these ratings, allowing new conversational options to be opened up. Being consistent with your responses also helps boost those levels faster.

## INTERRUPTS

Returning from *Mass Effect 2*, Interrupts are timing-based events that can occur midconversation. An icon will appear onscreen, telling players to hit a certain trigger or button before the icon vanishes. These are color-coded red for Renegade and blue for Paragon. Interrupts are worth additional points toward either alignment, sometimes by a significant amount, so keep your eyes open for Interrupt indicators. Pay attention to the color! Just because an Interrupt is available does not necessarily mean you want to trigger it! For instance, if a virus was being uploaded to a defense network, and your dying ally tells you to stop the upload, you may not want to trigger the Interrupt that will save his life if you don't feel comfortable with sacrificing millions of lives for one soldier. Interrupts like this can change the tone of a conversation and sometimes may sour relations with important individuals or even lead to violence and deaths!

## REPUTATION

A new mechanic introduced to *Mass Effect's* morality system, Reputation points are gained by engaging in conversation with squadmates, intervening in conversations and debates between two NPCs, and by making tough Renegade or Paragon decisions. Reputation is another variable that factors in to whether you can successfully persuade others to see your point of view or diffuse a highly volatile situation. Reputation isn't just something that supplements your Paragon or Renegade scores. Some of the most important turning points in the game require high levels of Reputation.

### NOTE

Only Shepard needs to worry about Paragon, Renegade, and Reputation levels. No other character has these values being tracked.

## AMBIENT CONVERSATION

As you walk through the Citadel and the Normandy, you will sometimes hear exchanges between two characters, with icons indicating Shepard can support one side of the conversation or the other. Selecting one boosts your Reputation and can lead to new or improved War Assets that will determine the success of the Citadel races against the Reapers.

Some conversations you can't actively participate in, but instead they prompt Shepard to locate a specific item somewhere in the galaxy or in the middle of a larger mission. For example, you overhear an asari scientist lamenting her inability to get her hands on some Biotic amps that would boost her people's performance in combat, thereby giving you a better War Asset. She might even say where the amps can be located, and as it turns out, it's where you were headed next on an assignment. You'll get a notification that this is an objective that can be accomplished in your Codex. If you find the amps she's looking for during your mission, you can return to her to complete the side quest.

## YOUR POWERS

The other part of character development in *Mass Effect 3* comes from the more traditional method of earning experience points, gaining levels, and distributing the points earned with every level into the powers you prefer the most. Shepard and his/her squadmates all gain experience at the same rates, even if not deployed in actual combat. Leveling your powers requires more points the higher you go in their respective trees, but the benefits are worth it.

In addition to the active combat powers, every class includes a set of passive skills that boost damage from weapons, Biotics, Tech powers, and melee strikes. They also include stacking Reputation and alignment bonuses, which can help boost those levels to where they need to be to grant access to certain dialogue options. For complete listings of all the powers across each class, check out "The Squad chapter." (see page 44).

# PREPARING FOR AND GETTING TO THE FIGHT

The Reapers open new fronts across the entire galaxy over the course of *Mass Effect 3*, but they aren't the only threats that you must deal with. Cerberus forces, under the command of the Illusive Man, have staked their own claims, actively attempting to sabotage the already failing unity of the Citadel races. The geth are resurgent with the coming Reaper onslaught. There's a whole lot of galaxy to save, but Shepard is one Spectre, in command of one squad, on a lone ship. Being well equipped counts for as much as being an excellent shot or a powerful Biotic, but you need more.

There are two central locations that you will revisit on a regular basis between combat zones: the Normandy and the Citadel (see page 356-357 for labeled maps). Here you will find the extra edge needed to give the whole galaxy a fighting chance.

## THE NORMANDY

The iconic vessel that has seen service across the *Mass Effect* franchise, the Normandy SR2, is your mobile command center. It once flew Cerberus's colors. Now it is firmly back in control of the Alliance military and has seen some improvements befitting a more militaristic mind-set. The Normandy is a warship, and it does its job of supporting Shepard and allies before and after every battle. The Normandy retains its four decks, as seen in *Mass Effect 2*, with physical modifications and the addition of a fifth deck, the shuttle bay.

In addition to providing a place to gird for battle, the ship is also a place to chat up your crew. Be sure to do this between every major assignment, as new conversations may be available. Potential romances can be pursued among the crew, and Alignment and Reputation can also be influenced here as well.

### THE CAPTAIN'S CABIN

Also called "the Loft" by Cerberus dockworkers during the SR2's construction, the captain's cabin is a place for Commander Shepard to relax between missions, potentially with a romantic interest. Occasionally, crew members will request a meeting in private with Shepard, and they can be called up to the cabin via the private terminal. An aquarium is available for Shepard if you purchase pet fish from the markets on the Citadel or via the Requisitions terminal in the shuttle bay. A portrait of Shepard's love interest can appear on the desk near the private terminal. A display case for the various ship models that you can collect throughout the adventure is also found in this room.

### THE COMBAT INFORMATION CENTER

The nerve center of the Normandy has seen some dramatic overhauls. The forward section of the Combat Information Center (CIC) retains the Galaxy Map for Shepard to direct the ship to the next destination, and there's a private terminal to receive new messages and

assignments. Joker still reigns in the forward cockpit as the pilot of the Normandy, assisted by EDI. Ensign Traynor, your communications specialist on post near the Galaxy Map, will alert you to new assignments or requests from other crew members.

The most dramatic changes are aft of the forward CIC. A security station separates the two sections and leads directly into a meeting room and the war room.

It is in the war room that Shepard can check the status of all War Assets acquired during the course of the story and see the overall galactic Readiness rating. Additionally, dual Quantum Entanglement Communicators allow for Shepard to receive reports from the war-torn Earth and from Admiral Hackett.

## THE CREW'S QUARTERS

The crew's quarters is where the needs of the men and women of the Normandy are met. Entertainment is located in the port and starboard recreation lounges, and showers are available in gender-specific bathrooms. The medbay is located on this deck, where Shepard can respec his/her powers as necessary. Across from the medbay are the executive officer's quarters, where Liara will make her home once she comes aboard the Normandy. The calibration stations for Normandy's guns await the attention of a skilled crewman. At the center of it all, the crew mess hall provides warm meals.

## ENGINEERING

Crew Chief Adams now holds down the Normandy's engineering section, monitoring the primary drive core for any abnormalities. This deck can also be home to crew members you pick up along the way. For example, the war reporter Diana Allers will make her home in the starboard-side cargo room.

## SHUTTLE BAY

Similar to the old Normandy SR1, the shuttle bay contains all the vehicles needed for planet-side insertions into hostile territory. More importantly,

everything you need to get ready for a mission in advance is held here. Your shuttle pilot, Cortez, handles all requisition orders you may need to make from the Normandy, reducing time spent having to travel to the Citadel to purchase new armor or weapon mods. The moment you access any store, Cortez will create a network with it, allowing direct purchases from the Normandy in exchange for a 10 percent increase in prices.

Weapons can also be upgraded from a terminal in the shuttle bay. Weapon upgrades are limited to a maximum of five times per weapon during the first playthrough, with the limit increased to ten on future playthroughs. Any weapon in your possession can also be modified using any of the mods you've purchased or located during missions. You can also set up the loadouts of Shepard and any available squadmate in advance, making it easier to get into a mission that much faster.

## TRAVEL

As soon as you complete the initial prologue missions, the Normandy comes under your full control. You are free to roam about the galaxy as you see fit, in search of potential War Assets or salvage. The ship can take you to any priority missions or side missions that are currently available. The ship's capabilities may be familiar to series veterans, but there are new things that have been introduced.

## THE GALAXY MAP

### Galaxy View

Located in the center of the CIC, the Galaxy Map allows you to chart a course between various star clusters in the galaxy. Priority missions and major special assignments are marked on the pertinent clusters in this display.

### System View

After you select a star cluster to visit, the Normandy will travel via a mass relay to the system within a cluster that contains its own relay. But things get complicated when Reapers are a factor.

The Reaper invasion has touched almost every corner of the galaxy. As you move the Normandy through a system, you may be on an assignment that requires you to fire off a wide-range sensor pulse that will help detect any War Assets or salvage on the planets in a system. This sensor pulse in turn is picked up by the Reapers.

A Reaper Awareness bar will appear onscreen, letting you know that the Reapers are tracking you. If the bar becomes full, all of the Reapers on the outskirts of a system will come after you, and if they catch the Normandy, they will destroy it, no questions asked.

### CAUTION

Once the Reapers are alerted, they will eventually catch you. The Normandy is not fast enough to outrun them forever; they will eventually accelerate to speeds far beyond what the Normandy can manage. Your only defense in this case is to leave the system altogether. If there's a planet that you need to scan but the Reapers are already alerted, try to leave the system, then come back, making a beeline for the planet. Get your business over with, and get out!

### Orbital View

This view is available when you close in on a planet and select to orbit it. Previously in *Mass Effect 2*, you needed to scan every world for resources

and fire off probes to collect them. This is not the case with *Mass Effect 3*. You can scan and probe planets only if the sensors picked up something of value in the System View mode. For missions that require the squad to be deployed, you can select to land on the planet from this display.

### CAUTION

Orbiting a planet is not enough to shake Reapers off your trail once they have been alerted! They will simply wait for you to break orbit before continuing their pursuit.

### Cluster View

Travel between solar systems switches the Galaxy Map to this view mode. The big difference in traveling through this view is that it requires fuel.

Running out of fuel between systems is highly inadvisable since it forces the Normandy back to the system with the mass relay. Given that not every system has a convenient fuel depot available, returning to a Reaper-infested area could be the last thing you ever do. Consider that before beginning intersystem travel within a cluster.

## THE CITADEL

Still the center of galactic civilization, the Citadel is a massive construct once believed to be abandoned by the highly advanced Protheans over 50,000 years ago. The dark truth is that the Citadel was actually a mass relay of epic proportions, to be activated by the Reaper vanguard Sovereign and usher in a full invasion, years before galactic civilization could even hope to begin mounting a counterattack. Commander Shepard was able to stop this, with the help of some very good allies, but it was not enough to fully deter the Reapers. They have finally come.

The Citadel is a place of constant transition throughout the story of *Mass Effect 3*. Many side quests become available here between every major assignment, and you can miss these forever if you progress beyond a certain point in the story, as the Citadel begins to feel the effects of the war to greater degrees. In addition to side quests that can start from conversations on the Citadel, it is a place to buy weapon mods and armor pieces that will be critical to your success, without the 10 percent extra tacked on to purchases aboard the Normandy.

Whenever the Normandy docks at the Citadel, your crew will also disembark for shore leave, trying to decompress from all the pressure the war is heaping upon them. It is possible to earn Paragon, Renegade, and Reputation points just by talking to them.

There are a total of six levels to explore on the Citadel, each serving their own purpose (see pages 356-357 for labeled maps).

## NORMANDY DOCK: D24

D24 is where you first arrive on the Citadel during the early events of *Mass Effect 3*. It is a small and cramped location, but you may meet a squad member from Shepard's past here. You also see the war reporter Diana Allers here, initially.

## DOCK REFUGEE CAMP

Initially, you do not have access to this level of the Citadel, but once you do, several side quests transpire in this location. More importantly, survivors of the

Batarian Hegemony have turned up here in droves after the devastating opening days of the Reaper onslaught and have set up a shop where purchases can be made. You may also find a squadmate during visits to the Citadel here, helping injured refugees from stricken worlds.

## CITADEL EMBASSIES

The heart of politics in the galaxy, the Citadel Embassies is a hub of frenzied activity that only grows as the war drags on. Many side missions start at the embassies, with numerous returning characters making appearances here. The Embassies have three major offices accessible to Shepard:

- » **C-Sec Commander's Office:** Promoted by Counselor Udina, Commander Bailey holds court in his office. He is a valuable contact for all things C-Sec related.
- » **Human Embassy:** The current human representative on the Council, Donnel Udina, has his main office on this level of the Citadel. Your initial dealings with the Council are facilitated by him at this office.
- » **Spectre Requisitions:** After being reinstated as a Spectre, you also get access to Spectre exclusive data resources and the opportunity to buy three of the most expensive weapons in the game. This is definitely a set of weapons you'll want to buy from the Citadel proper, as ordering from the Normandy adds a 10 percent tax to these weapons, and they already cost a significant amount as is!

## PURGATORY BAR

Holding court here in the wildest (and unsanctioned) club on the Citadel is Aria, the most feared crime boss on Omega. Her reasons for being here and not on her home turf will become clear once you finish speaking with her. James Vega can be found here, along with soldiers of various species all trying to keep their minds off of the war, even for just a short while.

## HUERTA MEMORIAL HOSPITAL

Already busy when you first arrive on the Citadel, this hospital is gearing up for a veritable flood of casualties as the war heats up. Pay attention to the various doctors roaming the facility with each visit; you might hear opportunities to gain some valuable War Assets, or even see some familiar faces among the crowd.

## PRESIDIUM COMMONS

The largest and busiest part of the Citadel, the Presidium Commons contains the majority of the stores the Normandy can network with, providing the bulk of your purchasable armor and weapon modifications. Many side quests will take you to and from the Commons, so get to know the area well.

## ARMAMENTS AND ARMOR

The Reapers have ships almost two kilometers in length or greater, dwarfing most vessels of any given Citadel race. They land on planets by the dozens, scorching whole swaths of land with their powerful weapons, crushing underfoot anything that dares to stand against them. They send armies of indoctrinated, Reaperized soldiers to overwhelm the meager number of defenders that remain after such an onslaught. Cerberus, with its virtually unlimited resources, has some of the best technology mankind can offer and turns it willingly on fellow man and alien without mercy. In light of recent events, even the geth are a resurgent force in the galaxy. You need firepower of your own to even begin stopping them all, and armor to survive the inevitable pounding you will receive.

### WEAPONS

*Mass Effect 3* provides five types of firearms to use against your foes: pistols, shotguns, submachine guns, assault rifles, and sniper rifles. In previous games, Shepard's effectiveness with guns depended largely on what class you chose to play as. In *Mass Effect 3*, there are no restrictions regarding what types of guns Shepard can take into combat. If you want to bring a sniper rifle and a shotgun as a Vanguard, go for it. It is totally possible to run through the entire game with the weapons you are comfortable with.

There is one major factor to consider when selecting your weapons, and that is their weight. Weight directly influences the cooldown times of all the powers Shepard has. Taking all the heaviest firepower you can muster can increase power cooldowns by up to 200 percent! On the other side of the spectrum, taking a light loadout can significantly speed up power cooldowns, an excellent bonus for classes and character builds that reward rapid power usage. Certain passive skills can decrease the weight of a gun or increase total carrying capacity. Submachine guns have a special mod that can reduce their weight significantly, making room for heavier weapons in a loadout.

Weapons can be upgraded a maximum of five times on a first playthrough in single-player. In successive playthroughs, the limit is raised to 10. These upgrades can be purchased from the Normandy's Shuttle Bay. Multiplayer weapon upgrades max out at 10, with no prior restrictions.

Most weapons you unlock in single-player mode will be found during missions. Once Shepard is reinstated as a Spectre, you'll be able to buy three very special Spectre-issue weapons...at a steep price.

In multiplayer, guns and their upgrades work similarly, though they come fairly randomly through purchases of special reinforcement packs. Characters in multiplayer are also limited to two guns. See the "Multiplayer" chapter for more details (page 370).

PISTOLS

Pistols are your most basic firearm, specializing primarily in short- to mid-ranged combat. They range from rapid-fire semiautomatics to hand cannons with heavy recoil and high damage. In spite of their size, pistols make remarkably solid backup weapons due to their typically light weight. Pistols are faster on the draw than other weapons, making them excellent to switch to if a primary weapon is out of thermal clips. Of special note is the Scorpion pistol, which fires small explosives that adhere to hostiles, with a slight delay before detonation. Melee combat with pistols can be surprisingly effective, as there are mods that add a shock effect to each swing of the weapon, stunning unprotected targets.

M-5 Phalanx

**Availability:** Found during "Priority: Tuchanka" (page 194)

The M-5 Phalanx is the product of the Alliance's Offensive Handgun Project, a close-range weapon with no loss of stopping power in comparison with a soldier's assault rifle. The Phalanx enjoys a ballistics advantage over most heavy pistols. Civilian variants are often purchased by colonists on planets that have dangerous big-game animals.

Arc Pistol

**Availability:** Found during "Priority: Perseus Veil" (page 219)

An innovation of Admiral Daro'Xen, the Arc Pistol is a scaled-down Arc Projector that requires only thermal clips to solve its power problems. The Arc Pistol uses an invisible laser to ionize the air and create a path for a high-ampere electric shock. For a more damaging blast, it can be charged up.

M-358 Talon

**Availability:** Found during "Priority: Citadel" (page 206)

The Talon is a close-range pistol favored by Cerberus Guardians. Firing heavy-gauge shotgun pellets, it delivers massive trauma to unarmored targets. Its waste heat is so excessive that it carries six separate ammunition blocks, rotating like a 20th-century revolver to prevent shaver jam or misfire due to premature melting of the shot.

Scorpion

**Availability:** Found during "Priority: Sur'Kesh" (page 161)

Originally issued to the salarian Special Tasks Group to allow small units to get much larger enemy forces under control, the Scorpion pistol now sees service galaxy-wide. It fires low-velocity, squash-head projectiles with a dual use. The high-explosive filler within the projectiles contains an adhesive that secures the projectile to the target on impact. When fired into a surface, it turns into a proximity mine.

M-77 Paladin

**Availability:** Spectre Requisitions

The Paladin is a reliable, durable weapon developed by law enforcement looking for a high-powered but easily concealed sidearm for undercover agents. Surprisingly small for its hitting power, the Paladin is a variant on the Carnifex pistol. While it has a smaller clip than the Carnifex, its shots are unquestionably more powerful.

N7 Eagle

**Availability:** Collector's Edition

When the Alliance's Offensive Handgun Project received funding to update one of its designs, its engineers chose to redesign the already impressive Phalanx pistol. Like its predecessor, the Eagle is a compact, fully automatic pistol that delivers unprecedented accuracy and punch with a rapid firing rate. The Eagle is named after the Desert Eagle, a classic handgun that gained a romantic reputation among gun collectors, thanks to its popularity in 20th- and 21st-century Earth action movies.

SHOTGUNS

Providing one of the most powerful close-ranged punches in the game, shotguns are the answer to almost anything that gets too close to you. Precision is not what these weapons are known for. Combined with an aggressive player and a resilient class build, it's possible to be nearly unbeatable at close range. Unfortunately, there are serious drawbacks to these weapons. They typically do not have large thermal clip capacities, and this can lead to situations where you're stuck trying to reload the shotgun at the worst time or forced to switch out to a new weapon.

Geth Plasma Shotgun

**Availability:** Found during "Priority: Rannoch" (page 258)

This three-barreled geth weapon fires miniature but potent cluster rounds of superconducting projectiles and has a longer range than standard shotguns. A two-stage trigger system allows for either quick-fire capacitors or a charge-and-release attack to electrify the projectiles as they exit the weapon. As the rounds hit the target, they fragment and electricity arcs between the pieces, flash converting the air to conductive plasma. The resulting impact, heat, and electrical charge overloads shields and causes massive trauma to unarmored targets.

Graal Spike Tower

**Availability:** Found during "Priority: Tuchanka" (page 189)

The Graal is one of a long line of krogan weapons used to hunt thresher maws. Its ammunition consists of oversized fléchettes meant to pierce thresher hide and create deep wound channels that lead to massive blood loss. For additional firepower, the weapon is double-barreled and, as a last resort, possesses blades to cause internal injuries if the wielder is swallowed by the thresher. Using a Graal on a humanoid target has predictably grisly effects. Its shots can be charged for more damage.

M-11 Wraith

**Availability:** Spectre Requisitions

The Wraith is favored among mercenaries, pirates, and slavers in the Terminus systems. Its high-impact damage and sturdy construction make it a popular "quick-draw" shotgun. A variant of the M-22 Eviscerator, the Wraith is in high demand, even though the weapon is banned in Citadel space. In order to lighten its weight, the Wraith holds fewer shots than the Eviscerator.

M-22 Eviscerator

**Availability:** Found during "Grissom Academy: Investigation" (page 340)

The Lieberschaft 2180 shotgun, or "Eviscerator," is of human civilian design and has a unique ammunition generator. Where most modern firearms slice ships or pellets from an ammunition block, the M-22 shaves off serrated metal wedges designed to fly aerodynamically. This dramatically improves its armor-piercing capabilities, and its tight grouping ensures lethality at longer ranges than standard shotguns. This design violates several intergalactic weapons treaties, so the M-22 is not distributed to militaries.

**Availability:** Found during "Lessus: Ardat-Yakshi Monastery" (page 349)

Originally handcrafted for the exclusive use of Justicars, the Disciple shotgun's schematics were finally released to asari commandos after centuries of negotiation. The Disciple uses shells packed with micro-scale submunitions to deal staggering amounts of damage. Even shielded enemies are stunned by the force of a blast from this weapon.

## M-300 Claymore

**Availability:** Found during "Attican Traverse: Krogan Team" (page 175)

The Claymore used to be a hard-hitting but poor-selling shotgun due to kickback problems snapping the arms of anyone but a krogan firing the weapon. After a rehaul of its kinetic dampening system, the Claymore is being rolled out again. As a way to lure back customers, the gun's manufacturer has lowered the shotgun's selling price without skimping on its stopping power.

**Availability:** Collector's Edition

Bruised and bloody Alliance marines on Torfan attributed their survival against waves of batarian mercenaries to the precision and stopping power of the Crusader. With a design patterned on riot shotguns, this weapon has a moderate rate of fire that rewards careful aiming. Since this accuracy requires little room for error, the Crusader is primarily used by highly trained soldiers.

## SUBMACHINE GUNS

Occupying a middle ground between pistols and shotguns, the submachine guns provide close- to midranged lethality, coupling well with ammunition powers like Cryo or Incendiary ammo. SMGs suffer during sustained fire, rapidly becoming inaccurate over longer distances. However, SMGs can absolutely rip apart armor, making them solid choices once the shields and barriers of a target are stripped away. Of all the weapon types, SMGs benefit the most from being combined with special ammunition, as their high rates of fire ensure that the effects of each ammo type "stick" much sooner. It's not uncommon to see an SMG kitted out for reduced weight alongside heavier guns within a player's arsenal.

M-25 Hornet

**Availability:** Found during "Priority: Citadel" (page 206)

The Hornet is a long-range submachine gun created by Cerberus. It is standard equipment for Cerberus troops, who are trained to handle the recoil from the gun's three-round bursts. Cerberus designed the Hornet to conserve ammunition and provide cover fire during prolonged conflicts.

While some militaries pass on the Hurricane because of its lower accuracy, the Alliance feels the gun's rapid firing rate offers excellent suppressive fire. A disciplined marksman can use the fully automatic submachine gun to chew through targets with alarming speed. Alliance officers were so pleased with field results that the Hurricane is now many squadrons' standard-issue SMG.

# ASSAULT RIFLES

The workhorse weapon of the game, the assault rifle can perform adequately at every range. These rifles enjoy decent rates of fire, good stopping power, and solid accuracy even at more extreme ranges. There's a lot of variety in the available ARs as well. For example, the M-96 Mattock boasts good killing power, high accuracy, and semiautomatic capability that rewards players who can keep putting rounds into critical spots on a target, even while on the move. Meanwhile, the starting M-8 Avenger provides full auto capability that remains surprisingly accurate even for longer bursts. Because of the generally high accuracy of these weapons, adding a scope or stability mod is highly recommended, giving many of these weapons near-laserlike precision.

## M-8 Avenger

**Availability:** "Prologue: Earth" (page 111)

The Avenger is a common, versatile, military-grade assault rifle manufactured by the Elkoss Combine. It's accurate when fired in short bursts, and deadly when fired on full auto. The modular design and inexpensive components of the Avenger make it a favorite of military groups and mercenaries alike. The rifle has a reputation for being tough, reliable, easy to use, and easy to upgrade.

A medium-range, semiautomatic rifle, the Mattock is a hybrid weapon with an assault rifle's low heat production and a sniper rifle's punch. Marksmen favor its increased power over that of an assault rifle to bring down hardened targets. Its lack of a full-auto setting is advertised as a feature rather than a shortcoming, as it curbs a soldier's tendency to spray inaccurate fire under stress.

## Geth Pulse Rifle

**Availability:** Found during "Priority: Perseus Veil" (page 220)

Geth pulse rifles are comparable to a standard stock assault rifle but are finely balanced with low recoil and incredibly high accuracy. The pulse rifle fires a rapid stream of lightweight slugs that are wrapped in a phasic envelope to increase their damage.

## Phaeston

**Availability:** Found during "Tuchanka: Turian Platoon" (page 168)

Named after a turian spirit of creation, the Phaeston was engineered to provide the best possible balance between accuracy and firepower in a machine gun. Each shot is tempered by kickback dampeners inside the shoulder stock, which lets the Phaeston pack more punch than other weapons its size without sacrificing precision. Its fully automatic fire and relatively light weight has turned the Phaeston into the turian infantry's primary go-to weapon.

M-15 Vindicator

**Availability:** Found during "Priority: Mars" (page 124)

A battle rifle that fires in three-round bursts, the Vindicator is favored by assassins and elite mercenaries and is deadly at any range. Manufactured by Elanus Risk Control Services for the Blue Suns mercenary group, the Vindicator is popular in the Terminus systems.

M-76 Revenant

**Availability:** Found during "Priority: Citadel" (page 205)

The M-76 Revenant unleashes a storm of deadly high-velocity slugs. It has low accuracy but a high thermal clip capacity and packs considerable firepower. This weapon is protected against replication by sophisticated Fabrication Right Management (FRM) technology. Only the richest and most powerful warlords can afford the Revenant.

M-99 Saber

**Availability:** Found during "Priority: Horizon" (page 290)

A heavy-duty semiautomatic rifle favored by only the most elite marksman, the M-99 Saber is jokingly referred to as "the Big Iron" for its sheer stopping power. Each M-99 Saber is designed specifically for its owner, making it one of the Alliance's more expensive weapons.

M-37 Falcon

**Availability:** Found during "Priority: Cerberus Headquarters" (page 299)

This Alliance rifle launches 25-mm mini-grenades. Lighter and more accurate than most grenade launchers, the Falcon burns through specialized ammunition and standard thermal clips. A field fabrication kit generates this ammunition, leaving the clips as the rifle's only limitation.

SNIPER RIFLES

Accurately firing from great distances is the job of the sniper rifle. Favored by the Infiltrator class the most, many sniper rifles provide single, powerful shots before charging a new thermal clip into place. There are some semiautomatic rifles that make for great midranged weapons. While the sniper rifle is typically meant for longer ranges, it's possible to use them in close quarters. This is especially true during single-player, where mods exist to slow down time and allow for lethal snapshots to a target's weak points. In multiplayer, you lose out on the time dilation effects, but if a player has the reflexes for it, sniper rifles can be remarkably flexible.

# M-13 Raptor

**Availability:** Found during "Priority: Sur'Kesh" (page 161)

The Raptor is a human version of a turian weapon developed for conflict on the low-gravity world Amar. Fighting at longer ranges than expected, the turians optimized a low-recoil semiautomatic rifle with a scope and issued it to their regular infantry; this created a hybrid weapon that was half assault rifle and half sniper weapon. Cerberus assigns the Raptor to Nemesis snipers.

# M-92 Mantis

**Availability:** Found during "Priority: Mars" (page 116)

The Mantis is a powerful sniper rifle able to take out most targets in a single shot. It's incredibly accurate at long range, but the rate of fire is slow. Manufactured by Devlon Industries, the Mantis is primarily used by police and planetary militia groups.

**Availability:** Found during "Priority: Palaven" (page 140)

The Viper is a semiautomatic, rapid-fire sniper rifle manufactured by Rosenkov Materials. Rosenkov developed a patented automated-release system that assists with thermal clip ejection, shortening the Viper's reload time. This rifle is popular with military snipers, who appreciate a long-range gun that can snap off multiple shots in the blink of an eye.

# Javelin

**Availability:** Found during "Rannoch: Admiral Koris" (page 243)

Called the Javelin by Alliance marines, this geth weapon holds a reservoir of ferrofluid, magnetically drawn into the firing chamber and expelled at lethal speeds. Like a high-pressure water jet, the ferrofluid cuts through nearly anything it hits with so much heat that it resembles a beam of light and causes terrible wounds.

# N7 Valiant

**Availability:** Collector's Edition

The Valiant is a sniper rifle tested by Alliance soldiers during a series of harsh survival exercises on the planet Kruljaven. This streamlined weapon employs a sophisticated fire-control system that improves accuracy by stabilizing the barrel during targeting. Although this comes at the cost of reduced capacity and rate of fire, most soldiers find the increase in precision and quick reloading time a worthy trade-off.

# M-29 Incisor

**Availability:** Found during "Tuchanka: Bomb" (page 344)

The Incisor is a sniper rifle designed to overload active defenses. Firing three shots with each pull of the trigger, the Incisor was initially advertised as having negligible recoil, although under real combat conditions, the second and third rounds frequently climb in difficulty. The noise of the burst is comparable to a single rifle shot in duration, making it no easier to locate the sniper by sound.

M-98 Widow

**Availability:** Found during "Priority: Thessia" (page 272)

Several research firms spent a considerable fortune trying to redesign the Widow sniper rifle. Their goal was to retain the geth weapon's considerable firepower while reducing its recoil so that the gun could be fired without breaking a nonsynthetic's arm. After much trial and error, one company finally produced a usable model rolled out to the galactic market.

The Alliance wanted to reduce the reload time of the original Widow Rifle, without sacrificing its stopping power. The solution was to increase the number of shots the gun could fire before it needed a fresh thermal clip. Heavy for a sniper rifle, the Black Widow's firepower more than compensates for its encumbrance.

HEAVY WEAPONS

Heavy weapons make a return to *Mass Effect 3*, with a twist. In single-player, heavy weapons are no longer selected prior to a mission; they are entirely situational and must be found and used in the field. They are typically located in places where judicious use of their power can make life much easier...and much harder if you miss your mark.

In multiplayer, all characters have access to the Cobra Missile Launcher, but ammunition for this weapon is limited and cannot be replenished midmission. For more details, see the Multiplayer chapter (page 370).

WEAPON MODS

Returning to *Mass Effect 3* is the ability to customize your guns with specialized modifications that boost various stats or add special melee attachments. Mods can be used to enhance a weapon in ways that may help cover for their deficiencies or complement a given play style. They are available for both single- and multiplayer and can be a deciding factor for survival in either mode. Generally, mods appear in both modes, but some mods are exclusive to one mode or the other. Certain effects present in single-player will not be in multiplayer. Mods are not universal; each weapon will have its own set to find and choose from.

During a first playthrough, it's recommended you focus on weapons you intend to use the most. There's only so much money to be made during an initial playthrough, and even imported Shepards may not have enough money to buy absolutely everything.

Similar to weapons, mods can be leveled up with successive purchases or pick-ups of a given mod, up to a maximum of Level 5.

ARMOR

It's inevitable that you're going to take a few shots before the fight's done, and the kind of armor you equip can determine whether you survive. The ability to customize Shepard's armor returns in *Mass Effect 3*, with players able to select separate pieces for the arms, legs, chest, shoulders, and head. In addition to the various sets that can be found piece by piece, there are special full-armor sets that have a series of special bonuses but otherwise cannot be customized in any way. Every piece or set of armor you obtain has its own stat boosts that can enhance your powers, your skill with firearms, or how hard you can take a swing at someone. Experiment with the various armor types and see what complements your play style the most!

*Mass Effect 3* has seen the most extensive set of changes and additions to combat of any game in the whole franchise. While still retaining typical RPG features such as experience points and character statistics, player skills are what drives success or failure during each encounter. Movement and combat are more visceral than ever. Shepard is more agile, more lethal at close range, and is more adept at maneuvering through the environment than before. Similarly, the enemy has seen the same dramatic improvements in ability and are more aggressive, actively flanking Shepard and his/her squad, even laying down suppressive fire to keep them pinned in place. Certain threats can even kill you instantly, regardless of your health and shield levels! To survive in single-player and multiplayer, you must be attentive to what's going on in front of you, and you must be able to navigate the environments smoothly, even while under fire.

## MOVEMENT

### Walking

Basic movement in and out of combat consists of walking, and it is possible to run while outside of combat.

### Storming

When in combat, you sprint forward with greater speed, sacrificing your ability to make sharp turns in order to get from one location to another. You can storm indefinitely; just make sure you know where you're headed if you're taking fire. It's possible to take a powerful enough hit that you are knocked out of your storm. This is potentially fatal, as you're still very vulnerable to incoming fire as you stagger!

If you storm at waist-high pieces of terrain, your character will usually automatically take cover once they reach it. However, by tapping the Storm button

just as you reach cover, you can actually vault over those obstacles in one smooth motion. This is especially useful for aggressive players, as it keeps your weapon pointed at the enemy while you advance.

### Evading

Previously in *Mass Effect*, your only real responses to getting shot at were to sprint to the nearest cover or fight back with your guns or special powers. If for whatever reason neither option was immediately available, you were somewhat out of luck. Now you can actually evade

in the direction of your choosing. Shepard can combat roll into cover or leap backward just as a powerful enemy takes a swing at him. This is also an amazing tool to use when flanking enemies in close-quarters combat. It's possible to bait certain enemies into melee attacks with long windups, roll just past them, and take them from their unprotected sides.

## TAKING COVER

A basic but vital part of combat, taking cover keeps you out of a battle while still giving you the ability to mark and engage targets and direct your squadmates (and their abilities across the whole squad) to relative safety.

Cover is not perfectly safe, however! Your guns can punch through cover, particularly with better mods equipped, and your enemies can do the same. Grenades can be lobbed to land next to you, prompting a hasty retreat or advance to safer pastures. Environmental hazards may prompt you to stay on the move. Enemies might be able to clip parts of you that are exposed outside of cover, or they could be in a superior position, attacking from elevated positions or flanking you to bypass your cover entirely. Remember that cover is only a temporary solution to danger in a firefight. Being observant and being a better shot with your guns and abilities is just as important.

In multiplayer, it is especially important to not get too comfortable behind any object you're hiding behind. Enemies are much more aggressive and will use their numbers to flank your position in hopes of taking you out.

### Cover Transitions

You have the ability to vault over pieces of cover, transition from one piece of cover to another, and shift from one side of cover to another.

Once in cover, you can strafe along the length of it to the left and right. If the cover changes in height, your character will change their stance accordingly.

Vaulting over cover allows you to quickly advance at the enemy or to another safe spot a little farther ahead of their current position, all without having to navigate around the current obstacle. Vaulting is one of the faster ways to leave cover, but it also makes you vulnerable to incoming fire.

Transitioning between pieces of cover is one of the safest and quickest ways to remain protected while under fire. It also simultaneously allows you and your squad to shift fields of fire to meet enemy reinforcements or sudden rushes on a different flank. Get to the far corner of any piece of cover, and if you hold your movement keys or analog stick in the direction the cover ends, an arrow will display where you will travel next when you press the appropriate button. You can also move out from a corner by pressing forward and following the command prompts, with your character swinging around the cover and moving ahead.

You can also transition to another part of the same piece of cover. If you're behind a crate that is suddenly flanked, you could engage the enemy from where you sit, but you'll still get shot up. However, by moving to the edge of the enemy's current position, you will transition to the crate's other side, keeping it between you and the flanking foe.

## On the Defensive

At some point, you will get hit by enemy attacks during the course of battle, and it's important to know what you need to watch for when it happens. Every character class has two meters to monitor: your shield meter and your health meter.

Your shields are intended to stop, or at least blunt, enemy assaults before they reach the armor and flesh behind them. They will drop precipitously under fire until you find cover. On higher difficulties, the shields last for a scant few seconds at best before the enemy starts chewing through your health. Pay attention to the status of your shields, and if you can spare a moment behind cover to let them recharge, do so.

Health is signified as a segmented red bar just underneath your shield indicator. The segments indicate limits to how much health will be regenerated after you spend time away from fire. To refill empty segments, you must use a Medi-Gel pack.

## CAMERA CONTROLS

A good soldier is an observant one. Keep your eyes open for anything or anyone you can interact with, either for conversation or pick-ups. When on combat missions, be thorough when scanning the world around you; this will help you locate more weapon and armor modifications, which you will definitely need if you want to survive the later battles. In co-op, holding the line against waves of enemies depends heavily on your ability to spot the enemy and catch them well before they've flanked you and your team.

## AIMING

When the shooting starts, you aim where your camera points. You can zoom in on targets for more accurate fire at range, but this costs you much of

your peripheral vision, depending on the weapon. With a sniper rifle, you're limited to the area displayed by the scope, and aggressive foes can and will flank you while you're focused elsewhere. Don't move while scoped unless you absolutely need to take down a threat while moving. Typically, it's best to stay moving as fast as you can between pieces of cover, as taking aim stops you from sprinting and slows you down, making you an easy target.

## ATTACKING

There are essentially three options you have when it comes to dealing with the enemy: using your guns, using your powers, and using your fists. These are elements that are familiar to most series veterans, but there are some things that have changed that are worth going over here.

### Guns, Guns, Guns

Using your weapons is as simple as pointing the camera where you want to shoot and pulling the trigger until the thermal clip needs to be ejected.

Guns can be fired with or without aiming down the sights, and there are actually good reasons to do either.

**From the hip:** While this is less accurate than aiming down the sights of a weapon, a major advantage is that you don't lose foot speed, and recoil is not as severe. Additionally, you don't lose any situational awareness that comes from aiming down the sights; you retain a clearer picture of what is going on around you. This is actually a solid engagement method at close range with any semiautomatic or fully automatic weapon.

### Aiming down the sights:

For medium- to long-range encounters, aiming down the sights of a weapon greatly increases your accuracy. If you're trying to land headshots, this is how you'll get the best results. Sniper rifles in particular benefit from this with their high-powered scopes. Aiming down the sights does have its drawbacks. You can't sprint while doing this, and your walking speed is reduced, as is the speed with which you can move the camera to aim at new threats. Recoil is more significant here, making sustained rapid-fire less accurate. You also lose situational awareness as the camera zooms in closer to your intended victim; this is further compounded for the longer-ranged zooms available to a sniper rifle. If the enemy is very close, avoid trying to sight in on them and either disengage and fall back or fire from the hip.

### NOTE

All weapons have less recoil when fired from cover.

It's important to know when to reload, when to switch to a new gun, and what gun to switch to. Generally, before any firefight, you want to have fully loaded weapons so you don't get caught unprepared if you come across the enemy.

## POWERS

Each class has a variety of active combat abilities that can supplement a well-rounded arsenal or even supplant one. Consisting of combat, Tech, Biotic, and ammunition, powers can cause different types of elemental damage, rip apart shields and barriers, and even rob enemies of their mobility.

### NOTE

Full lists of powers can be found starting on page 48 of the Squad chapter.

### COMBAT POWERS

**Example powers:** Concussive Shot, Adrenaline Rush, Frag Grenade

Combat powers are designed to break through armor and cause heavy health damage to targets. With the new combo system, combat abilities often act as the "detonator" that sets off the combo explosion. Others enhance player accuracy or survivability under fire. In the campaign and during multiplayer, it's a good idea to choose a character who specializes in these abilities to help finish any combos.

New to *Mass Effect 3* is the limited number of grenades available. Previously, it was possible to keep throwing Inferno Grenades indefinitely. Now grenades are powerful but limited in number.

### TECH POWERS

**Example powers:** Cryo Blast, Combat Drone, Tech Armor

Tech powers have some of the best utility values of all active powers. They can cause the largest number of effects on victims. Many Tech powers specialize in breaking down enemy shields and armor, which is rather important for Biotic users whose best effects are available after a target is stripped of its defenses. Other Tech powers specialize in defense, deploying defensive turrets, rendering players tougher to kill, or making them impossible to see. Tech powers often serve as a primer in a power combo, as the lingering effects of the elemental damage allows Biotic or combat powers to detonate and cause heavy damage to surrounding targets.

## BIOTIC POWERS

**Example powers:** Biotic Charge, Singularity, Stasis

Specializing primarily in breaking through barriers and the rules of physics, Biotic powers are powerful tools against unprotected targets but are stymied against shielded targets. The best Biotic abilities render targets completely unable to fight back, as they are lifted into the air or flung about by a gravitational singularity. However, Biotic powers need to have their targets stripped of special protection before they can go to work. Similar to combat powers, many Biotic powers serve as detonators in combos. Many Biotic powers have lingering effects that make it easy to set up Biotic combos. A squad heavy on Biotics will certainly not be lacking in power.

New to the Biotic skill sets are specialized explosives: the Lift and Cluster Grenades. As with the combat grenades, these are limited in number, and therefore should be used judiciously.

## AMMUNITION

**Example powers:** Cryo Ammo, Incendiary Ammo, Warp Ammo

These abilities appear as powers only in single-player; in multiplayer they take the form of special equipment that lasts for the duration of a mission and cannot be switched out. In both modes, ammunition enhancements are valuable skills in a fight. Not every class or character can use these powers, so their prevalence in a squad may not be very high. Nonetheless, having at least one or two ammo specialists can help cut through a variety of defenses.

Interestingly enough, almost every ammo power, save for Armor Piercing, can contribute to power combos as "sources" due to their lingering effects on targets.

### NOTE

In addition to all of the available powers in single-player, Shepard gets the unique **Unity** power, which uses a **Medi-Gel** pack to fully restore the health of the entire squad. These are limited, and reckless play can empty your inventory of the stuff very quickly. Make each use of Medi-Gel count!

## POWER COMBOS

In *Mass Effect 3*, powers can combo off of each other, leading to devastating explosions with large areas of effect. In single- and multiplayer, this encourages teams with a variety of Tech, Biotic, and combo powers to increase damage output. On harder difficulties, it's almost a requirement that players use combos extensively in battle to help whittle down the larger health pools that enemies possess. Every combo has two required elements: a source ability, and a detonator ability. These vary depending on the desired combo. There are four types of combos in the game, each with special side effects:

- » **Biotic Combo:** Biotic combos have the benefit of being able to occur regardless of the health levels of the targeted enemy; many others trigger only if the two powers combined are the killing blow on the victim. Biotic users with light loadouts for reduced power cooldowns can trigger combos in rapid succession, devastating clustered groups of enemies. Effective against Biotic barriers and armor.
- » **Flame Explosion:** This is a blast of flame that is highly effective against armor. It has the additional bonus of setting aflame any target within the blast radius, with a chance of causing panic on the victims. Panic is especially useful, as it keeps the enemy preoccupied. Any enemy caught in the blast now suffers from a fire damage-over-time effect.
- » **Electric Explosion:** A burst of electricity that tears apart the shields of anything within range, with a high chance of stunning a target. One of the more effective combos in the game, especially against Mechs and geth platforms. Unfortunately, it isn't always easy to have a group of shielded enemies fall within range of the explosion, but the chance to stun still makes it a choice combo to rely on. Like the Biotic combo, the electric explosion can be triggered without being the killing blow on a victim.
- » **Cryo Explosion:** This ice blast has a chance to freeze any target within the vicinity, leaving them vulnerable to shattering. For armored or shielded targets, the partial freeze will slow them down. Against armor, those affected by this blast will take additional damage to the armor layer, making this particularly effective against Mechs like the Cerberus Atlas, armored Reaper Cannibals, and geth platforms.

MELEE COMBAT

Inevitably, enemies will break through any carefully planned kill zones and positions you set up within, and they will be in your face, pounding you with their firepower or vicious melee attacks. Fortunately, you’re not entirely helpless when they get this close. *Mass Effect 3*’s melee combat gives players more options than before, making a character of any class a serious threat beyond guns and powers.

WEAPON STRIKES

In previous games, Shepard was limited to single strikes with whatever firearm was equipped at the time. This is now a three-hit combo that can stagger foes of equal size. Coupled with level boosts in the appropriate passive abilities, even this basic melee can be enough to flatten any basic foot soldier who gets too close. Certain weapon mods further enhance your melee strikes. A pistol mod adds the chance of an electrical stun effect to each swing, while shotguns can be affixed with a bayonet that provides a good boost to overall melee damage. Melee can now be performed from cover—players can swing at the closest enemy as they step away from their cover. Players can also perform these strikes from the edge of cover.

As useful as this is on single targets, it’s dangerous to rely on when multiple threats are in the area. Don’t get caught up in the moment and punch your way into an ambush.

## HEAVY MELEE

Performed by holding down the Melee button, these powerful blows actually change based on what class you play in both single- and multiplayer, but the end result is the same: a single, heavy damage strike that can kill a basic unshielded/unarmored enemy in one or two hits. Nonbiotic users equip their omni-tool and form a disposable glowing blade that stabs straight into their victim or, in the case of Engineers, releases flame from the tool.

The speed and effect of the heavy melee changes between classes. Soldiers have the slowest heavy melee strike, but it is the most powerful. Infiltrators and Engineers have a slight area of effect. The Vanguard heavy melee is the fastest but also the least powerful. Sentinel heavy melee strikes are slower but more powerful. Adept heavy melee hits anything surrounding the user but leaves them momentarily vulnerable.

As powerful as the heavy melee is, the windup to the actual strike is enough that attentive foes can counter with their own melee strike. At best, you'll simply trade hits, but if the enemy is faster, they can stagger you out of the heavy melee, leaving you vulnerable to follow-up attacks!

## RUNNING MELEE

Holding down the Melee button while storming will cause you to use a heavy melee strike while on the move. This ability works especially well for Vanguard's with their unique storm punch melee attack, in conjunction with Biotic powers like Nova, Shockwave, and the Biotic Charge.

## GRAB

Arguably the most exciting addition to the melee combat, characters hiding behind low pieces of cover can actually reach across the cover, grab an unsuspecting enemy, pull them over, and finish them with a single decisive killing blow. Enemies tend to back away from cover if you storm them, but keep your eyes open for the icon indicating a grab is possible. A free kill for no ammo cost or power cooldown is always welcome.

## TACTICS

It's one thing to know about all the tools at your disposal; it's another to use them when it counts the most. The following battle tactics are mentioned often as potential approach methods to every major encounter in the game. While not every approach is feasible for every firefight, these are generally good tactical concepts to keep in mind for both the main campaign and the online multiplayer. Good use of these tactics can help maximize the effectiveness of your weapons and powers.

### COVER, FIRE, AND MANEUVER

This is maneuver warfare 101, an easy and relatively safe response to any ambush or major set piece. It requires little direct intervention in what your squad does beyond any special abilities you wish for them to use; they will default to remaining close to you as you advance on the enemy.

As soon as you make contact with the enemy, try to take cover.

When it appears safe, pop up from cover and deal with what you can. Return to cover if enemy fire gets too hot.

Move to new positions as necessary. This is simple. The real test is that of execution, and what powers are available to facilitate this approach.

## CHARGE!

This variation of the above tactic favors highly aggressive Vanguard and Infiltrator classes. The goal of this tactic is to close range with the enemy as quickly as possible, by any means necessary. Typically, it is best handled on lower combat difficulties, but it can still be fairly viable even on higher difficulties as long as the player is a proficient killer and the odds aren't too big.

You need to close range with the enemy before they can set up a coordinated defense against your assault, catching them just as they arrive via shuttle or drop pod. Shotguns, SMGs, and powerful pistols are the weapons of choice here; you can overwhelm enemy defenses with a combination of bullets, powers, and melee abilities.

Frequently pause the game to properly direct the use of your squad's abilities; this helps your chances of survival. In multiplayer, this tactic is much less useful, as you're not as tough to kill and don't have a convenient way to slow the action down to plan things out accordingly.

## LEAPFROGGING

Similar to the first tactic, leapfrogging is something that is easier to coordinate in single-player, particularly when fighting toward a specific objective. In multiplayer, you may not have the time to try something like this on the attack, but you can try something similar during a retreat. In general, leapfrogging works best in corridors or otherwise narrow battlefields where there is not much room to maneuver to your enemy's flanks.

Send your squadmates to positions ahead of you. Cover them as they advance to make sure they don't get held up or downed on the way to cover.

Once they are established in their new positions, wait until it's safe and advance either to them or to a position farther ahead of them. Your squadmates should continue to engage hostiles as they appear, hopefully distracting their attentions away from you. Repeat this until you've reached your objective or finished off the enemy.

During multiplayer games, the AI outnumbers the player squads by a significant amount, and therefore you can expect to be making tactical retreats fairly often. Similar to being on the offensive, the point of this is that nobody in the squad moves without being covered by others. On the retreat, having the entire team turn its back to the enemy means that everyone is getting shot in the back uncontested. A little bit of discipline makes life easier for everyone!

## FLANKING

By far one of the most important tactics in combat is to strike the enemy's flanks while their attention is directed elsewhere. You can accomplish this in many different ways.

Basically, you want members of your squad in a static position, holding it and doing their best to maintain the enemy's attention.

Any side routes the enemy isn't covering are your flanking routes. Using cover, try to remain unnoticed for as long as possible before beginning your assault. It's an excellent way to score grab kills in both single- and multiplayer. This works especially well with Infiltrators, as their Tactical Cloak powers allow them to remain invisible as they rush to the enemy's flank. Other powers, like Decoy or Combat Drones, can further distract the enemy and keep their attention focused anywhere else but right behind them until it is too late.

## HOLD AND SNIPE

Essentially, once combat begins, ensure you're in good cover and stay in place while taking shots at enemies as they break cover. Not the most glamorous method, but there's still a lot you can do with this conservative approach.

Setting up a kill zone means positioning the squad so that every person has good sight lines on positions the enemy must advance through to reach you. In addition to this, it means that the squad can also cover potential flanking routes, meaning that nobody can get close to you without taking a few slugs first. This can get much more difficult in multiplayer, where the objectives and enemy drop points are much more fluid. This is a solid defensive tactic, but try not to get too comfy in one spot. Be ready and willing to shift to new positions when it's called for.

Flanking isn't just about getting around to the side or behind the enemy; it's about getting superior position in general. For instance, if there is a high ground in any given battle, you must do what you can to take it for yourself, while denying the enemy access to it. Having the high ground facilitates and guards against flanking maneuvers and allows you to chip away at enemies from on high, over the pieces of cover they are using below you.

## THE ENEMY

Now that you know how to prepare for a fight and what to do once you're actually in the middle of one, it's time to see what you're up against.

### CERBERUS

While the Reapers are the greatest threat to the entire galaxy, Cerberus's actions throughout the conflict, from start to finish, cannot be underestimated. The Illusive Man's forces have dallied with extremely dangerous technologies derived from the Reapers to enhance themselves to better fight the forces of the Citadel and further weaken already-failing alliances. Tactically proficient and very well armed, Cerberus forces provide some of the most intense cat-and-mouse battles throughout the game.

### ASSAULT TROOPER

**Armament:** M-25 Hornet Submachine gun, electrically charged shock stick, frag grenades

**Threat Level:** Low to medium

Being the most basic soldier of the Cerberus forces does not make Assault Troopers harmless. On the contrary, their aggressiveness tends to place them on your flanks while driving you out of cover with well-placed grenades. The lack of shielding makes them susceptible to Biotic attacks, but they possess the uncanny ability to combat roll out of harm's way, evading Biotics and Techs with alarming frequency in the higher difficulties.

## CENTURION

**Armament:** M-96 Augmented Mattock Assault Rifle, electrically charged shock stick, smoke and frag grenades

**Threat Level:** Medium to High

Larger and tougher than Assault Troopers, Centurions have armor with shielding, making them tougher targets to kill. The semiautomatic rifles they wield possess great stopping power at any range, and as always, they will try to flush out stubborn players with frag grenades. What makes the Centurion a real threat is the smoke grenade, which can cover wide swaths of the battlefield with obscuring clouds to disguise potential flanking maneuvers or ambushes.

## GUARDIAN

**Armament:** M-358 Talon Pistol, ballistic shield

**Threat Level:** Medium

Slow-moving, the Guardians do not seem initially too dangerous when compared to other Cerberus units, until you notice just how resilient their ballistic shields really are as they march through barrages of fire, get close to you or a squadmate, and start beating them senseless with those shields. The heavy shields offer Guardians excellent protection from threats directly in front of them, save for the view slot carved into the shield. Sniper rifles or any sufficiently accurate weapon can put rounds through the slot for headshots on the Guardian. Biotics can use a wide variety of powers such as Cluster Grenades, Singularity, and Pull to quickly get the shield away from them.

## COMBAT ENGINEER

**Armament:** M-5 Phalanx Pistol, sentry turret, repair tools

**Threat Level:** High

By itself, a Combat Engineer is not intimidating. What it can bring to the battlefield, however, is very intimidating. The sentry turrets they can deploy can suppress a squad in a very short time, causing extreme damage on exposed characters. Their shields and armor also ensure a turret can survive concentrated fire, but even worse, an Engineer can use their repair kits to keep them up and running, even while under fire! In a battle consisting of multiple units, target the Engineers first, as their turrets and repair abilities can shift the battle dramatically against you. Be mindful of their presence when the Cerberus Atlas is in play, as Engineers like to constantly repair their shields and armor.

## NEMESIS

**Armament:** M-13 Raptor Sniper Rifle

**Threat Level:** Medium to high

Fast on their feet and accurate with their rifles, the Nemesis is aptly named, hounding Shepard and any squadmates who stay still for too long. Nemesis snipers tend to shoot any part of a target that is even remotely exposed, a dangerous habit when combined with a height advantage. Fortunately, they aren't very tough once their shields are exposed. If possible, have a squadmate hit a Nemesis with Cryo Blast to slow them down; even if their shields are still up, it will help with drawing a bead on them. On higher difficulties, the damage caused by a Nemesis is substantial, making them priority targets if the enemy is still at a decent distance away from you.

## PHANTOM

**Armament:** Sword, high-powered arm cannon, Biotic defenses, tactical cloak

**Threat Level:** High

Arguably the most dangerous opponent for its size, Phantoms employ heavy use of their tactical cloaks to slip around a player's view and strike their flanks. Their Biotic barriers are incredibly resistant to many Techs, combat powers, and gunfire. To make matters worse, Phantoms can literally brush aside incoming powers and fire. Their swords are further cause for headache, as they can deflect incoming fire and are an instantly lethal melee weapon up close. It is possible to shoot the sword out of a foe's hand to take away their instant-kill ability, but it's difficult to manage given how much Phantoms like to move. Slow them down with Cryo Blast, or stun them with Disruptor Ammo or Electric Explosion combos if you can; they can't be allowed to get close or stay close for very long. Shredder and armor-piercing mods are also viable tools against a Phantom, as a lucky shot can pierce through them and shatter their sword.

## ATLAS

**Armament:** Homing missile launcher, heavy cannon, antipersonnel claw

**Threat Level:** High

Atlases are powerful heavy mechs that are resistant to almost all forms of damage to one degree or another. Once an Atlas drops onto the field, your priorities must switch accordingly. Fortunately, Atlases are quite slow, making it easy to line up everything you have. Atlases have two large vulnerabilities to exploit: the thruster mounts on the back of the unit and the cockpit canopy. Ambushing an Atlas from behind is a sure way to cause heavy damage before it turns its attention to you, but if you're clever, you'll have squadmates on the other side, exploiting that same weakness. The canopy glass can actually be shattered with enough concentrated fire, exposing the pilot to direct damage. Killing the pilot leaves the unit open for hijacking, and on higher difficulties this is one of the best ways to deal with an Atlas and its reinforcements.

## THE REAPERS

The Reapers aren't merely the collective consciousness found within each of their enormous cruisers and dreadnoughts that are pounding the fight out of every planet they've attacked. Every race they've struck has had members harvested, indoctrinated, and "improved" through Reaper technology. Without mercy, and barely any sense of self-preservation, Reaper ground forces consume the best a species has to offer and turn it against them.

## HUSK

**Armament:** None

**Threat Level:** Low to medium

Former humans, Husks were originally believed to be a geth creation intended to intimidate humanoid species in battle, but it is now apparent that the Reapers produce Husks as basic ground troops. Husks can be harmful in melee combat but are otherwise not very dangerous alone or even in small groups. What truly makes them threatening is their ability to engage players in a melee hold that leaves them open to attack from any direction. Deal with Husks quickly, as they are a distraction to more dangerous units. Incendiary powers and Biotics are especially effective at stopping their mindless rushes.

## CANNIBAL

**Armament:** Arm cannons grafted onto their flesh

**Threat Level:** Medium

The fate of batarians who fell before the early waves of the Reaper invasion, Cannibals are fairly proficient in close- and medium-range combat. They can absorb a surprising amount of damage before going down. They become more dangerous as their allies fall around them. Cannibals absorb the corpses of fallen enemies and allies alike, gaining a chitinous layer of armor that serves to further increase their resilience. Don't let Cannibals get free meals—make them pay for remaining stationary long enough to consume a corpse. If one is armored, it is possible to freeze or incinerate the new armor layer and make them more vulnerable to incoming fire.

## MARAUDER

**Armament:** Phaeston Assault Rifle

**Threat Level:** Medium-High

Marauders are turians that have fallen during the assault on their homeworld Palaven. They are similar to the Cerberus Centurion, being more resistant to incoming fire thanks to their shields and being more dangerous at range due to their accurate assault rifles. Marauders serve as the combat support unit for Husks and Cannibals, having a unique ability to improve those units from a distance, forcing them to grow additional armor layers for protection. While doing this, a Marauder is very vulnerable, so line up some headshots or close the distance and use heavy melee if it's safe. You want to burn them down before they enhance too many Husks or Cannibals.

## BRUTE

**Armament:** Grafted arm blades, super-strength

**Threat Level:** High

A hybrid of turian intelligence and krogan physical strength, Brutes are fast, strong, and smart enough to know how best to use these gifts. Thickly armored, Brutes can bound through walls of fire and survive to take huge swipes at players with their arms. Be especially careful at close range with a Brute, as they can grab careless players and kill them in a single stab through the gut! Your best bet is to use their incredible speed against them, dodging out of the way of their charges, and lighting them up with any armor-breaking powers at your disposal. Sniper rifles are also good for hitting their weak spot—the turian head grafted onto the torso. However, it will take some skill to hit that target while a Brute is on the move.

## RAVAGER AND SWARMER

**Armament:** Heavy Cannons

**Threat Level:** Medium to high

Ravagers present two major threats to players. The first is their high-powered cannon shots, which are accurate and have decent area of effect. At range, a Ravager is more than capable of melting shields and barriers and tearing apart what lies beneath. Once you see the blue laser sights of a Ravager fall onto your character, find cover or pay the consequences. The other threat Ravagers provide come in the form of Swarms, buglike enemies that are carried in the sacs of flesh hanging from the Ravagers. Once these burst open, the bugs streak toward any nearby victims. While not especially dangerous by themselves, Swarms do prevent shields and health from regenerating. Combine this with everything else the Reapers are throwing your way, and you can find yourself dead very fast.

## BANSHEE

**Armament:** Biotics

**Threat Level:** High

Probably one of the scarier units the Reapers possess, Banshees are the unfortunate husks of defeated asari known as Atdat-Yakshi, living up to their namesake with ear-piercing howls. They possess immense Biotic power, their barrier being some of the strongest defenses in the game, even against attacks meant to defeat Biotic barriers. Banshees seem slow at first as they hover toward you, but they suddenly close the gap with lightning-fast Biotic dashes that have them dancing through incoming fire and into melee range. Do not let them get so close, as they can finish Shepard or any squadmate in a single melee strike. It is possible to save a squadmate caught in this lethal attack by causing enough damage to the Banshee, forcing them to drop their victim. Banshees are not limited to close-range combat. The Biotic blasts they fling can rapidly drain shields and prevent health from regenerating.

## HARVESTER

**Armament:** Heavy cannons grafted to their heads

**Threat Level:** Low to medium

Like dragons, Harvesters sweep through the skies in search of victims to take back to Reaper processing centers. These monsters are not regularly occurring enemies throughout the main story, but they do show up during certain events. The gravest threat they present comes from the cargo they carry. Whenever a Harvester appears, drive it away or destroy it quickly by exploiting its weakness to anti-armor powers, lest they unload their troops into the fight.

## THE GETH

The geth are enigmatic synthetics currently in possession of the quarian homeland, Rannoch. Created by the quarians to act as their servants, the geths' eventual rise as a collective intelligence came as a surprise to their creators, who tried to destroy them preemptively, only to fail. It has come to light that the geth that once served the Reaper Sovereign have been considered "heretics" by another faction of geth. Despite this split in their collective structure, the geth are not conflicted when it comes to defending themselves from organic hostility. While not as dynamic compared to the Reaper or Cerberus forces, the geth make up for it with brutal precision and efficiency in combat.

## GETH TROOPER

**Armament:** Pulse Rifle

**Threat Level:** Low to medium

A lone Geth Trooper is not particularly dangerous. It is slow to move, has a large head vulnerable to sniper rifles, and lacks any form of protective shielding, so a Trooper can be fodder for any class. However, when encountered in groups, you will find that Troopers focus their fire on single targets with great accuracy, able to burn down an unprotected victim in seconds. Techs such as Overload or Sabotage work very well against Troopers, allowing you to disrupt their advances with ease.

## GETH ROCKET TROOPER

**Armament:** Rocket Launcher

**Threat Level:** Medium

A step up from the Trooper platform, Geth Rocket Troopers provide heavy fire support for other geth platforms. The homing rockets they fire are difficult to evade and can blast players out of cover and expose them to other assaults. On higher combat difficulties, Rocket Troopers can fully strip away shielding or bring a player to critical health in one shot, so keep an eye out for the projectiles streaking toward you and find good protection.

## GETH HUNTER

**Armament:** Plasma Shotgun, tactical cloak

**Threat Level:** Medium to high

Using their cloaks to get close to their selected targets, Geth Hunters can do astounding levels of damage with one charged shot from their plasma shotguns. In the heat of battle, it's easy to miss cloaked Hunters among the visual clutter until it's almost too late to react. If you suspect Hunters are near, use area-of-effect abilities to break their cloak. Being shielded makes Hunters tough targets, so bring Disruptor Ammo or characters with Overload to help deal with them. Unchecked, Hunter teams can be murderous.

## GETH PYRO

**Armament:** Flamethrower

**Threat Level:** Medium

Boasting a layer of shielding and an armor layer, the Geth Pyro can be a close-quarters powerhouse. Its flamethrowers can bypass low cover, shields, armor, and barriers with equal ease. If you see a Pyro closing in, focus everyone's attention on it, particularly on higher difficulties where you simply will not survive a sustained burst from their weapons. Fortunately, Pyros have one very glaring weakness: the fuel tanks on their backs. A use of Overload or a well-aimed shot from a high-powered gun can puncture the tank and lead to a devastating explosion that can heavily damage or kill nearby geth.

## GETH PRIME

**Armament:** Plasma Cannons, combat drones, defense turrets

**Threat Level:** High

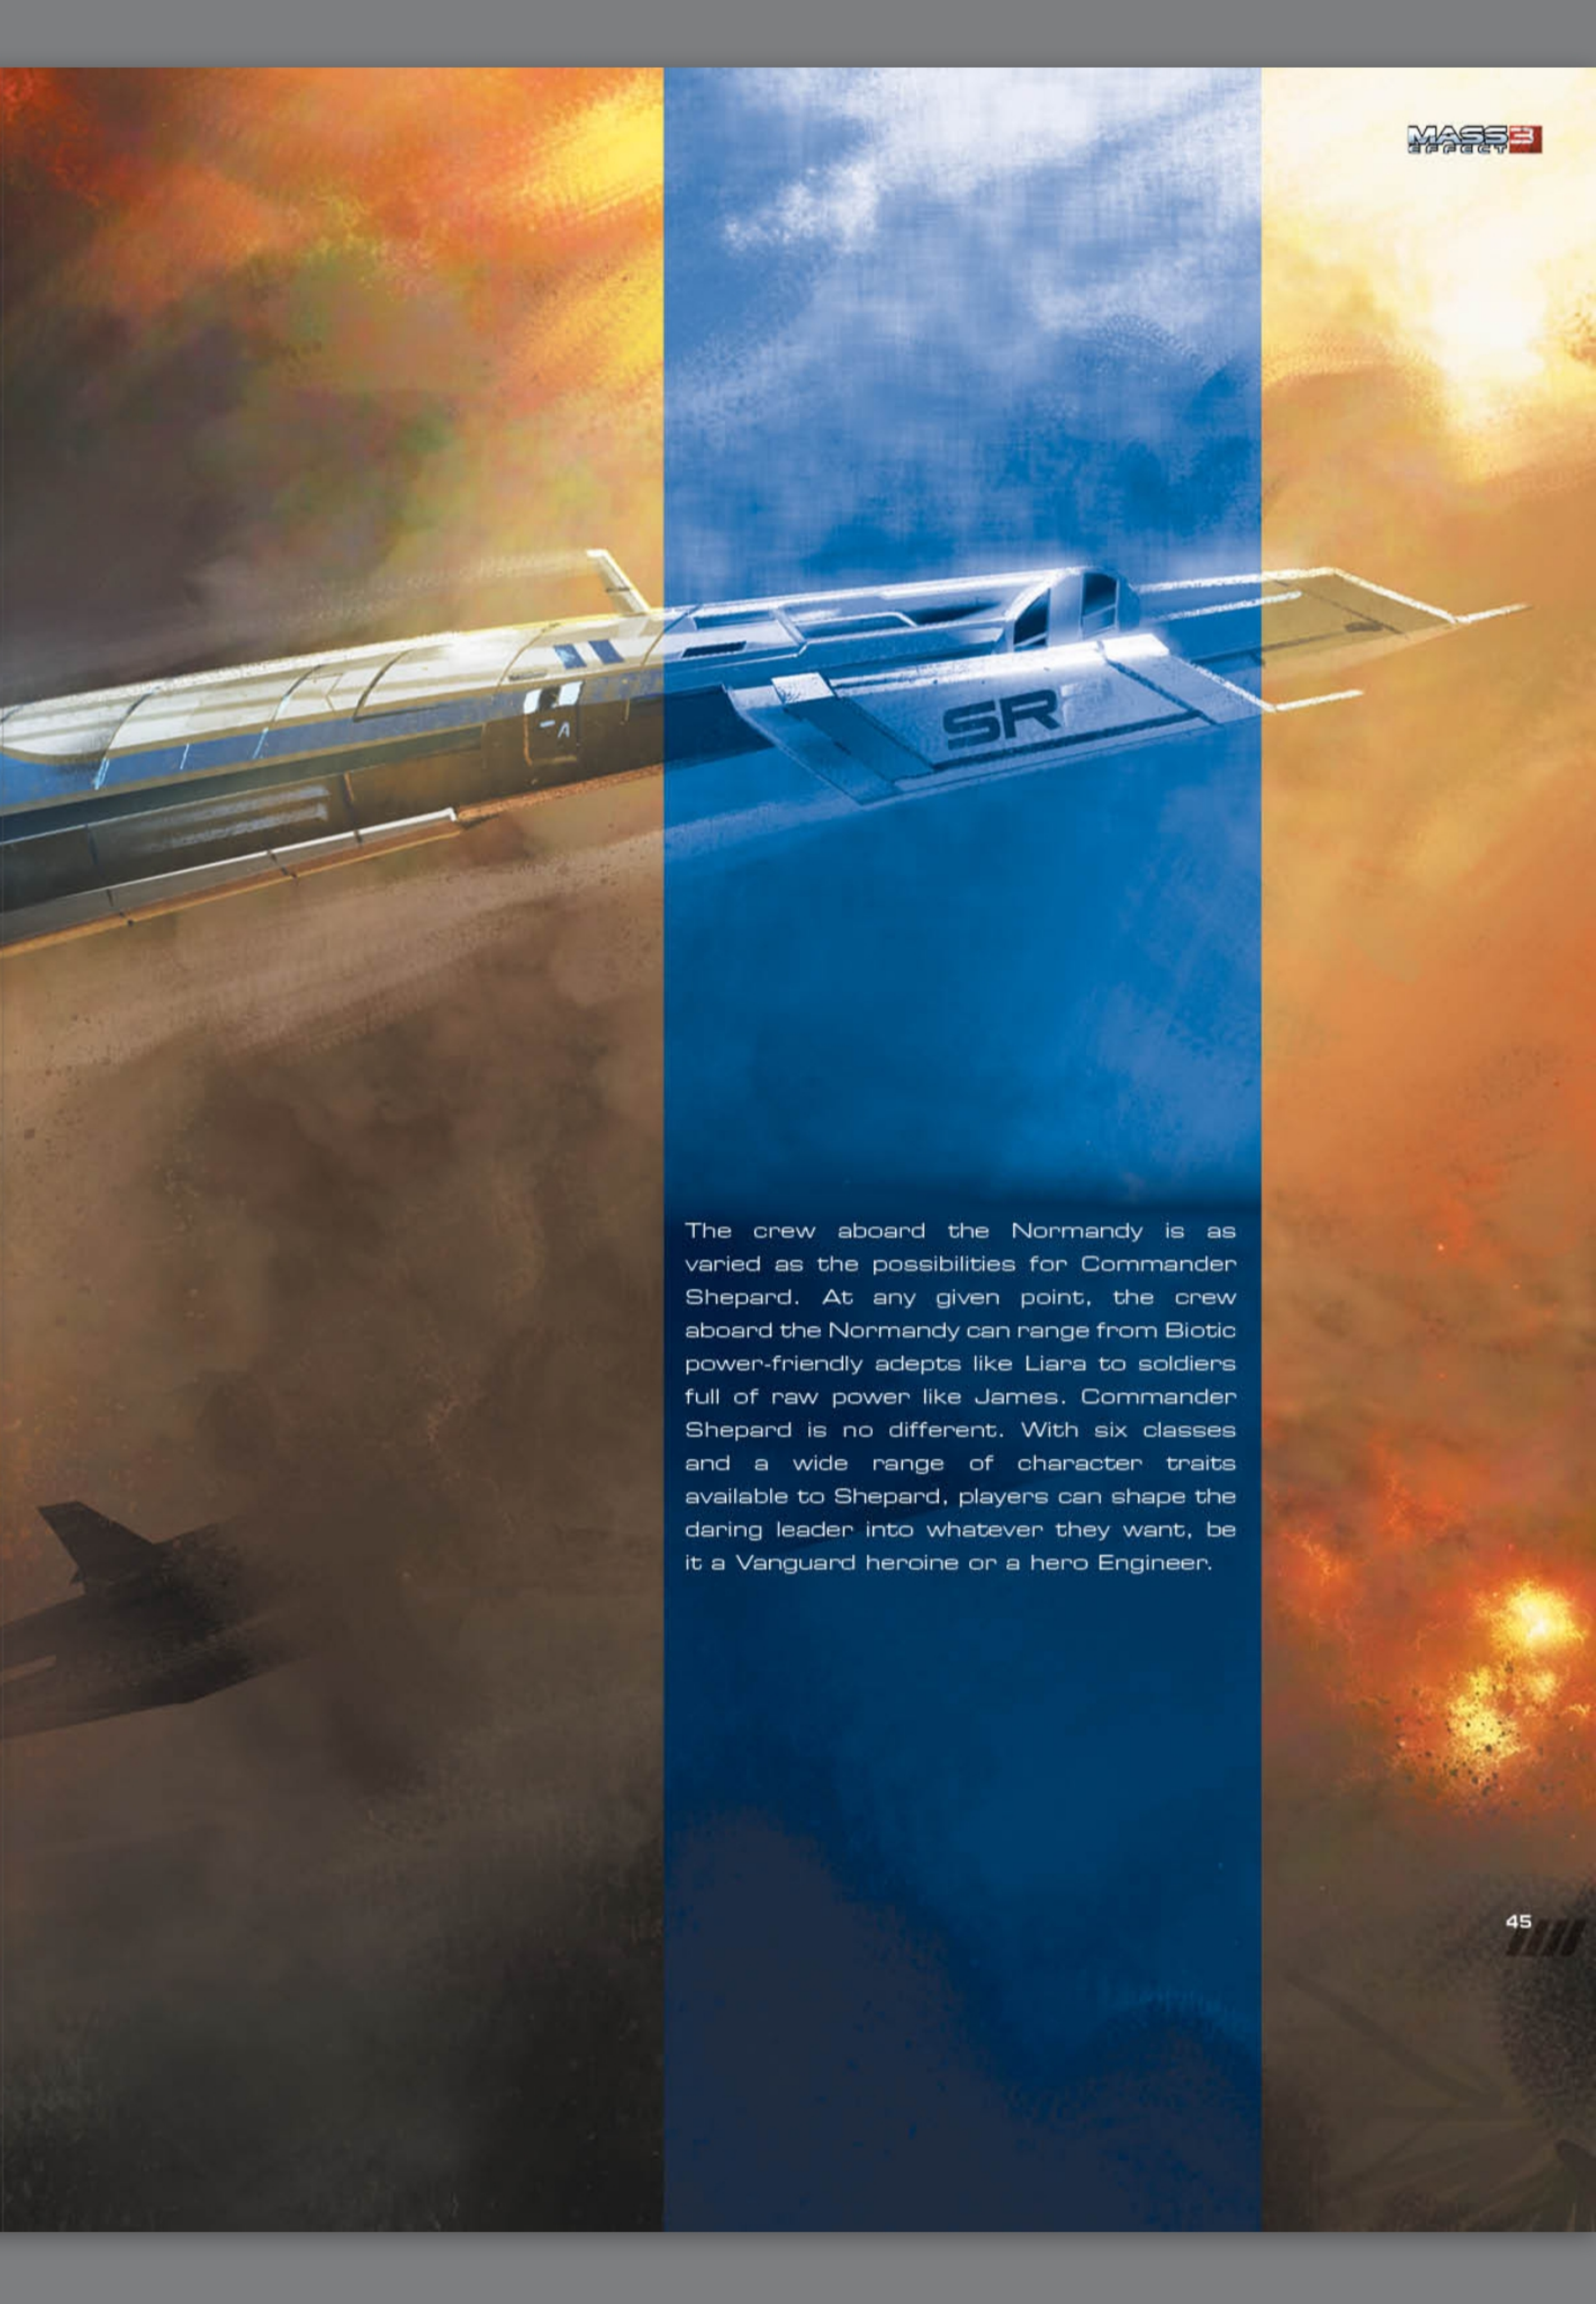

While slower than the other geth, the Prime platforms are powerhouses, able to wade through heavy fire while delivering punishing barrages. The heavy plasma cannons a Prime is armed with are bad enough, but their ability to deploy combat drones and defense turrets turn a Prime into a one-geth flanking machine. It is not surprising to see turrets deployed behind Shepard in order to bypass any hard cover, while the Prime continues to march forward, laying down plasma fire and sending its combat drone out to harass the Spectre. The dual layers of shields and armor protection makes taking down a Prime a tough prospect. It's best to keep them at a healthy distance, if only to give yourself a chance to better react to incoming fire.

# THE SQUAD

The crew aboard the Normandy is as varied as the possibilities for Commander Shepard. At any given point, the crew aboard the Normandy can range from Biotic power-friendly adepts like Liara to soldiers full of raw power like James. Commander Shepard is no different. With six classes and a wide range of character traits available to Shepard, players can shape the daring leader into whatever they want, be it a Vanguard heroine or a hero Engineer.

# THE SQUAD

The crew aboard the Normandy is as varied as the possibilities for Commander Shepard. At any given point, the crew aboard the Normandy can range from Biotic power-friendly adepts like Liara to soldiers full of raw power like James. Commander Shepard is no different. With six classes and a wide range of character traits available to Shepard, players can shape the daring leader into whatever they want, be it a Vanguard heroine or a hero Engineer.

## IMPORTING SAVES

Players who have a long standing history with the *Mass Effect* franchise can import a game save from *Mass Effect 1* or *Mass Effect 2*. Doing so will import the various moral decisions you've made across previous *Mass Effect* games. Additionally, you will also import whatever characteristics you previously had for Commander Shepard.

For that reason alone, you may be able to begin the game with a Shepard build you've already become accustomed to. If so, then feel free to skim the section below and use it as much (or as little) as you need. Seasoned veterans may still want to use it for playthroughs with new builds or when playing through the game a second or third time.

Even if you feel comfortable with your particular build of Commander Shepard, go to the specific character sections, beginning with Ashley Williams, later in this guide. There you will learn everything you need to know about a crewmate's powers and how to romance them, and even learn two build suggestions for each character.

### NOTE

With so many powers and bonus powers available, it's impossible to account for the amount of build combinations in the game. For that reason, we've narrowed it down to two build suggestions per class and per character.

The same goes for imported games. There are far too many variables to account for both *Mass Effect 1* and *Mass Effect 2*, not to mention the numerous downloadable content (DLC) packages released, so we've compiled a quick list of what is assumed as per *Mass Effect 3*.

## MASS EFFECT 1

The list below describes the starting parameters if you've never played *Mass Effect 1* or if you're importing a game save without *Mass Effect 1* data.

- » Garrus was recruited.
- » Wrex was recruited.
- » The colony on Feros was not saved.
- » Shiala, the asari taken by the Thorian on Feros, was killed.
- » The rachni queen on Noveria was killed.
- » Wrex died on Virmire, killed by Shepard.
- » Shepard did not have any romance.
- » The Council died, and the Destiny Ascension was destroyed.
- » Udina was named Councilor.
- » For all side content (DLC), the assumption is that you did not see the content or complete optional plots.

## MASS EFFECT 2

The list below describes the starting parameters if you've never played *Mass Effect 2* or if you're importing a game save without *Mass Effect 2* data.

- » Shepard is not assumed to have completed any loyalty missions. As a result:
- » Shepard did not complete Mordin's loyalty mission and never had the chance to save or destroy the genophage cure data.
- » Tali was exiled by her people.
- » Shepard did not have any romance.
- » Zaeed and Kasumi were never recruited.
- » Mordin is alive.
- » Garrus is alive.
- » Grunt was never woken up from the tank and is never mentioned.
- » Jack died during the Suicide Mission.
- » Tali was recruited and is alive.
- » Tali never romanced.
- » Samara was never recruited. She fought her way off of Illium and was later killed by Morinth.
- » Thane died during the Suicide Mission.
- » Miranda is alive.
- » Jacob is alive.
- » Legion was never reactivated and does not have the name Legion as a result.
- » Shepard destroyed the Collector base rather than turn it over to Cerberus.
- » The only Normandy crew members who survived the Suicide Mission were Joker and Chakwas. Yeoman Chambers, Ken, Gabby, and all other *Mass Effect 2* non-squad crew are dead.
- » Shepard did not complete optional N7 missions or other special assignments (Citadel missions).
- » Shepard did not complete Arrival, Overlord, or Lair of the Shadow Broker DLC (but the events of Arrival and Shadow Broker took place offscreen—the batarian system was still destroyed, and Liara is still the Shadow Broker).

### NOTE

The two lists above describe the default conditions to any new *Mass Effect 3* player.

# COMMANDER SHEPARD

Commander Shepard was born on April 11, 2154, and has been a lifelong Alliance soldier. After serving on the SSV *Normandy* under Captain Anderson, Shepard later became the first human to join the Spectres. While working as a Spectre, Shepard foiled another Spectre, Saren, as he attempted to betray the Alliance Systems to the Reapers.

Shortly thereafter, Commander Shepard was killed in action, only to be revived by Cerberus under the Lazarus Project. Shepard once again took control of the *Normandy*, recreated as the *Normandy SR-2*, and foiled the Collectors as they worked in conjunction with the Reapers.

Now, the Reapers have brought the fight to Shepard. Having fallen out of grace with the Alliance, Shepard now serves in the Alliance but has been stripped of his Commander rank.

## POWERS

### FITNESS

Put on some muscle and become fearless in close-quarter combat. More melee damage. More health and shields.

**Rank 1—Health and Shield Bonus:** 15%;  
Melee Damage Bonus: 15%

**Rank 2—Durability:** Increase health and shield bonuses by 10%

**Rank 3—Melee Damage:** Increase melee damage by 20%

**Rank 4a—Melee Damage:** Increase melee damage by 30%

**Rank 4b—Durability:** Increase health and shield bonuses by 15%

**Rank 5a—Melee (Increase):** Increase melee damage by 75% for 30 seconds when an enemy is killed by heavy melee

**Rank 5b—Shield/Barrier Recharge:** Decrease shield-recharge delay by 15%

**Rank 6a—Melee Synergy:** Increase melee damage bonus by 30%; increase power damage by 30% for 20 seconds after an enemy is killed by heavy melee

**Rank 6b—Fitness Expert:** Increase health and shield bonuses by 25%

### Analysis

Since all six classes for Commander Shepard share similar passive Fitness power, we're including an overview of this power here, rather than in every class section. The Fitness power grants all versions of Shepard a general health and shield/barrier increase. Additionally, at upgrade ranks (Ranks 4 through 6), you can add melee increases. While these upgrades may only appeal to players who will use Commander Shepard in close-quarter combat, consider selecting at least one of the three melee upgrades for added melee damage potential.

However, the bonuses for Fitness are not the same for each class. For Rank 6a, some classes get weapon damage, some get power damage, the Sentinel gets increased damage reduction, and the Vanguard gets a bonus to Biotic Charge. The Sentinel has a unique bonus for Rank 5a. The Engineer gets a unique bonus for Rank 6b. In the end, make your rank upgrade choices based on the type of build you'd like to create.

# ADEPT

Adepts are Biotic specialists, capable of disabling and killing enemies with raw Biotic power. They are outfitted with L5x implants that can spawn a micro-singularity, damaging enemies and pulling them into the air.

In battle, Adepts are strong, capable, power-heavy warriors with a talent for power combinations. Regardless of what kind of Adept build you eventually become, be sure to invest in Singularity. Every Adept player can benefit from this power, even at its most basic. But when upgraded fully, Singularity is a benefit to every squad. It is one of the few powers that can serve as a source power, inflict damage, and disrupt enemies in battle. This power should be the base of all Adept builds.

In order to keep your powers charged and ready to fire at a high rate, keep your weapon loadout low. Select one or two weapons at most (like an SMG and pistol) to keep your loadout weight low, and keep your power recharge speed as close to 200 percent as possible.

## POWERS

### SINGULARITY

Create a sphere of dark energy that traps and dangles enemies caught in its field.

**Rank 1—Recharge Speed:** 4.5 sec.; Duration: 4 sec.; Radius: 1.5 meters

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration and Radius:** Increase Singularity's hold duration and impact radius by 20%

**Rank 4a—Duration:** Increase Singularity's hold duration by 30%. Additional enemies can be lifted before Singularity fades.

**Rank 4b—Radius:** Increase impact radius by 25%

**Rank 5a—Lift Damage:** Inflict 20 damage per second to lifted targets

**Rank 5b—Recharge Speed:** Increase recharge speed by 30%

**Rank 6a—Expand:** Expand the Singularity field by 35% for 10 seconds

**Rank 6b—Detonate:** Detonate Singularity when the field dies to inflict 300 damage across 5 meters

#### Ranks 1 through 3 Analysis

Singularity may be an Adept's greatest power. This lasting effect can be used to flush out enemies from behind cover and lift them into the air (when upgraded properly), rendering them helpless, and it can even function as a source power to create explosive power combinations. At Rank 3, a single foe can be rendered harmless for up to nearly 5 seconds. Better still, that's nearly 5 seconds that Singularity can serve as a source power. Even though you can stop at Rank 3 and have a significantly useful power, consider upgrading beyond this rank. Singularity should be a part of every Adept build.

#### Rank 4 Analysis

Rank 4 offers two very useful potential upgrades. Either increase the length of Singularity's duration and keep enemies suspended in the air longer (Rank 4a) or widen its reach by increasing its radius (Rank 4b). Both are worthwhile upgrades, but Rank 4a is slightly more useful since it will allow you to pick up even more enemies with a single blast. Upgrade to Rank 4 and unleash a Singularity blast near a crowded area to create a bottleneck for attackers. Even if you don't manage to get multiple enemies in the blast, other enemies will be forced to reroute since the upgraded Singularity will last longer.

#### Rank 5 Analysis

If you plan on using Singularity often, perhaps to create multiple explosive power combinations, then select Rank 5b. This will increase Singularity's recharge speed and decrease your waiting time between blasts to less than 6 seconds. That means that you could potentially catch enemies in a massive explosion every 6 seconds. If you want to focus on inflicting damage, then select Rank 6a. This will add 20 points of damage per second for the duration of Singularity. If you chose Rank 4a, then that's an extra 120 points of damage.

#### Rank 6 Analysis

At Rank 6, you can expand the Singularity's field by 35 percent for 10 seconds. If you've chosen upgrade Rank 4b, then your Singularity field will be 2.18 meters around. Rank 6a will expand on those 2.18 meters by 35 percent for 10 seconds. By making Singularity last longer and reach farther, you can create countless problems for groups of enemies. Your other option at Rank 6 is to detonate Singularity when the field dies, inflicting 300 extra points of damage across 5 meters. Not only does this remove the need for a detonator power to be added in order to detonate Singularity, but it also reaches farther and causes a decent amount of damage. If you chose Rank 5a, then you could potentially inflict up to 420 damage with one Singularity blast.

## WARP

Rip your enemy apart at a molecular level. Stop targeted enemy from regenerating health. Weaken armor.

**Rank 1—Recharge Speed:** 8 sec.; Damage: 250; Duration: 10 sec.

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Detonate:** Increase force, damage, and impact radius of combo detonations by 50%

**Rank 5a—Lasting Damage:** Increase damage by 40%; increase duration by 60%

**Rank 5b—Expose:** Increase weapon damage taken by a target by 15%; increase power damage taken by 15% for 10 seconds

**Rank 6a—Pierce:** Increase damage to barriers and armor by 50%; weaken armored targets by an additional 25%

**Rank 6b—Recharge Speed:** Increase recharge speed by 35%

### Ranks 1 through 3 Analysis

Warp is a cruel and vicious power, perfect to use against Reapers and Cerberus foes alike. Even at low ranks it can deal 300 points of damage on an enemy for up to 10 seconds. You can stop upgrading at Rank 3 and use Warp strictly as a source power for power combinations, but its potential value reaches far beyond that so consider making Warp one of your go-to skills.

### Rank 4 Analysis

At Rank 4, you can either increase damage (Rank 4a) up to 375 points of damage, a worthwhile investment, or you can augment your unique detonate ability (Rank 4b). This benefit is gained only when using Warp as a source power and another power is used to detonate it. When it does, Rank 4b will increase all aspects of the detonation by 50 percent.

### Rank 5 Analysis

Rank 5a, Lasting Damage, increases both damage and duration of Warp, making it deadlier and longer lasting. It may not be fancy, but the selection amplifies two of Warp's three most important components. If you plan on frequently using Warp as a stand-alone attack, then select Rank 5a. Expose, Rank 5b, increases both weapon and power damage to targets affected by Warp. This is useful when you want to weaken enemies and allow your squadmates to inflict additional damage while your powers recharge.

### Rank 6 Analysis

The final upgrade tree in Warp either increases its recharge speed to maximum, lowering the recharge time to less than 8 seconds (Rank 6b), or increases its piercing ability to weaken barriers and armor and armored targets (Rank 6a). Like Rank 5b, the benefits of Rank 6a allow your squadmates to pour on additional damage to affected enemies.

#### TIP

The "weakens armored targets" only refers to targets with an armor bar, the yellow bar.

## THROW

Toss your enemy through the air with this Biotic blast.

**Rank 1—Recharge Speed:** 4 sec.; Force: 600 Newtons

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Force:** Increase force by 30%

**Rank 4a—Force:** Increase force by 40%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Detonate:** Increase force and damage of Biotic detonations by 50%

**Rank 5b—Recharge Combo:** Reset recharge time after a Biotic combo detonates

**Rank 6a—Double Throw:** Launch two Throw projectiles to seek two targets instead of one

**Rank 6b—Recharge Speed:** Increase recharge speed by 50%

### Ranks 1 through 3 Analysis

In the hands of a powerful adept, Throw is a very useful skill. With a single blast, you can rid yourself of pesky foes and clear a path in battle for squadmates. At Rank 3, your blast of 780 Newtons hurls foes even farther, so consider upgrading to Rank 3, even if you don't plan on using this often. Also, if you don't upgrade this power beyond Rank 3, keep it in your arsenal anyway; its function as a detonator power can complement nearly any squad composition with source powers.

### Rank 4 Analysis

At Rank 4, you can gain a simple force or radius increase. Rank 4a, Force, increases the amount of force exerted by each Throw blast to 1,020 Newtons. This has the added ability of knocking foes into other enemies and disrupting enemy attacks. Rank 4b, Radius, increases the impact of radius by 2 meters, allowing you to hit more than one enemy per Throw blast. This is especially useful in narrow corridors or battlefields where enemies bunch together into smaller groups.

### Rank 5 Analysis

At Rank 5 you can increase the volatility of your Throw power (Rank 5a) or grant yourself the ability to create even more explosive combos (Rank 5b). Select Rank 5a if you want to use Throw as a damage-dealing detonator for source powers. In fact, as an Adept, you can create your own Biotic explosions using Singularity as a source power. If you want to create these explosive combos, then select Rank 5a. However, Rank 5b can also help if you have several squadmates who can launch source powers. By frequently using your Throw as a detonator power, you can maximize Throw's potential for damage output, not just enemy disruption.

### Rank 6 Analysis

At Rank 6, you can either increase the amount of Throw projectiles to seek two targets (Rank 6a) or increase Throw's recharge speed by 50 percent (Rank 6b). If you plan on using Throw as an area-clearing disruptive power, then select Rank 6a. The extra Throw projectile will help clear more enemies efficiently. If you plan on using Throw as a detonator power, then select Rank 6b; that way you can detonate any source powers set up by your squadmates.

## SHOCKWAVE

Topple a row of enemies with this cascading shock wave.

**Rank 1—Recharge Speed:** 8 sec.; Damage: 200; Force: 600 Newtons; Radius: 2 meters; Range: 7 meters

**Rank 2—Recharge Speed:** Increase recharge speed by 20%

**Rank 3—Force and Damage:** Increase force and damage by 20%

**Rank 4a—Force and Damage:** Increase force and damage by 30%

**Rank 4b—Radius:** Increase impact radius by 35%

**Rank 5a—Detonate:** Increase force and damage of Biotic detonations by 50%

**Rank 5b—Reach:** Increase the distance that Shockwave cascades by 50%

**Rank 6a—Recharge Speed:** Increases recharge speed by 35%

**Rank 6b—Lifting Shockwave:** Suspends targets in the air for a short time

## Ranks 1 through 3 Analysis

Shockwave is another disruptive ability in an Adept's arsenal. Like throw, it can hurl enemies out of the way and clear a path forward. Unlike Throw, however, this power doesn't stop at affecting one or two enemies. It also does not travel around objects or other enemies. Shockwave travels in a straight line and for a long distance, affecting all enemies in its path. This makes it a particularly useful power for Adepts who want to focus on disruption rather than destruction. Of course, Shockwave is also a detonator power, so it can also be used to trigger explosive combos.

## Rank 4 Analysis

Like most other powers, you can either select to increase its force and damage (Rank 4a) to inflict more damage on enemies and hurl them farther, or you can increase its radius (Rank 5b), allowing each Shockwave to reach more enemies. The choice should be made depending on whether you want to cause more damage or disrupt more enemies.

## Rank 5 Analysis

If you select Rank 5a, you can increase the force and damage of Biotic combinations when using Shockwave as a detonator power. Select this if you plan to use Shockwave as part of explosive Biotic combos. If you want to use Shockwave as only a disruptive ability, then select Rank 5b. This will let the Shockwave travel farther before it dissipates.

## Rank 6 Analysis

At Rank 6a, you can increase the recharge speed of Shockwave in order to use it more frequently. At Rank 6b, you can add an additional "lift" ability to raise affected foes off the ground for a short time. While this may not seem like a big deal, it will help combo off power upgrades like Singularity's Rank 5a, which adds lift damage to lifted enemies.

## PULL

Yank an opponent helplessly off the ground.

**Rank 1—Recharge Speed:** 4 sec.; Duration: 4 sec.

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration:** Increase duration by 40%

**Rank 4a—Duration:** Increase duration by 60%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Lift Damage:** Inflict 20 damage per second to lifted targets

**Rank 5b—Expose:** Increase all damage to targets lifted by Pull by 25%

**Rank 6a—Double Pull:** Launch two Pull projectiles to seek two targets instead of one

**Rank 6b—Recharge Speed:** Increase recharge speed by 50%

## Ranks 1 through 3 Analysis

Perhaps one of the Adept's most unique powers, Pull can yank enemies closer to you. This can be extremely effective for Adepts who want to focus on close-quarter combat or disrupting enemies. At Rank 3, there won't be much use for Pull outside of disrupting enemy movement.

## Rank 4 Analysis

At Rank 4, you can increase the duration of Pull to knock enemies off balance for 60 percent longer (Rank 4a) or use its radius to affect more enemies nearby (Rank 4b). If you want to focus on enemy disruption, then select Rank 4b. The ability to affect more enemies can help your squad in nearly any combat situation. However, increasing the duration of the Pull effect will grant you more time to use Pull as a source power and trigger more explosive Biotic combos.

## Rank 5 Analysis

Adepts have the unique ability to disrupt, and then destroy enemies. Since a lot of their powers affect lifted targets, Adepts can use these power combinations to lift enemies off the ground, then inflict damage on them as they dangle helplessly. Rank 5a will allow enemies lifted by powers like Singularity or even Shockwave (Rank 6b) to take 20 points of damage for however long they're in the air. Rank 5b will increase damage to affected enemies by 25 percent. So even if they're not in the air, they can still take extra damage with ammo powers or other types of attacks.

## Rank 6 Analysis

Like Throw, Pull also has an upgrade option that allows you to affect two targets rather than one. Select Rank 6a to increase the disruptive abilities of Pull. After all, more enemies off balance means less enemies that can attack. Alternatively, if you want to use Pull more frequently on the battlefield, select Rank 6b. The increased recharge speed will lower the amount of time it takes before you can launch it again.

## CLUSTER GRENADE (UNIQUE)

Lob this Biotic grenade cluster at your enemies and watch them fly.

**Rank 1—Damage Per Second:** 250; Force: 1,000 Newtons; Radius: 3 meters

**Rank 2—Max Grenades:** Increase grenade capacity by 1

**Rank 3—Force and Damage:** Increase force and damage by 20%

**Rank 4a—Force and Damage:** Increase force and damage by 30%

**Rank 4b—Radius:** Increase impact radius by 35%

**Rank 5a—Max Grenades:** Increase grenade capacity by 2

**Rank 5b—Damage Combo:** Increase damage to already-lifted targets by 100%

**Rank 6a—Shrapnel:** Increases shrapnel count by 2

**Rank 6b—Force and Damage:** Increase force and damage by 50%

### Ranks 1 through 3 Analysis

Cluster Grenades are useful in nearly all combat situations. At Ranks 1 through 3, a well-aimed grenade can serve as a great medium- to long-range weapon. Hurl it ahead of you and inflict damage on unsuspecting foes. These grenades don't just explode like typical frag grenades; they burst into smaller clusters of explosions that also deal Biotic damage while covering a larger radius than typical grenades.

### Rank 4 Analysis

At Rank 4, you can choose to increase either the force and damage output or the damage radius. If you want to concentrate on dishing out maximum damage, choose Rank 4a. Not only will this inflict more damage, but also its increased force will hurl enemies farther. Rank 4b will increase the impact radius of your grenades and their cluster bombs, allowing you to damage more enemies.

### Rank 5 Analysis

Rank 5 allows you to either increase the amount of grenades you can carry or increase the damage dealt to lifted enemies by 100 percent. For players who want to be offensive powerhouses, consider carrying more grenades. Rank 5a will ensure that you always have plenty of grenades for nearly all combat scenarios. Rank option 5b can also help maximize damage to targets. Another one of the Adept's "lift" combos, Rank 5b's damage increase to lifted targets can stack on top of other "lift" damage bonuses.

### Rank 6 Analysis

At Cluster Grenade's maximum rank, players can either increase force and damage (Rank 6b) or increase shrapnel effects (Rank 6a). Both options are worthwhile upgrades, so decide on whether you want to focus on enemy disruption or secondary damage through shrapnel.

## BIOTIC MASTERY (UNIQUE)

Be an expert tactician on and off the battlefield. Faster and stronger Biotic powers. More dexterity. More charisma.

**Rank 1—Reputation Bonus:** 4%; Power Damage Bonus: 10%; Weight Capacity Bonus: 10

**Rank 2—Influence and Capacity:** Increase weight capacity bonus by 20 points; increase reputation bonus by 4%

**Rank 3—Influence and Damage:** Increase damage and force bonuses by 10%; increase reputation bonus by 4%

**Rank 4a—Damage and Force:** Increase damage and force bonuses by 15%

**Rank 4b—Influence and Duration:** Increase duration of all powers by 25%; increase reputation bonus by 8%

**Rank 5a—Squad Bonus:** Increase the force and damage of squadmate powers by 30%

**Rank 5b—Damage and Capacity:** Increase power damage bonus by 10%; increase weight capacity bonus by 20 points

**Rank 6a—Combo Mastery:** Increase recharge speed of all powers by 30% for 20 seconds when detonating Biotic combos

**Rank 6b—Power Mastery:** Increase damage and force bonuses and power duration by 25%

### Ranks 1 through 3 Analysis

The Biotic Mastery passive power can be upgraded to benefit any number of varied Adept builds. Upgrade to at least Rank 3 if you want to increase your weight capacity and allow your Adept build to carry heavier weapons like shotguns or assault rifles.

### Rank 4 Analysis

At Rank 4, you must choose whether you'll focus on damage and force (Rank 4a), or influence and duration (Rank 4b). If you select Rank 4a, Damage and Force, powers like Singularity and Shockwave become all the more destructive. Their effects will inflict more damage and hurl enemies farther away. Rank 4b allows you to increase the duration of all powers, including Singularity attacks. Select Rank 4b to keep foes sustained in your powers' effects longer. Singularity and other powers with lift effects will last longer, allowing you to use them as source powers.

### Rank 5 Analysis

Rank 5a will increase the force and damage of your squad's powers. This is helpful if you want your teammates to use their powers in combination with yours. While this rank upgrade won't benefit you directly, the added power damage from your squad will help when your powers have weakened enemy forces or affected them with lift effects. Select Rank 5b to increase power damage and weight capacity. This will help increase your power recharge speed and damage, making skills like Shockwave and Warp all the more lethal.

### Rank 6 Analysis

For Adepts who want to focus on power combinations, select Rank 6a. Combo Mastery will increase the recharge speed of all powers when detonating Biotic combos. This upgrade option will allow you to become a Biotic combo expert. Use power combinations like Singularity and Warp or Shockwave to unleash destructive Biotic combos, and Rank 6a will increase the speed at which those powers will recharge for 20 seconds. Alternatively, if you don't plan on executing Biotic power combinations by yourself, then select Rank 6b, Power Mastery. This will increase all of your powers' destructive capabilities.

## BUILDS

## DISRUPT AND DESTROY

With skills like Singularity, Throw, Pull, and Shockwave, an Adept can effectively disrupt enemy movement by knocking them off balance and lifting them into the air. Once in the air, enemies are vulnerable to the squad's attacks and to all of the Adept's powers, which can increase in damage when applied to enemies in midair. By using these types of powers in conjunction with one another, you can first disrupt the enemy's movements, then inflict damage while they're incapacitated.

## DAMAGE AND BIOTIC COMBOS

Disruptive effects aside, an Adept's powers can also inflict a great deal of damage when used properly. Adept players who want to focus on damage-dealing should structure their power upgrades to maximize Biotic power combinations. Begin by investing in your most effective source power, Singularity. With Singularity as your base, structure the rest of your power upgrades to maximize combo power and effects. When you do, you'll have little need for squad members using detonate powers and will be more than capable of unleashing Biotic combos at will. You'll soon be the main damage-dealer in any squad you create, which will allow your two squadmates to focus on enemy disruption or other support roles. Invest heavily in Warp, Singularity, and Cluster Grenades to create a damage-dealing Biotic combo expert.

## ENGINEER

Engineers are tech specialists, the most effective class at disabling the defenses of the toughest enemies or incapacitating them to render them harmless. In combination with their weapons training, Engineers have the unique ability to spawn combat drones, which can harass enemies or force them out of entrenched covered positions.

Having an Engineer in the squad is like having an extra two, three, or even four people fighting alongside you. With their affinity for drones, turrets, and enemy AI hacking, Engineers can turn a lopsided situation into an advantage. However, even Engineers who don't use additional units in battle can still wreak havoc on the battlefield. Powers like Incinerate and Cryo Blast can inflict a decent amount of damage on all types of foes, but their ability to function as source powers makes Engineers a bonus to have in any squad.

Equip your Engineer with shotgun and pistol combinations if you don't plan on using powers very frequently in battle or in quick succession. Similarly, a light (low weight) assault rifle can help keep weight down to allow nearly any Engineer build be successful.

## TIP

**Pistols and SMGs are the lightest weapons. Assault rifles are midweight weapons, and shotguns and sniper rifles are generally the heaviest. But there are exceptions to these rules in all weapon categories. Find a weapon loadout that is right for you.**

## POWERS

### INCINERATE

Burn your opponents and incinerate their armor. Heavy damage to health and armor. Make an enemy panic, stopping health regeneration.

**Rank 1—Recharge Speed:** 8 sec.; Damage: 300

**Rank 2—Recharge Speed:** Increase recharge speed by 25%.

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Burning Damage:** Increase damage by an additional 40% over 8 seconds

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Freeze Combo:** Increase damage to frozen and chilled targets by an additional 100%

**Rank 6b—Armor Damage:** Increase damage to armored targets by 50%

#### Ranks 1 through 3 Analysis

Incinerate is a most destructive power. Because it can function as both a source and detonator power, it is always a good idea to upgrade this to at least Rank 3. Of course, it can also be used as a destructive, stand-alone power. If that's your goal, don't stop upgrading at Rank 3. Even at Rank 1 it can be used to create explosive fire combinations, but always consider upgrading to Rank 3.

#### Rank 4 Analysis

To increase the damage output of Incinerate up to 450 points of damage, select Rank 4a. The 30 percent increase is substantial enough to take down lesser enemies while inflicting large amounts of damage on tougher foes. Your other option is to increase the impact radius of Incinerate in order to scorch more enemies with every blast. Your choice here should depend on whether you want to be a main damage-dealer or complement the rest of the squad by softening multiple enemies at once.

#### Rank 5 Analysis

Players hoping to maximize Incinerate's damage potential should invest in Rank 5a, Burning Damage. This upgrade increases the damage over time and burns enemies past the shot's initial impact. When coupled with Incendiary Ammo or other detonator powers, this combination can lead to dazzling explosive results. Your other option at Rank 5 is to increase the recharge speed of Incinerate. This will allow you to use Incinerate more often in battle and become a deadly weapon, especially in squads with Biotic specialists.

#### Rank 6 Analysis

Rank 6a increases damage to frozen and chilled targets by an additional 100 percent. So if you plan on using your other elemental power, Cryo Blast, select this rank upgrade to benefit from cross-power upgrade bonuses. If you don't frequently use those freezing skills, then don't waste precious upgrade points on Rank 6a. Instead, use those points on Rank 6b and gain a very useful damage increase to armored targets.

### OVERLOAD

Overload electronics with this power surge, stunning your enemy. Effective against shields, barriers, and synthetics. Not as effective against organics.

**Rank 1—Overload:** Recharge Speed: 8 sec.; Damage: 220

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Chain Overload:** Hit 1 additional target within 8 meters with 60% less damage

**Rank 4b—Damage:** Increase damage by 30%

**Rank 5a—Neural Shock:** Incapacitate weaker organic enemies for a short duration

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Chain Overload:** Increase damage by 15%. Hit 1 additional target within 8 meters with 60% less damage.

**Rank 6b—Shield Damage:** Increase damage to barriers and shields by an additional 100%

#### Ranks 1 through 3 Analysis

By far one of the most useful powers against synthetics, Overload can temporarily fry electrical equipment like turrets and can singe synthetic foes. At Ranks 1 through 3, you gain a standard recharge speed and damage increase, so stop upgrading at Rank 3 if you don't plan on making Overload an integral part of your attack arsenal. However, during missions where you encounter geth or other synthetic opponents, you can still prove to be very useful.

#### Rank 4 Analysis

If you do make Overload a more integral part of your attack arsenal, then consider upgrading to Rank 4a. This will increase the amount of targets you can affect by one. So instead of overloading only one enemy at a time, you can stun multiple enemies with each Overload blast. Rank 4b is a standard damage increase. Select this if you want to focus on dealing more damage to individual enemies.

#### Rank 5 Analysis

At Rank 5, you gain the option to stun organic foes as well as synthetics. The Neural Shock ability will expand your role across several missions since Overload power will no longer be effective against synthetic targets alone. Rank 5b increases Overload's recharge speed, allowing you to use the skill more frequently in battle. The trade-off between Ranks 5a and 5b are simple: If you want to use Overload against more varied types of enemies, select 5a. If you want to use it more frequently in battle to stun enemies en masse, select Rank 5b.

#### Rank 6 Analysis

Like Rank 4a, Rank 6a will increase how many targets you can reach with an Overload blast by one and will increase the damage it inflicts by 15 percent. The choice is simple: If you selected Rank 4a, make the same selection here and you can stun small groups of enemies with one Overload blast. Not only will you incapacitate more enemies at once, but also you'll expend less power to do it. At Rank 6b, you can increase the damage dealt to barriers and shields, becoming extremely effective against all shielded foes.

## CRYO BLAST

Flash-freeze and shatter unprotected enemies. Slow down the rest. Weaken armor. Frozen targets won't regenerate health.

**Rank 1—Recharge Speed:** 4 sec.; Freeze Duration: 4 sec.; Movement Speed: -15%

**Rank 2—Recharge Speed:** Improve recharge speed by 25%

**Rank 3—Duration:** Increase power duration by 40%

**Rank 4a—Duration:** Increase power duration by 60%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Speed Reduction:** Decrease movement speed of chilled targets by an additional 20%

**Rank 5b—Cryo Explosion:** Increase damage to chilled and frozen targets by 10%

**Rank 6a—Recharge Speed:** Increase recharge speed by 50%

**Rank 6b—Frozen Vulnerability:** Increase damage to frozen and chilled targets by 15%. Weaken armored targets by an additional 25%.

### Ranks 1 through 3 Analysis

By upgrading Cryo Blast to Rank 3, you can increase the duration of freeze effects to nearly 6 seconds while decreasing the recharge speed for the power to 3.2 seconds. That means that if you use Cryo Blast heavily, you can fire a blast nearly every few seconds and freeze enemies for about the same time. So if you time things properly, you can theoretically keep a target frozen indefinitely until the rest of the squad can finish them off. This skill also works as a "source" power for cryo explosions. Once affected by Cryo Blast, targets can then be detonated using a detonator power like Concussive Shot, Shockwave, or Incinerate. Most importantly, if you plan on creating an Engineer who can deal damage using powers alone, invest heavily in Cryo Blast as well as Rank 6a of Incinerate.

### Rank 4 Analysis

The main benefit of Cryo Blast is that you can slow enemies and potentially freeze them in place, removing them from the equation on the battlefield. At Rank 4, you must choose whether to slow singular enemies for longer periods of time (great against larger, more powerful enemies) or to slow multiple enemies for less time. Make your selection here based on whether you want to focus more on crowd control or damage output.

### Rank 5 Analysis

At Rank 5, you can add an explosive effect to Cryo Blast with Rank 5b. Once the enemy is frozen or chilled, the cryo effects increase all damage to the enemy by 10 percent. If crowd control is your goal, select Rank 5a. This slows down enemy movement by an additional 20 percent, making foes move 35 percent slower overall. When combined with Rank 4a, the decrease in movement speed makes for an overwhelming advantage on the battlefield. Not only will foes move slower, but also they'll do so for nearly 7 seconds.

### Rank 6 Analysis

Engineers who want to focus on using more powers over drones and sentries should select Rank 6a. This will increase the recharge speed for Cryo Blast and allow you to use it far more frequently on the battlefield. This is best when trying to focus on crowd control. However, if you want to become an explosives specialist, select Rank 6b to increase the target's vulnerability. When used in conjunction with Incinerate, you can obliterate enemies on the battlefield with ease.

## COMBAT DRONE

Deploy this attack drone to stun targets and draw enemy fire.

**Rank 1—Recharge Speed:** 5 sec.; Drone Damage: 40; Drone Shields: 500

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Shields and Damage:** Increase drone's damage and shields by 30%

**Rank 4a—Shields and Damage:** Increase drone's damage and shields by 40%

**Rank 4b—Detonate:** Drone explodes when destroyed, dealing 156 points of damage across a 5-meter radius

**Rank 5a—Shock:** Upgrade drone's short-range attack to deal 130 points of damage across a 2.5-meter radius. Drone stuns enemies for a short duration.

**Rank 5b—Shields and Damage:** Increase drone's damage and shields by 50%

**Rank 6a—Rockets:** Upgrade drone with long-range rockets that deal 130 points of damage across a 1.5-meter radius

**Rank 6b—Chain Lightning:** Upgrade drone's electrical pulse to jump and hit 3 additional targets

### Ranks 1 through 3 Analysis

Combat Drone is one of the Engineer's most useful powers. With it you can summon a drone capable of distracting and destroying foes at higher ranks. At Ranks 1 through 3, the combat drones won't inflict much damage on foes, but it will serve as a worthwhile complement to any squad. After all, even though it won't dish out much damage, it will absorb up to 650 points of damage. That's 650 points of damage that you or your squadmates won't have to incur.

### Rank 4 Analysis

Rank 4a increases the drone's damage output and shields, meaning it can inflict more damage while taking more damage. This upgrade is worthwhile in all cases, whether you're using the combat drone as a defensive decoy or as a damage-dealing complement to your squad. If you want to use the drone as more of an offensive weapon, then select Rank 4b. This adds a detonate ability to the drone to make it blow up when destroyed and inflict up to 156 more points of damage on foes up to 5 meters.

### Rank 5 Analysis

Another upgrade to shields and damage, Rank 5b can maximize the drone's damage at 88 points per attack and an impressive 1,100 shields—that is, of course, only if you chose Rank 4a. With 1,100 shields, the combat drone will sustain an impressive amount of damage and stay longer on the battlefield. Your other option is to add a Shock ability to the combat drone's arsenal. With it, the drone will be able to deal even more damage (adding 170 points of damage) and stun foes for a short period of time.

### Rank 6 Analysis

The final two upgrade options for the combat drone are both offensive abilities. Rank 6a adds rockets to a potentially already lethal weapon. Each rocket will inflict 220 points of damage on top of the drone's base damage (or augmented damage if you upgraded Ranks 4a and 5b). This is another useful upgrade for players who want to become a drone/damage-dealing specialist since the rocket upgrades range is considerably higher than the drone's other attacks. If you're going to also invest in your Sentry Turret power, then consider upgrading Rank 6a. Otherwise, select Rank 6b. With it, your drone will be able to jump and hit three additional targets, allowing for better crowd control.

## SABOTAGE

Sabotage weapons and hack synthetics. Compromised synthetics fight on your side. Affected weapons overheat.

**Rank 1—Recharge Speed:** 8 sec.; Hack Duration: 12 sec.; Radius: 12 meters; Backfire: 150

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Radius:** Increase impact radius by 30%

**Rank 4a—Duration:** Increase power duration by 50%

**Rank 4b—Backfire:** Increase damage taken by 30% when enemy weapons overheat

**Rank 5a—Explosive Hack:** Synthetics explode when destroyed, dealing 120 points of damage across a 3-meter radius

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Berserk:** Hacked synthetics fighting on your side move faster and do 100% more damage.

**Rank 6b—Tech Vulnerability:** Increase all Tech power damage done to target by 100% for 10 seconds

### Ranks 1 through 3 Analysis

Sabotage is a useful skill whenever facing synthetic life-forms like the geth, Cerberus Engineer turrets, and Cerberus Atlas mechs. With it, you can overwrite their programming and turn enemies into allies. While this is already extremely effective in evening things out, the added explosive backfire can also help dwindle enemy numbers. At Rank 3, Sabotage can impact enemies within a 3.25-meter radius and hack them for 12 seconds.

### Rank 4 Analysis

At Rank 4, you can choose to either increase how long enemies remain hacked (Rank 4a) or how much damage they cause enemies when their weapons explode (Rank 4b). Make your selection here based on your eventual role in combat. If you want to be a crowd-controlling Tech maven, select Rank 4a. This will keep the drones in the field longer and allow you to control your foes. If you want to concentrate on damage-dealing, then select Rank 4b, Backfire. This will increase the amount of damage enemies sustain to 195 points of damage.

### Rank 5 Analysis

Rank 5 has two more upgrades similar to Rank 4. Choose Rank 5b to increase Sabotage's recharge speed. By doing so, Sabotage will be ready for use in under 11 seconds. This may seem like a long time, but when the effect lasts 12 seconds, the benefits are clear: You'll be ready to launch another Sabotage attack before the first one completely wears off. If you choose Rank 5a, then the Sabotage will gain an explosive hack upgrade. Affected synthetics will explode at the end of the hack and inflict an additional 120 points of damage to enemies within a 3-meter radius. If you want to concentrate on dealing damage, select Rank 5a—the added damage is worthwhile.

### Rank 6 Analysis

The final upgrade selection for Sabotage can either bolster your hacked allies (Rank 6a) or increase all Tech damage done to the affected enemy for 10 seconds (Rank 6b). If you want to use all hacked enemies as long as possible and turn them on their comrades, then select Berserk (Rank 6a). This will turn hacked foes into formidable allies. Otherwise, select Rank 6b, Tech Vulnerability, to increase the amount of damage you can inflict. This is best for players who don't want to bother with crowd control and instead want to focus on damage-dealing.

## SENTRY TURRET (UNIQUE)

Deploy this heavy-weapon turret for cover fire.

**Rank 1 Recharge Speed:** 5 sec.; Turret Damage: 25 sec.; Turret Shields: 500

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Shields and Damage:** Increase turret's shields and damage by 30%

**Rank 4a—Shields and Damage:** Increase turret's shields and damage by 40%

**Rank 4b—Shock:** Upgrade turret with shock attack to stun enemies

**Rank 5a—Cryo Ammo:** Upgrade turret with Cryo Ammo, giving it a chance to freeze enemies for 3 seconds

**Rank 5b—Armor-Piercing Ammo:** Upgrade turret with armor-piercing ammo, giving it 100% damage bonus against armor

**Rank 6a—Rockets:** Upgrade turret with long-range rockets that deal 130 points of damage across a 1.5-meter radius

**Rank 6b—Flamethrower:** Upgrade turret with a close-range flamethrower that deals 71.5 points of damage per second

### Ranks 1 through 3 Analysis

Aside from the combat drone, the Sentry Turret is one of the Engineer's most valuable power. Like the combat drone, the Sentry Turret can serve as a secondary damage-dealing weapon, one capable of inflicting damage while simultaneously distracting foes. Where the combat drone moves around the battlefield, the Sentry Turret stations itself wherever you deploy it. Luckily, its damage output more than makes up for its lack of mobility. Tacticians can use the Sentry Turret to either pin down enemies or divert them around the battlefield.

### Rank 4 Analysis

At Rank 4, you can either increase the shield and damage output for your turret (Rank 4a) or add a shock ability to stun foes. This function works exactly as it does with the combat drone, so if you want to focus on crowd control and have selected it for your combat drone as well, then do so now. The added shock attacks will be very helpful when both the combat drone and the Sentry Turrets are deployed. If you feel comfortable with only one Shock upgrade (on your Combat Drone), then select Rank 4a. The added damage for your Sentry Turret will make it a formidable ally on the battlefield.

### Rank 5 Analysis

An added ammo upgrade can prove very useful in battle. If you don't want to invest in Cryo Blast, consider selecting Rank 5a. If the Cryo Ammo manages to freeze a target, then follow up with Incinerate (especially if it has been upgraded to Rank 6a) and shatter your foes. If you want to gain a substantial advantage over armored foes, and you've invested in Cryo Blast, then select Rank 5b.

### Rank 6 Analysis

The final rank upgrade depends on whether you want to use the Sentry Turret in close- or long-range combat. The rockets upgrade of Rank 6a allow you to obliterate enemies from afar. Select this upgrade to use your Sentry Turret to whittle down foes as they approach, usually as the turret is deployed near you. To pin enemies down before they can attack, select Rank 6b to gain a powerful flamethrower ability. With it, you can keep the turret away from you and allow the flamethrower to inflict damage at close range. This will force your foes to engage the turret and keep a distance from you.

## TECH MASTERY (UNIQUE)

Be an expert tactician on and off the battlefield. Faster and stronger Tech powers. More dexterity. More charisma.

**Rank 1—Reputation Bonus:** 4%; Power Damage Bonus: 10%; Weight Capacity Bonus: 10

**Rank 2—Influence and Capacity:** Increase weight capacity bonus by 20 points. Increase reputation bonus by 4%

**Rank 3—Influence and Damage:** Increase power damage bonus by 10%; increase reputation bonus by 4%

**Rank 4a—Power Damage:** Increase power damage bonus by 15%

**Rank 4b—Duration:** Increase duration of all powers by 25%; increase reputation bonus by 8%

**Rank 5a—Squad Bonus:** Increase the force and damage of squadmate powers by 30%

**Rank 5b—Damage and Capacity:** Increase power damage bonus by 10%; increase weight capacity bonus by 20 points

**Rank 6a—Drone Mastery:** Increase combat drone's and Sentry Turret's shields by 100%; increase combat drone's and Sentry Turret's damage by 50%

**Rank 6b—Power Mastery:** Increase power damage and duration by 25%

## Ranks 1 through 3 Analysis

The Tech Mastery passive power can be upgraded to benefit any number of varied Engineer builds. However, at Rank 3, the reputation, power damage, and weight capacity bonuses can benefit any Engineer.

## Rank 4 Analysis

At Rank 4, you must choose whether you'll focus on power-damage or drone/sentry damage. If you select Rank 4a, Power Damage, powers like Incinerate and Cryo Blast will become all the more destructive. At Rank 4b, you can increase the duration of all powers, including Combat Drones, Sentry Turrets, and Sabotage attacks. Select Rank 4b to keep your one-man army on the field longer.

## Rank 5 Analysis

Rank 5a will grant your squad a bonus, increasing the force and damage of their powers. This is helpful if you want your teammates to use their powers in combination with yours. While this rank upgrade won't benefit you directly, the added power damage from your squad will help when your drones have weakened enemy forces. Select Rank 5b to increase power damage and weight capacity. This will help increase your power recharge speed and damage, making skills like Incinerate all the more lethal.

## Rank 6 Analysis

For Engineers who want to focus on drones and sentries usage, select Rank 6a. Drone Mastery will increase the effectiveness of both the drone and the sentry's shields and damage significantly. With this upgrade, you can maximize the amount of damage your damage-dealing manifestations can inflict and sustain. If you want to focus more on using powers like Incinerate and Cryo Blast, select Rank 6b instead. The bonus to damage and duration will allow your squad to combo more effectively when you unleash your elemental powers.

## BUILDS

## ONE-PERSON SQUAD

The one-person squad Engineer relies heavily on three main powers: Combat Drone, Sentry Turret, and Sabotage. With these three power combinations, you can unleash additional damage-dealing units into the field to inflict damage, distract foes, and create tactical nightmares for the opposition. Additionally, when using Sabotage on synthetic enemies, a talented Engineer can also turn mechanical foes into friends, increasing the number of fighters on the squad even more. There are few things as impressive as walking into battle while a turret scorches foes up close, a combat drone unleashes rockets from afar, and an unsuspecting geth turns on its own squad to fight for you.

## ADEPTLIKE DAMAGE-DEALER (CROWD CONTROL)

If increasing your numbers isn't a battle tactic you want to employ, then focus on using destructive and disruptive powers instead. Invest upgrade points in powers like Overload, Incinerate, and Cryo Blast. With these powers, you'll be able to create multiple explosive power combinations. Upgrade Incinerate to Rank 6a and you'll be able to maximize the effectiveness of Cryo Blast as well, since you'll be able to slow enemies, then detonate them in magnificent explosions. If you don't want to focus on power damage, use your three powers to slow and disrupt enemies in a crowd-control capacity.

# INFILTRATOR

Infiltrators are Tech and combat specialists with the unique ability to cloak themselves from visual and technological detection. Their inventory is stacked with a wide variety of weapons, equipment, and powers. Infiltrators are deadly at any range, but particularly so with a sniper rifle. When scoping a target, superior reflexes take over, time momentarily slows down, and enemies are easy pickings.

Depending on your play style, you can build an Infiltrator to stay as far away from the action as possible, picking off enemies with sniper tactics before your squad leads the charge into battle. Alternatively, Infiltrators can also specialize in close-range combat, dealing major damage with shotguns and augmented melee attacks. The key to both types of attacks, however, is expert use of the Tactical Cloak. This should be the base of every Infiltrator build.

An Infiltrator has an inherent talent when scoping in on enemies with a sniper rifle, so pair a sniper rifle with another light weapon, such as an SMG, so as to maximize the recharge speed for all powers. However, should you select a different approach for your Infiltrator, consider pairing a shotgun with a pistol. The weight won't be too heavy, but you'll have a decent balance of accuracy, damage, and range.

## POWERS

### DISRUPTOR AMMO

Bring down your enemy's barriers and shields. Chance to stun. More weapon damage. More damage to shields and barriers.

**Rank 1—Health Damage Bonus:** +5%;  
Shield and Barrier Damage: +20%

**Rank 2—Stun:** Improve the odds of stunning a target by 15%

**Rank 3—Damage:** Increase health damage bonus by 2%; increase shield and barrier damage bonuses by 8%

**Rank 4a—Damage:** Increase health damage bonus by 3%; increase shield and barrier damage bonuses by 12%

**Rank 4b—Squad Bonus:** Squadmates gain Disruptor Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 25%

**Rank 6a—Damage:** Increase health damage bonus by 5%; increase shield and barrier damage bonuses by 20%

**Rank 6b—Stun:** Improve the odds of stunning a target by 25%

#### Ranks 1 through 3 Analysis

Disruptor Ammo is a great power for a damage-dealer because it makes all weapon fire even more lethal. With Disruptor Ammo (or any Ammo power, in fact), it's best to activate it before every mission and make sure you keep it active at all times. When active, it adds the ability to stun foes and incapacitate them before they can attack. It also functions as a "source" power that can be detonated using other powers like Incinerate. For an Infiltrator, Disruptor ammo can prove to be very effective in softening up foes before switching to Tactical Cloak and taking down the stunned foe stealthily.

#### Rank 4 Analysis

At Rank 4, Disruptor Ammo can either increase damage to health and shield/barriers (4a), or you can gain the ability to automatically grant it to all squadmates when active (4b). The choice really breaks down to whether you want to dish out as much damage as you can or whether you want to stalk stunned enemies on the battlefield. By granting your squadmates the use of your Disruptor Ammo, you'll increase the number of enemies that are stunned on the battlefield. This will make it easier to sneak up behind them and finish them off.

#### Rank 5 Analysis

At Rank 5 you can select to either carry 30 percent more ammunition or to increase headshot damage by 25 percent. To make the best use of this selection, take into account what type of Infiltrator you're building. Infiltrators excel at using sniper rifles, so Rank 5b should be an obvious choice if you plan on taking advantage of that trait. However, if you plan on being a close-quarters assassin who prefers a shotgun and melee to the sniper rifle, then select Rank 5a. The added ammunition count will help, especially with shotguns that tend to carry low ammo.

#### Rank 6 Analysis

Both options in Rank 6 increase Disruptor Ammo's damage output. However, Rank 6a increases damage to health, barriers, and shields, depending on the enemy. This makes all shots with Disruptor Ammo all the more powerful since it's a good general increase to overall damage. Rank 6b adds an entirely new effect to shots taken using Disruptor Ammo. Instead of simply dealing more damage to health, shields, and barriers, it stuns enemies and incapacitates them, allowing your team to take out vulnerable, stunned foes. Your Rank 6 option should depend on whether you want to take down enemies one at a time, or if you want to incapacitate enemies before activating Tactical Cloak and sneaking up to kill them.

## CRYO AMMO

Flash-freeze and shatter unprotected enemies. Slow down the rest. Weaken armor. Frozen targets won't regenerate health.

**Rank 1—Freeze Duration:** 3 sec.; Movement Speed: -15%; Armor Weakening: -25%

**Rank 2—Freeze Chance:** Improve the odds of freezing a target by 30%

**Rank 3—Freeze Duration:** Increase freeze duration by 40%

**Rank 4a—Freeze Duration:** Increase freeze duration by 40%

**Rank 4b—Squad Bonus:** Squadmates gain Cryo Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 35%

**Rank 6a—Freeze Chance:** Improve the odds of freezing a target by 50%; decrease a frozen target's movement speed by an additional 20%

**Rank 6b—Damage Combo:** Increase damage to frozen targets from all sources by 50%; weaken the armor of chilled targets by 25%

## Ranks 1 through 3 Analysis

Cryo Ammo is a perfect tool for Infiltrator snipers. Its freezing abilities can slow targets or even instantly shatter them if you get a headshot. However, even if you don't plan on sniping and instead use it with pistols, SMGs, or shotguns, the slowing effects of Cryo Ammo can give an Infiltrator enough time to sneak up on a frozen enemy and put them out of their misery.

## Rank 4 Analysis

At Rank 4, Cryo Ammo can either increase duration (Rank 4a), or you can gain the ability to automatically grant it to all squadmates when active (Rank 4b). Like Disruptor Ammo's Rank 4 upgrade options, you can select Rank 4b to give your teammates a chance at freezing foes as well. This will benefit Infiltrators by allowing them to zoom in on frozen enemies or sneak up on them. By selecting Rank 4a, you can ensure that enemies will stay frozen longer after sustaining a shot with Cryo Ammo.

## Rank 5 Analysis

This Rank upgrade is no different than Disruptor Ammo's Rank 5 upgrade. You can select to either carry 30 percent more ammunition or to increase headshot damage by 25 percent. To make the best use of this selection, take into account what type of Infiltrator you're building. Infiltrators excel at using sniper rifles, so Rank 5b should be an obvious choice if you plan on taking advantage of that trait. However, if you plan on being a close-quarters assassin who prefers a shotgun and melee to the sniper rifle, then select Rank 5a. The added ammunition count will help, especially with shotguns that tend to carry low ammo.

## Rank 6 Analysis

At Rank 6, you can either increase how effective Cryo Ammo is as a stand-alone damage-dealing power (Rank 6a) or increase damage to frozen enemies with all other attacks (Rank 6b). If you want to obliterate enemies with one shot, such as with a sniper-proficient Infiltrator, then select Rank 6a. Infiltrators who want to weaken foes for the rest of the group should invest in Rank 6b.

## INCINERATE

Burn your opponents and incinerate their armor. Heavy damage to health and armor. Make an enemy panic, stopping health regeneration.

**Rank 1—Recharge Speed:** 8 sec.; Damage: 300

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Burning Damage:** Increase damage by an additional 40% over 8 seconds

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Freeze Combo:** Increase damage to frozen and chilled targets by an additional 100%

**Rank 6b—Armor Damage:** Increase damage to armored targets by 50%

## Ranks 1 through 3 Analysis

Incinerate is a most destructive power. Because it can function as both a source and detonator power, it is always a good idea to upgrade this to at least Rank 3. That way, you can create explosive combinations with other team members. Of course, it can also be used as a destructive, stand-alone power. If that's your goal, don't stop upgrading at Rank 3. Infiltrators can use this power as a great substitute for weapon fire, since it is just as destructive and doesn't increase your weight load at all.

## Rank 4 Analysis

To increase the damage output of Incinerate up to 450 points of damage, select Rank 4a. The 30 percent increase is substantial enough to take down lesser enemies while inflicting large amounts of damage on tougher foes. Your other option is to increase the impact radius of Incinerate to scorch more enemies with every blast. Make your choice for this rank based on your overall plan of attack. If you plan on using Incinerate as a supplementary attack in place of extra weapons, then select Rank 4a. If you want to use it as a support power for your teammates to benefit as well, then select Rank 4b.

## Rank 5 Analysis

Players hoping to maximize Incinerate's damage potential should invest in Rank 5a, Burning Damage. This upgrade increases the damage over time and burns enemies past the initial impact of the shot. When coupled with other detonator powers, this power can lead to dazzling explosive results. Your other option at Rank 5 is to increase the recharge speed of Incinerate. This will allow you to use Incinerate more often in battle and become a deadly weapon, especially in squads with Biotic specialists. Any Infiltrator build will benefit a great deal from Incinerate, so either option will be worthwhile. However, Rank 5b's increased recharge speed will benefit Infiltrator snipers the most since you could use Incinerate in between rifle shots while you reload.

## Rank 6 Analysis

Rank 6a increases damage to frozen and chilled targets by an additional 100 percent. So if you plan on using another elemental power, such as your Cryo Ammo, select this rank upgrade to benefit from cross-power upgrade bonuses. If you don't plan on using Cryo Ammo or grouping with members who have freezing powers, then don't waste precious upgrade points on Rank 6a. Instead, use those points on Rank 6b and gain a very useful damage increase to armored targets.

## TACTICAL CLOAK (UNIQUE)

Become invisible. Gain a massive damage bonus when breaking cloak to attack.

**Rank 1—Recharge Speed:**  
10 sec.; Duration: 8 sec.; Damage Bonus: 40%

**Rank 2—Recharge Speed:**  
Increase recharge speed by 25%

**Rank 3—Duration:** Increase Tactical Cloak's duration by 30%

**Rank 4a—Duration:** Increase power duration by 40%.

**Rank 4b—Damage:** Increase damage bonus by 30%

**Rank 5a—Recharge Speed:**  
Increase recharge speed by 30%

**Rank 5b—Melee Damage:**  
Increase melee damage by 100% while cloaked

**Rank 6a—Bonus Power:** Fire one power while cloaked and remain hidden

**Rank 6b—Sniper Damage:**  
Increase sniper rifle damage by 35% while cloaked

### Ranks 1 through 3 Analysis

Tactical Cloak is an Infiltrator's most valuable and unique ability. Regardless of which type of build you create, every Infiltrator should invest heavily in this power, as it allows you to move about the battlefield freely and increase damage before decloaking. At Rank 3, you can activate Tactical Cloak and stay hidden for up to 10.4 seconds. That's more than enough time to traverse across a battlefield and get the drop on a specific enemy.

#### TIP

**The damage bonuses from Tactical Cloak stay on for about two seconds after decloaking, so you get a lot of time to unload on your target while decloaking. Also, you can deactivate Cloak at any time, and you get a shorter cooldown if you stay cloaked for only a short amount of time. So it can be used over and over in quick succession to get damage bonuses.**

### Rank 4 Analysis

At this rank, you must select whether you will be focusing more on duration (Rank 4a) or how much damage you will inflict while cloaked (Rank 4b). Make your choice based on what kind of Infiltrator you will be. If you plan on being a sniper-class Infiltrator, then select Rank 4b. The damage bonus will increase the chances of a one-shot kill should you miss with a headshot. If you plan on being a close-quarter combat Infiltrator, select Rank 4a. The increased power duration will grant you extra time to sneak up on foes before unleashing your attack from close-quarters.

### Rank 5 Analysis

This rank upgrade should tie in directly with your previous choice. Sniper-class Infiltrators will benefit from Rank 5a's increased recharge speed. This will allow you to quickly reload your sniper rifle, reengage your Tactical Cloak, and strike again. If you plan on attacking enemies at close range, select Rank 5b. The bonus melee damage will make all melee blows coming out of tactical cloak even more powerful, in some cases granting you one-hit kills.

### Rank 6 Analysis

Rank 6a's Bonus Power upgrade is extremely beneficial for Infiltrators that intend on using skills like Incinerate frequently. While cloaked, use Incinerate to soften foes up close, then put them down with melee or shotgun blasts. Rank 6b's obvious benefit is to sniper-proficient Infiltrators. The added damage will all but ensure that any shot you take will kill your foe.

## STICKY GRENADE

Stick this grenade to your opponent, and the explosion will tear apart the target and the shrapnel will damage other enemies caught in the blast.

**Rank 1—Damage:** 700;  
Radius: 2 meters

**Rank 2—Max Grenades:**  
Increase grenade capacity by 1

**Rank 3—Damage:**  
Increase damage by 20%

**Rank 4a—Damage:**  
Increase damage by 30%

**Rank 4b—Radius:**  
Increase impact radius by 30%

**Rank 5a—Max Grenades:**  
Increase grenade capacity by 2

**Rank 5b—Armor-Piercing:** Increase damage to armored units by 100%

**Rank 6a—Damage:**  
Increases damage by 40%

**Rank 6b—Proximity Trap:** Grenades stay active for 15 seconds when attached to a wall or surface, exploding when an enemy approaches. Increase impact radius by 50%.

### Rank 4 Analysis

At Rank 4 you can choose to either increase the damage output or damage radius. If you want to concentrate on dishing out maximum damage, choose Rank 4a. However, Rank 4b will increase the impact radius of your grenades, allowing you to damage more enemies.

### Rank 5 Analysis

Rank 5 allows you to either increase the amount of grenades you can carry or increase damage to armored units. For players who want to be offensive powerhouses, consider carrying more grenades. Rank 5a will ensure that you always have plenty of grenades for nearly all combat scenarios. Rank 5b can help soften up tough armored units that may prove initially difficult for Infiltrators. Since Infiltrators may be at a slight disadvantage against armored foes, consider selecting Rank 5b to weaken them before attacking with the big guns.

### Rank 6 Analysis

With Sticky Grenades at maximum rank, players can either increase force and damage (Rank 6b) or turn their sticky grenades into proximity mines (Rank 6a). Both options are worthwhile upgrades, so decide on whether you want to focus on maximum damage or creating traps for enemies while you're in stealth mode. Rank 6b is especially useful for Infiltrators who want to set up intricate traps for tougher enemies like Brutes, Nemesis, and even Phantoms.

### Ranks 1 through 3 Analysis

Sticky Grenades are especially useful for Infiltrators who will focus on medium- to close-range combat (or Infiltrators with great throwing aim). Sneaky Infiltrators can use these on unsuspecting foes while in close range. Engage your tactical cloak and stick one on an enemy or group of enemies before moving on to the next target.

## SABOTAGE

Sabotage weapons and hack synthetics. Compromised synthetics fight on your side. Affected weapons overheat.

**Rank 1—Recharge Speed:** 8 sec.; Hack Duration: 12 sec.; Radius: 12 meters; Backfire: 150

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Radius:** Increase impact radius by 30%

**Rank 4a—Duration:** Increase power duration by 50%

**Rank 4b—Backfire:** Increase damage taken by 30% when enemy weapons overheat

**Rank 5a—Explosive Hack:** Synthetics explode when destroyed, dealing 120 points of damage across a 3-meter radius

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Berserk:** Hacked synthetics fighting on your side move faster and do 100% more damage

**Rank 6b—Tech Vulnerability:** Increase all Tech power damage done to target by 100% for 10 seconds

### Ranks 1 through 3 Analysis

Sabotage is a useful skill whenever facing synthetic life-forms like the geth, Cerberus Engineer turrets, and Cerberus Atlas mechs. With it, you can overwrite their programming and turn enemies into allies. While this is already extremely effective in evening things out, the added explosive backfire can also help dwindle enemy numbers. At Rank 3, Sabotage can impact enemies within a 3.25-meter radius and hack them for 12 seconds. For Infiltrators, this skill can be extremely useful in dealing with pesky enemy turrets that can pin you down in less-than-desirable vantage points. Sabotage the turret and wait for it to turn on the enemy. When it does, leave your position and seek better cover to snipe or launch a sneak attack on enemies from close-quarters.

### Rank 4 Analysis

At Rank 4, you can choose to either increase how long enemies remain hacked (Rank 4a) or how much damage is caused when their weapons explode (Rank 4b). Make your selection here based on your eventual role in combat. The longer an enemy or turret is focused away from you, the longer you'll have to reposition. By using Sabotage on turrets and enemies first, you won't have to waste the use of Tactical Cloak to hide and seek a better position. Rank 4b's Backfire ability can help soften enemies before you deliver the killing blow.

### Rank 5 Analysis

Rank 5 has two more upgrades similar to Rank 4. Here, however, choose Rank 5b to increase Sabotage's recharge speed. By doing so, Sabotage will be ready for use in under 6 seconds. When the effect lasts 12 seconds, the benefits are clear: You'll be ready to launch another Sabotage attack before the first one completely wears off. If you choose Rank 5a, then the Sabotage will gain an explosive hack upgrade. Affected synthetics will explode at the end of the hack and inflict an additional 120 points of damage to enemies within a 3-meter radius. If you want to concentrate on dealing damage, select Rank 5a—the added damage is worthwhile.

### Rank 6 Analysis

The final upgrade selection for Sabotage can either bolster your hacked allies (Rank 6a) or increase all Tech damage done to the affected enemy for 10 seconds (Rank 6b). If you want to use all hacked enemies as long as possible, and turn them on their comrades, then select Berserk (Rank 6a). This will turn hacked foes into formidable allies. Otherwise, select Rank 6b, Tech Vulnerability, to increase the amount of damage you can inflict. This is best for players who don't want to bother with crowd control and instead want to focus on damage-dealing.

## OPERATIONAL MASTERY

Be an expert tactician on and off the battlefield. More time to line up the perfect shot. Quicker reflexes. More dexterity. More charisma.

**Rank 1—Reputation Bonus:** 4%; Weapon Damage Bonus: 2.5%; Weight Capacity Bonus: 15; Sniper Time-Dilation: 30%

**Rank 2—Influence and Capacity:** Increase weight capacity bonus by 20 points. Increase reputation bonus by 4%

**Rank 3—Influence and Sniping:** Increase sniper time-dilation by 10%. Increase weapon damage bonus by 2.5%. Increase reputation bonus by 4%.

**Rank 4a—Weapon Damage:** Increase weapon damage by 5%; increase power damage by 10%

**Rank 4b—Influence and Duration:** Increase duration of all powers by 25%; increase reputation bonus by 8%

**Rank 5a—Squad Bonus:** Increase squadmate weapon damage by 10%; increase squadmate power damage and force by 15%

**Rank 5b—Weight Capacity:** Increase weight capacity bonus by 35 points

**Rank 6a—Damage and Duration:** Increase power damage and duration by 25%

**Rank 6b—Sniper Damage:** Increase sniper rifle damage and headshot damage by 15%

### Ranks 1 through 3 Analysis

At Rank 3, Operational Mastery can benefit any kind of Infiltrator build. The added weapon damage can benefit sniper rifles, shotguns, and even pistols, so don't hesitate to invest the six points required to upgrade this minimally. However, if you plan on focusing on sniper rifle damage, consider investing more points in this immensely helpful passive power.

### Rank 4 Analysis

At Rank 4a, you can continue to increase weapon damage (Rank 4a) or gain a bonus to power duration and reputation (Rank 4b). All Infiltrator builds can benefit from increased damage. However, Infiltrators who need increased time in stealth mode (Tactical Cloak) should select Rank 4b. The increased power duration will allow you to stay hidden longer to take care of business.

### Rank 5 Analysis

Rank 5a will grant teammates increases in weapon damage, power damage, and power force. This will prove useful for Infiltrators who rely on squad support the most. If you plan on sniping and need your team to bear the burden of keeping enemy fire off you, select this upgrade. Rank 5b will increase your weight capacity. Select this upgrade if you want to carry heavier weapons like shotguns and assault rifles. By increasing your weight capacity, you can keep your recharge time low and get more use of your powers.

### Rank 6 Analysis

Finally, Rank 6 will force you to decide whether to go sniper-heavy (Rank 6b) or increase the damage and duration of your power (Rank 6a). The choice here is easy. If you've made other sniper-leaning choices for your upgrades, pick Rank 6b. With it, you'll be a one-hit kill machine. Otherwise, benefit from Rank 6a's increased damage and duration.

## BUILDS

### STEALTH ASSASSIN: SNIPER

This build type requires you to have every sniper- or headshot-related upgrade selected. With it, you can increase the amount of time you spend hidden from foes while using Tactical Cloak, and you can quickly unleash a flurry of headshots on unsuspecting enemies. Invest heavily in powers like Cryo Ammo, Tactical Cloak, Sabotage (to turn enemies away from you while sniping), and Disruptor Ammo. Stay hidden as much as possible and avoid hand-to-hand combat in favor of a high vantage point.

### STEALTH ASSASSIN: SHOTGUN/MELEE

Since Tactical Cloak hides you from all enemy detection, consider investing in melee upgrades as well as powers like Sticky Grenade, Incinerate, and Cryo Ammo. Equip a shotgun, activate Cryo Ammo, and then engage your Tactical Cloak. With those three elements alone, you can roam around the battlefield blasting enemies at close range and often obliterating them in one shot. For added effectiveness, select Rank 6a for Tactical Cloak and you'll be able to unleash a devastating Incinerate blast from the cover of your cloak before unloading with the shotgun. If you still don't manage to destroy the enemy, then reengage your cloak and attack with a melee blow before the rest of the enemies can get a lock on your position. Be warned, however: This build is prone to taking more damage, so you'll have to be fast in taking cover and reengaging your cloak to stay out of enemy detection.

## SENTINEL

Sentinels are unique, bringing both Tech and Biotic abilities to the battlefield. In addition to complete weapons training, Sentinels are equipped with an advanced shield that makes taking cover much less necessary and rushing enemies much more productive. This armor system can also be detonated to blast nearby enemies.

With great Tech and Biotic powers available, as well as decent weapon and melee damage potential, the Sentinel is built to cause maximum damage in nearly any way possible. This makes the Sentinel one of the most versatile damage-dealers on the battlefield. However, regardless of what kind of Sentinel build you create, one thing is always certain: You'll always be able to tank and cut a path through enemies.

With so many different types of Sentinel builds available, the weapon loadout can vary from assault rifles and SMGs to shotguns and pistols.

## POWERS

## THROW

Toss your enemy through the air with this Biotic blast.

**Rank 1—Recharge Speed:** 4 sec.; Force: 600 Newtons

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Force:** Increase force by 30%

**Rank 4a—Force:** Increase force by 40%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Detonate:** Increase force and damage of Biotic detonations by 50%

**Rank 5b—Recharge Combo:** Reset recharge time after a Biotic combo detonates

**Rank 6a—Double Throw:** Launch two Throw projectiles to seek two targets instead of one

**Rank 6b—Recharge Speed:** Increase recharge speed by 50%

## Ranks 1 through 3 Analysis

In the hands of a powerful Sentinel, Throw is a very useful skill. With a single blast, you can rid yourself of pesky foes and clear a path in battle for squadmates. At Rank 3, your blast of 780 Newtons hurls foes even farther, so consider upgrading up to at least Rank 3, even if you don't plan on using this often. However, if you don't plan on upgrading this power beyond Rank 3, keep it in your arsenal anyway; its function as a detonator power can complement nearly any squad composition with source powers.

## Rank 4 Analysis

At Rank 4, you can gain a simple force or radius increase. Rank 4a, Force, increases the amount of force exerted by each Throw blast to 1,020 Newtons. This has the added ability of knocking foes into other enemies and disrupting enemy attacks. Rank 4b, Radius, increases the impact of radius by 2 meters, allowing you to hit more than one enemy per Throw blast. This is especially useful in narrow corridors or battlefields where enemies bunch together into smaller groups.

## Rank 5 Analysis

At Rank 5, you can increase the volatility of your Throw power (Rank 5a) or grant yourself the ability to create even more explosive combos (Rank 5b). Select Rank 5a if you want to use Throw as a damage-dealing detonator for source powers. In fact, as a Sentinel, you can create your own Biotic explosions using Warp as a source power. If you want to create these explosive combos, then select Rank 5a. However, Rank 5b can also help if you have several squadmates who can launch source powers. By frequently using your Throw as a detonator power, you can maximize Throw's potential for damage output, not just enemy disruption.

## Rank 6 Analysis

At Rank 6, you can increase either the amount of Throw projectiles to seek two targets (Rank 6a) or Throw's recharge speed by 50 percent. If you plan on using Throw as an area-clearing disruptive power, then select Rank 6a. The extra Throw projectile will help clear more enemies efficiently. If you plan on using Throw as a detonator power, then select Rank 6b; that way you can detonate any source powers set up by your squadmates.

## WARP

Rip your enemy apart at a molecular level. Stop targeted enemy from regenerating health. Weaken armor.

**Rank 1—Recharge Speed:** 8 sec.; Damage: 250; Duration: 10 sec.

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Detonate:** Increase force, damage, and impact radius of combo detonations by 50%

**Rank 5a—Lasting Damage:** Increase damage by 40%; increase duration by 60%

**Rank 5b—Expose:** Increase weapon damage taken by a target by 15%; increase power damage taken by 15% for 10 seconds

**Rank 6a—Pierce:** Increase damage to barriers and armor by 50%. Weaken armored targets by an additional 25%

**Rank 6b—Recharge Speed:** Increase recharge speed by 35%

## Ranks 1 through 3 Analysis

Warp is a cruel and vicious power, perfect to use against Reapers and Cerberus foes alike. Even at low ranks it can deal 300 points of damage on an enemy for up to 10 seconds. You can stop upgrading at Rank 3 and use Warp strictly as a source power for power combinations, but its value goes far beyond simply using it as a source, so consider making Warp one of your go-to skills.

## Rank 4 Analysis

At Rank 4, you can either increase damage (Rank 4a) up to 375 points, a worthwhile investment, or you can add a unique detonate ability (Rank 4b). This benefit is gained only when using Warp as a source power while another power is used to detonate it. When it does, Rank 4b will increase all aspects of the detonation by 50 percent.

## Rank 5 Analysis

Rank 5a, Lasting Damage, increases both damage and duration of Warp, making it deadlier and longer lasting. It may not be fancy, but the selection amplifies two of Warp's three most important components. If you plan on frequently using Warp as a stand-alone attack, then select Rank 5a. Expose, Rank 5b, increases both weapon and power damage to targets affected by Warp. This is useful when you want to weaken enemies and allow your squadmates to inflict additional damage while your powers recharge.

## Rank 6 Analysis

The final upgrade tree in Warp either increases its recharge speed to maximum, lowering the recharge time to 10 seconds (Rank 6b), or increases piercing ability to weaken barriers and armor (Rank 6a). Like Rank 5b, the benefits of Rank 6a allow your squadmates to pour on additional damage to affected enemies. This particular upgrade is perfect when facing Cerberus troopers like Guardians and shielded foes like the geth.

## LIFT GRENADE

Lob this grenade into a group of enemies to send them flying. Deal high damage.

**Rank 1—Lift Grenade:** Damage: 350; Radius: 2 meters; Duration: 4 sec.

**Rank 2—Max Grenades:** Increase grenade capacity by 1

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Radius:** Increase impact radius by 30%

**Rank 5a—Max Grenades:** Increase grenade capacity by 2

**Rank 5b—Duration:** Increase power duration by 50%

**Rank 6a—Slam:** Slam floating targets to the ground as Lift wears off, stunning them for 3 seconds

**Rank 6b—Damage and Radius:** Increases damage and impact radius by 30%

### Ranks 1 through 3 Analysis

A Sentinel's Lift Grenades are a great complement for players who want to focus on enemy disruption. Like Throw, Lift Grenades have the unique ability to remove enemies instantly from behind cover and entrenched positions, and disrupt them while they're on the attack. Incorporate Lift Grenades into your Sentinel's arsenal if you plan on tanking heavily.

### Rank 4 Analysis

At Rank 4, you can choose to increase either the damage output or its damage radius. If you want to concentrate on dishing out maximum damage, choose Rank 4a. However, Rank 4b will increase the impact radius of your grenades, allowing you to affect more enemies. Rank 4b is especially useful when clearing out small groups in narrow spaces.

### Rank 5 Analysis

Rank 5 allows you to either increase the amount of grenades you can carry or increase the duration of the grenades' Lift effects. For players who want to be offensive powerhouses, consider carrying more grenades. Rank 5a will ensure that you always have plenty of grenades for nearly all combat scenarios. Rank 5b, however, will help Sentinels set up better Biotic power combinations. If you plan on using Lift Grenades as a source power, then select this rank upgrade.

### Rank 6 Analysis

At maximum rank, players can either increase damage and radius of their grenades (Rank 6b) or add a Slam effect to the grenades' explosions (Rank 6a). Both upgrades are great at increasing damage output. The Slam effect can stun even the toughest of foes, so be sure that your team is ready to capitalize while the target is incapacitated. If you want to focus on absolute destruction, then select Rank 6a.

## TECH ARMOR (UNIQUE)

Protect yourself with this holographic armor or detonate it to damage nearby enemies. Slow power use.

**Rank 1—Recharge Speed:** 12 sec.; Damage Reduction: 25%; Explosion Damage: 200; Explosion Radius: 3 meters

**Rank 2—Recharge Speed:** Increase recharge speed after armor detonation by 25%

**Rank 3—Damage and Radius:** Increase detonation damage and impact radius by 20%

**Rank 4a—Damage and Radius:** Increase detonation damage and impact radius by 30%

**Rank 4b—Durability:** Increase damage protection by an additional 5%

**Rank 5a—Power Damage:** Increase power damage and force by 20% while armor is active

**Rank 5b—Melee Damage:** Increase melee damage by 30% while the power is active

**Rank 6a—Power Recharge:** Reduce power speed penalty by 30%

**Rank 6b—Durability:** Increase damage protection by an additional 10%

### Ranks 1 through 3 Analysis

Tech Armor is the Sentinel's best unique power. With it, a Sentinel can sustain increased damage while rushing into close-quarters battle or they can absorb long-range fire while moving about the battlefield. Tech Armor's best perk, however, is the ability to detonate into a radial shock wave and damage enemies around it. Though not very powerful at low ranks, the 240 points of damage it inflicts within a 3.6-meter radius (at Rank 3) is more than enough to finish off weakened foes or stun fresh enemies temporarily.

#### TIP

**Because this power, while active, slows power recharge speed, you can keep it off for extra offensive power and turn it on when you need to be more defensive. This makes the Sentinel very flexible.**

### Rank 4 Analysis

At Rank 4a, you can increase the base damage and radius of Tech Armor's explosion to inflict even more damage and reach more enemies. This upgrade is particularly useful for Sentinels who want to use Tech Armor's detonation as a weapon and as a defensive measure. However, Rank 4b will increase Tech Armor's durability. Select Rank 4b to last longer in battle and take more damage. This upgrade is best suited for tanking Sentinels.

### Rank 5 Analysis

At Rank 5, you can choose one of two damage increases: your power damage (Rank 5a) or your melee damage (Rank 5b). Rank 5a is a great choice for any type of Sentinel build. The power increase is great for disrupting enemies and creating powerful Biotic combinations. Rank 5b, however, increases only melee damage. Select this if you plan on wading into close-quarter combat frequently. The increased melee damage will prove useful when trying to clear a path through waves of enemies.

### Rank 6 Analysis

The final rank upgrade is a choice between increasing power recharge (Rank 6a) or durability (Rank 6b). Select Rank 6a if you intend on using other destructive powers as your primary forms of attack. Active Tech Armor slows all your other power cooldowns, and this upgrade decreases that penalty. Sentinels who plan on tanking and wading into multiple foes to clear paths and weaken targets should invest in Rank 6b; the increased durability will allow you to sustain more damage.

## OVERLOAD

Overload electronics with this power surge, stunning your enemy. Effective against shields, barriers, and synthetics. Not as effective against organics.

**Rank 1—Recharge Speed:** 8 sec.; Damage: 220

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Chain Overload:** Hit 1 additional target within 8 meters with 60% less damage

**Rank 4b—Damage:** Increase damage by 30%

**Rank 5a—Neural Shock:** Incapacitate weaker organic enemies for a short duration

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Chain Overload:** Increase damage by 15%. Hit 1 additional target within 8 meters with 60% less damage

**Rank 6b—Shield Damage:** Increase damage to barriers and shields by an additional 100%

## Ranks 1 through 3 Analysis

By far one of the most useful powers against synthetics, Overload can temporarily fry electrical equipment like turrets and single synthetic foes. At Ranks 1 through 3, you gain a standard recharge speed and damage increase, so you could stop upgrading at Rank 3 if you don't plan on making Overload an integral part of your attack arsenal. However, during missions where you encounter geth or other synthetic opponents, you can still prove to be very useful. Tanking Sentinels should use Overload often, as it is a source power and a great way to remove turrets from the equation temporarily.

## Rank 4 Analysis

If you do make Overload a more integral part of your attack arsenal, then consider upgrading Rank 4a. This will increase the amount of targets you can affect by one. So instead of overloading only one enemy at a time, you can stun multiple enemies with each Overload blast. Rank 4b is a standard damage increase. Select this if you want to focus more on dealing damage to individual enemies while tanking.

## Rank 5 Analysis

At Rank 5, you gain the option to stun organic foes as well as synthetics. The Neural Shock ability will expand your role across a number of missions since Overload power will no longer be effective against synthetic targets alone. Rank 5b increases Overload's recharge speed, allowing you to use the skill more frequently in battle. The trade-off between Ranks 5a and 5b are simple: If you want to use Overload against more varied types of enemies, select 5a. If you want to use it more frequently in battle to stun enemies en masse, select Rank 5b.

## Rank 6 Analysis

Like Rank 4a, Rank 6a will increase how many targets you can reach with an Overload blast by one and will increase the damage it inflicts by 15 percent. The choice is simple: If you selected Rank 4a, make the same selection here and you will be able to stun small groups of enemies with one Overload blast. Not only will you incapacitate more enemies at once, but you'll also expend less power to do it. At Rank 6b, you can increase the damage dealt to barriers and shields, becoming extremely effective against all shielded foes.

## CRYO BLAST

Flash-freeze and shatter unprotected enemies. Slow down the rest. Weaken armor. Frozen targets won't regenerate health.

**Rank 1—Recharge Speed:** 4 sec.; Freeze Duration: 4 sec.; Movement Speed: -15%

**Rank 2—Recharge Speed:** Improve recharge speed by 25%

**Rank 3—Duration:** Increase power duration by 40%

**Rank 4a—Duration:** Increase power duration by 60%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Speed Reduction:** Decrease movement speed of chilled targets by an additional 20%

**Rank 5b—Cryo Explosion:** Increase damage to chilled and frozen targets by 10%

**Rank 6a—Recharge Speed:** Increase recharge speed by 50%

**Rank 6b—Frozen Vulnerability:** Increase damage to frozen and chilled targets by 15%; weaken armored targets by an additional 25%

## Ranks 1 through 3 Analysis

By upgrading Cryo Blast to Rank 3, you can increase the duration of freeze effects to nearly 6 seconds while decreasing the recharge speed for the power to 3.2 seconds. That means that if you use Cryo Blast heavily, you can fire a blast nearly every few seconds and freeze enemies for about the same time. So if you time things properly, you can theoretically keep a target frozen indefinitely until the rest of the squad can finish them off. This skill also works as a "source" power for cryo explosions. Once affected by Cryo Blast, targets can then be detonated using a detonator power like Overload. Most importantly, if you plan on creating a Sentinel that can deal damage using primarily powers, invest heavily in Cryo Blast and Warp.

## Rank 4 Analysis

The main benefit of Cryo Blast is that you can slow enemies and potentially freeze them in place, removing them from the equation on the battlefield. At Rank 4, you must choose whether to slow singular enemies for longer periods of time (great against larger, more powerful enemies) or to slow multiple enemies for less time. Make your selection here based on whether you want to focus more on tanking or damage output.

## Rank 5 Analysis

At Rank 5, you can add an explosive effect to Cryo Blast with Rank 5b. Once frozen or chilled, the cryo effects can self-detonate and inflict 10 percent more damage. If tanking is your goal, select Rank 5a. This slows down enemy movement by an additional 20 percent, making foes move 35 percent slower overall. When combined with Rank 4a, the decrease in movement speed makes for an overwhelming advantage on the battlefield. Not only will foes move slower, but also they'll do so for nearly 7 seconds. Rank 5b is perfect for Sentinels who want to focus on ultimate destruction.

## Rank 6 Analysis

Sentinels who want to focus on using more powers over weapons should select Rank 6a. This will increase the recharge speed for Cryo Blast and allow you to use it far more frequently on the battlefield. This is best when trying to focus on explosive power combinations. However, if you want to tank and soften enemies, then select Rank 6b. The Frozen Vulnerability upgrade will weaken foes for your squad to finish off.

## OFFENSIVE MASTERY

Be an expert tactician on and off the battlefield. Faster and stronger powers. More weapon damage. More dexterity. More charisma.

**Rank 1—Reputation Bonus:** 4%; Weapon Damage Bonus: 2.5%; Power Damage Bonus: 5%; Weight Capacity Bonus: 15

**Rank 2—Influence and Capacity:** Increase weight capacity bonus by 20 points; increase reputation bonus by 4%

**Rank 3—Influence and Damage:** Increase power damage and force bonuses by 5%. Increase weapon damage bonus by 2.5%. Increase reputation bonus by 4%.

**Rank 4a—Force and Damage:** Increase force and damage bonuses by 15%

**Rank 4b—Influence and Duration:** Increase duration of all powers by 25%; increase reputation bonus by 8%

**Rank 5a—Squad Bonus:** Increase squadmate weapon damage by 10%; increase the force and damage of squadmate powers by 15%

**Rank 5b—Weight Capacity:** Increase weight capacity bonus by 35 points

**Rank 6a—Force and Damage:** Increase power damage and force bonuses, and power duration by 25%

**Rank 6b—Bonus Power:** Use two powers in a row by giving the first power a 15% chance to cause no cooldown

### Ranks 1 through 3 Analysis

Offensive Mastery should be upgraded for every type of Sentinel build. A Sentinel is built for dealing as much damage as possible in a short amount of time. If a Sentinel stays too long in the midst of enemy fire, then no amount of Tech Armor will be able to sustain the shields long enough. By investing in Offensive Mastery, you can increase the amount of damage you can inflict while in battle and potentially dispatch enemies quicker, before they dispatch you. At Rank 3, the bonuses to weapon and power damage will help do that.

### Rank 4 Analysis

Select Rank 4a if you want to increase the force and damage to your weapons (Rank 4a) and tank a bit more heavily, or choose Rank 4b to increase the duration of your powers. Rank 4b is particularly useful while using powers like Overload and Cryo Blast, so make your choice here dependent on which powers you intend on using in battle.

### Rank 5 Analysis

If you plan on wading into war frequently and anticipate requiring shotguns, assault rifles, and destructive powers, then select Rank 5b. The increased weight capacity will help balance out your weapon loadout and power recharge time. Otherwise, select Rank 5a to grant your squadmates an increase to their powers. This is especially useful for tanks that want to soften foes for the rest of the team to obliterate.

### Rank 6 Analysis

Sentinels who want to create powerful Biotic combinations should invest in Rank 6b. The Bonus Power upgrade will increase the chances of using two powers in a row, like Warp and Overload, without causing a cooldown. For a simple force and damage upgrade, select Rank 6a. This is a good upgrade for nearly any other type of Sentinel build.

## BUILDS

### BULLDOZER

To create a bulldozing Sentinel, focus on amplifying your disruptive powers like Throw, Lift Grenade, and Tech Armor's detonation abilities. Equip a shotgun and you'll be ready to wade into battle, clearing a path for the rest of your squad to follow. This tank build will also allow you to flush out foes from cover and weaken them before the rest of the crew puts them down. To add an extra element of enemy disruption, invest a few upgrade points in Cryo Blast. With it you'll be able to slow enemy movement down as well.

### WRECKING BALL

A Sentinel wrecking ball doesn't focus as much on enemy disruption and tanking as much as it does on utter destruction. Invest your points in weapon damage and powers like Overload, Warp, and Throw. You'll be able to create powerful Biotic combination explosions. Furthermore, with points invested in Cryo Blast, you can freeze enemies as well and use that as a source power too. Invest points in increasing the durability of your Tech Armor rather than its detonation damage, and you'll be able to hold your own in battle a lot longer without needing to recharge your shields.

# SOLDIER

Soldiers are pure combat specialists: No one is more suited to taking down enemies with barrages of gunfire. Soldiers have thorough weapons training and can use all special ammo types as well as grenades. High-level operatives are outfitted with ocular synaptic processors that allow them to focus on targets with lethal accuracy.

In combat, few other classes will thrive as much or as quickly as a Soldier. With power proficiencies that benefit all weapons, a Soldier can rush into battle and excel, whether using a sniper rifle or a pistol. More importantly, a Soldier is better suited to carry all weapon types at once and switch between any of them effectively, creating a disadvantage into an advantage. While all classes can carry all weapon types, nearly all other classes function best with only one or two. A Soldier functions at a high level even with all weapons equipped.

Since Soldiers are true weapon masters, there really is no limit as to how many weapons you should carry. If you want to maximize power recharge speed, you should always lessen the load, of course, but even with a high recharge speed, Soldiers can still make valuable use of their Adrenaline Rush in combat.

## POWERS

### ADRENALINE RUSH (UNIQUE)

Be the fastest fighter on the battlefield. Slow down combat, allowing time to line up the perfect shot. More weapon damage.

- **Rank 1—Recharge Speed:** 8.33 sec.; Duration: 4 sec.; Time Dilation: 50%; Weapon Damage Bonus: 100%
- **Rank 2—Recharge Speed:** Increase recharge speed by 25%
- **Rank 3—Duration:** Increase power duration by 30%
- **Rank 4a—Hardening:** Decrease health and shield damage taken by 20%
- **Rank 4b—Dilation and Damage:** Increase time dilation by 20%; increase weapon damage bonus by 40%
- **Rank 5a—Duration:** Increase power duration by 40%
- **Rank 5b—Melee Damage:** Increase melee damage by 50%
- **Rank 6a—Shield Boost:** Increase shield strength by 50%
- **Rank 6b—Power Use:** Use 1 offensive power while Adrenaline Rush is active

#### Ranks 1 through 3 Analysis

A Soldier's most valuable power, Adrenaline Rush allows you to go into a focused state and slow everything down around you. While everything and everyone moves at a slower rate, you can react at normal speed and get the jump on foes. Even at Rank 3, the increased duration will allow you to stay ahead of your prey up to 5.2 seconds. In battle, where every second counts, this is a huge advantage.

#### Rank 4 Analysis

At Rank 4a, you can choose to increase your toughness while Adrenaline Rush is active. Select this upgrade to sustain more damage while out in the open. If you intend to use Adrenaline Rush infrequently, select this option, as it gives you the most protection, but for a shorter amount of time. Rank 4b will increase your weapon damage and time dilation, allowing you to gain a greater speed advantage from your foes. Soldiers who intend on using Adrenaline Rush more frequently should invest in this option.

#### Rank 5 Analysis

Like Rank 4, the upgrades in Rank 5 depend on whether you intend to use this power frequently in battle. Select Rank 5a, Duration, if you intend on using Adrenaline Rush frequently and need it to last longer. The longer you have a speed advantage, the better you'll be at picking off multiple enemies when needed. Otherwise, select Rank 5b. The increased melee damage will help fend off nearby foes or finish off weakened enemies.

#### Rank 6 Analysis

If you plan on using Adrenaline Rush to launch massive offensive attacks, then select Rank 6b. The extra power use will allow you to lead your attacks with a powerful Concussive Shot and knock enemies off guard. For increased toughness on the battlefield, select Rank 6a. The Shield Boost will strengthen your resistance to damage and allow you to stay in the fight much longer.

## CONCUSSIVE SHOT

Flatten your enemy with a precise blast at short or long range. Effective against barriers.

**Rank 1—Recharge Speed:** 10 sec.;  
Damage: 100; Force: 300 Newtons

**Rank 2—Recharge Speed:** Increase  
recharge speed by 25%

**Rank 3—Force and Damage:** Increase  
force and damage by 20%

**Rank 4a—Force and Damage:** Increase  
force and damage by 30%

**Rank 4b—Radius:** Increase impact radius  
by 1.5 meters

**Rank 5a—Shatter:** Increase force and  
damage to frozen targets by 100%

**Rank 5b—Recharge Speed:** Increase  
recharge speed by 35%

**Rank 6a—Amplification:** Power  
Concussive Shot with the properties of the  
active ammo power, enabling it to burn,  
freeze, disrupt, warp, or pierce armor

**Rank 6b—Shredder:** Increase damage  
to organics by 100% over 10 seconds;  
increase force by 50%

### Ranks 1 through 3 Analysis

Concussive Shot is a lot more than just another burst from your weapon of choice. With a single blast of Concussive Shot, you can disrupt an enemy's progress, knock them down, or deplete their protective barrier. At Rank 3, Concussive Shot can dish out 100 points of damage and 300 Newtons of force. When paired with a source power like a Cryo or Incendiary Ammo, Concussive Shot is the perfect detonator.

### Rank 4 Analysis

Like most other powers with explosive or concussive abilities, the first upgrade choice given is to either increase the power's effects, in this case force and damage (Rank 4a), or increase its radius (Rank 4b). Select your upgrade depending on your eventual build. If you want to become a formidable weapon damage dealer, select Rank 4a. This will inflict more damage per Concussive Shot. By selecting Rank 4b, you can knock more enemies down per shot but inflict less damage. This option is helpful in squads that favor disrupting enemies before killing them.

### Rank 5 Analysis

If you plan on grouping with Cryo-friendly squadmates or frequently using Cryo Ammo, select Rank 5a. Shatter will affect only foes that have been frozen or chilled with Cryo Blast or Cryo Ammo. If you don't favor Cryo users in your squad, then select Rank 5b. The increased recharge speed for Concussive Shot will ensure you're able to knock down enemies all over the battlefield with less time spent waiting for your power to ready.

### Rank 6 Analysis

Like Rank 5a, Rank 6a takes other powers into account in order to function. At Rank 6a, Amplification will power Concussive Shot with ammo powers like Cryo or Warp Ammo. Since you have all ammo power types, Rank 6a will automatically imbue Concussive Shot with the abilities of any ammo power you have active. If you don't plan on using ammo powers often, then select Rank 6b, Shredder. This upgrade adds a damage-over-time effect to every shot and increases the force of each Concussive Shot, allowing you to knock down tougher enemies.

## FRAG GRENADE

Lob this grenade at your enemy, and the shrapnel will take care of the rest. Effective against armor.

**Rank 1—Damage:** 450; Impact Radius:  
5 meters

**Rank 2—Max Grenades:** Increase  
grenade capacity by 1

**Rank 3—Damage:** Increase damage by  
20%

**Rank 4a—Damage:** Increase damage  
by 30%

**Rank 4b—Radius:** Increase impact radius  
by 30%

**Rank 5a—Max Grenades:** Increase  
grenade capacity by 2

**Rank 5b—Bleed Damage:** Increase  
damage to organics by 40% over 10  
seconds

**Rank 6a—Armor-piercing:** Increase  
damage to armor by 50%

**Rank 6b—Shield Overload:** Increase  
damage to shields by 50%

### Ranks 1 through 3 Analysis

Frag Grenades are useful in nearly all combat situations. At Ranks 1 through 3, a well-aimed grenade can serve as a great medium- to long-range weapon. Hurl it ahead of you and inflict damage on unsuspecting foes.

### Rank 4 Analysis

At Rank 4, you can choose to either increase the damage output or its damage radius. If you want to concentrate on dishing out maximum damage, choose Rank 4a. However, Rank 4b will increase the impact radius of your grenade, allowing you to damage more enemies.

### Rank 5 Analysis

Rank 5 allows you to either increase the amount of grenades you can carry or add a bleed effect to all organic targets. For players who want to be offensive powerhouses, consider carrying more grenades. Rank 5a will ensure that you always have plenty of grenades for nearly all combat scenarios. As a Soldier, the more ammunition and explosives you have, the better. Rank 5b can help maximize damage on organic (nonsynthetic) targets. The bleed effect left by grenades can add a significant amount of damage to enemies, especially if you've chosen Rank 4b—increase in impact radius. The drawback to Rank 5b is that it won't affect synthetic targets such as the geth or turrets.

### Rank 6 Analysis

With Frag Grenade at maximum rank, players can either increase armor-piercing abilities or add an EMP pulse to the explosion to affect shields. Both options help further weaken protected enemies, but once again, you must choose whether you'll be weakening organic (armored) or synthetic (shielded) enemies. If you chose Rank 5b—adding a bleed effect—then select Rank 6a to complement your power selection.

## INCENDIARY AMMO

Shoot and your enemy will burst into flames. Increases weapon damage, eats through armor, and can make an enemy panic.

**Rank 1—Health damage:** +10%;  
Armor damage: +10%

**Rank 2—Panic:** Improve the odds of panicking a target by 15%

**Rank 3—Damage:** Increase health and armor damage bonuses by 4%

**Rank 4a—Damage:** Increase health and armor damage bonuses by 6%

**Rank 4b—Squad Bonus:** Squadmates gain Incendiary Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshots:** Increase headshot damage by 25%

**Rank 6a—Damage:** Increase health and armor damage bonuses by 10%

**Rank 6b—Explosive Burst:** Ignite enemies with an intermittent explosion that covers 2.5 meters for 100 damage

### Ranks 1 through 3 Analysis

Incendiary Ammo is a great power for a damage-dealer because it makes all weapon fire even more lethal. With Incendiary Ammo (or any Ammo power, in fact), it's best to activate it before every mission and make sure you keep it active at all times. When active, it extends damage over time and sets enemies ablaze. It also functions as a "source" power that can be detonated using other powers like Concussive Shot or Frag Grenades.

### Rank 4 Analysis

At Rank 4, Incendiary Ammo can increase damage to health and armor (Rank 4a), or you can gain the ability to automatically grant it to all squadmates when active (Rank 4b). The choice really breaks down to whether you want to tank and dish out as much damage as you can or whether you will hang back as part of the squad. If your squadmates don't have any ammo powers available to them, select Rank 4b to grant them use of yours. Otherwise, select Rank 4a and increase your ability to inflict as much damage as possible.

### Rank 5 Analysis

At Rank 5, you can select to either carry 30 percent more ammunition or to increase headshot damage by 25 percent. To make the best use of this selection, take into account what types of weapons you will be using the most. If you plan on using weapons like sniper rifles or assault rifles with high accuracy, select Rank 5b. If you prefer to serve as the team's tank, equip yourself with a shotgun and select Rank 4a. You'll benefit from the increased ammunition count when engaging enemies in close combat—the shotgun's best range.

### Rank 6 Analysis

Both options in Rank 6 increase Incendiary Ammo's damage output. Rank 6a increases health and armor damage across the board. This makes all shots with Incendiary Ammo more powerful since it's a good general increase to overall damage. Rank 6b adds an entirely new effect to shots taken using Incendiary Ammo. Instead of simply dealing more damage to health and armor, it ignites enemies and explodes, causing more damage in a wider radius and reaching more enemies nearby. Your Rank 6 option should depend on whether you want to take down enemies one at a time or if you want to soften groups of enemies for the rest of your squad to finish off.

## DISRUPTOR AMMO

Bring down your enemy's barriers and shields. Chance to stun. More weapon damage. More damage to shields and barriers.

**Rank 1—Health Damage Bonus:** +5%; Shield and Barrier Damage: +20%

**Rank 2—Stun:** Improve the odds of stunning a target by 15%

**Rank 3—Damage:** Increase health damage bonus by 2%; increase shield and barrier damage bonuses by 8%

**Rank 4a—Damage:** Increase health damage bonus by 3%; increase shield and barrier damage bonuses by 12%

**Rank 4b—Squad Bonus:** Squadmates gain Disruptor Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 25%

**Rank 6a—Damage:** Increase health damage bonus by 5%; increase shield and barrier damage bonuses by 20%

**Rank 6b—Stun:** Improve the odds of stunning a target by 25%

### Ranks 1 through 3 Analysis

Disruptor Ammo is a great power for a weapon master because it makes all weapon fire even more lethal. With Disruptor Ammo (or any Ammo power, in fact), it's best to activate it before every mission and make sure you keep it active at all times. When active, it adds the ability to stun foes and incapacitate them before they can attack. It also functions as a "source" power that can be detonated using other powers like Incinerate. For a Soldier, Disruptor Ammo can prove to be very effective in softening up foes before leaving them for the rest of the squad to wipe out.

### Rank 4 Analysis

At Rank 4, Disruptor Ammo can either increase damage to health and shield/barriers (Rank 4a), or you can gain the ability to automatically grant it to all squadmates when active (Rank 4b). The choice really breaks down to whether you want to dish out as much damage as you can or whether you want to stalk stunned enemies on the battlefield. By granting your squadmates the use of your Disruptor Ammo, you'll increase the number of enemies that are stunned on the battlefield. This will make it easier to finish them off with shotgun or pistol blasts at any range.

### Rank 5 Analysis

At Rank 5, you can select to either carry 30 percent more ammunition or to increase headshot damage by 25 percent. To make the best use of this selection, take into account what type of Soldier you're building. If you plan on using sniper rifles often, Rank 5b should be an obvious choice. However, if you plan on being a close-quarters combatant who prefers a shotgun and melee to the sniper rifle, then select Rank 5a. The added ammunition count will help, especially with shotguns that tend to carry low ammo.

### Rank 6 Analysis

Both options in Rank 6 increase Disruptor Ammo's damage output. However, Rank 6a increases damage to health, barriers, and shields, depending on the enemy. This makes all shots with Disruptor Ammo more powerful since it's a good general increase to overall damage. Rank 6b adds an entirely new effect to shots taken using Disruptor Ammo. Instead of simply dealing more damage to health, shields, and barriers, it stuns enemies and incapacitates them, allowing your team to then take them out. Your Rank 6 option should depend on whether you want to take down enemies one at a time or if you want to incapacitate them before wiping them out with Frag Grenades or other weapon fire.

## CRYO AMMO

Flash-freeze and shatter unprotected enemies. Slow down the rest. Weaken armor. Frozen targets won't regenerate health.

**Rank 1—Freeze Duration:** 3 sec.; Movement Speed: -15%; Armor Weakening: -25%

**Rank 2—Freeze Chance:** Improve the odds of freezing a target by 30%

**Rank 3—Freeze Duration:** Increase freeze duration by 40%

**Rank 4a—Freeze Duration:** Increase freeze duration by 40%

**Rank 4b—Squad Bonus:** Squadmates gain Cryo Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 35%

**Rank 6a—Freeze Chance:** Improve the odds of freezing a target by 50%; decrease a frozen target's movement speed by an additional 20%

**Rank 6b—Damage Combo:** Increase damage to frozen targets from all sources by 50%; weaken the armor of chilled targets by 25%

### Ranks 1 through 3 Analysis

Cryo Ammo is a perfect tool for sniper-proficient Soldiers. Its freezing abilities can slow targets or even instantly shatter them if you get a headshot. However, even if you don't plan on sniping and instead use it with pistols, SMGs, or shotguns, the slowing effects of Cryo Ammo can give a Soldier enough time to move on to the next target and weaken them as well. When coupled with Adrenaline Rush, Cryo Ammo can render small groups of enemies into frozen, harmless ice sculptures.

### Rank 4 Analysis

At Rank 4, Disruptor Ammo can either increase duration (Rank 4a) or you can gain the ability to automatically grant it to all squadmates when active (Rank 4b). Like Disruptor or Incendiary Ammo Rank 4 upgrade options, you can select Rank 4b in order to give your teammates a chance at freezing foes as well. This will benefit Soldiers by allowing them to zoom in on frozen enemies or rush them and shatter them with a melee blow. By selecting Rank 4a, you can ensure that enemies will stay frozen longer after sustaining a shot with Cryo Ammo.

### Rank 5 Analysis

This rank upgrade is no different than ammo powers' Rank 5 upgrades. You can select to either carry 30 percent more ammunition or increase headshot damage by 25 percent. To make the best use of this selection, take into account what type of Soldier you're building. If you've chosen the other headshot upgrades, select this one as well. Otherwise, stick with the increased ammunition count.

### Rank 6 Analysis

At Rank 6, you can either increase how effective Cryo Ammo is as a stand-alone damage-dealing power (Rank 6a) or increase damage to frozen enemies with all other attacks (Rank 6b). If you plan to obliterate enemies with one shot, such as a sniper rifle shot or a single shotgun blast to the face, then select Rank 6a. Soldiers who plan to weaken foes for the rest of the group should invest in Rank 6b.

## COMBAT MASTERY

Be an expert tactician on and off the battlefield. More speed. More strength. More charisma.

**Rank 1—Reputation Bonus:** 4%; Weapon Damage Bonus: 5%; Weight Capacity Bonus: 20

**Rank 2—Influence and Damage:** Increase weapon damage bonus by 5%; increase reputation bonus by 4%

**Rank 3—Influence and Capacity:** Increase weight capacity bonus by 30 points; increase reputation bonus by 4%

**Rank 4a—Damage:** Increase weapon damage by 5%; increase power damage by 10%

**Rank 4b—Influence and Duration:** Increase duration of all powers by 25%; increase reputation bonus by 8%

**Rank 5a—Squad Bonus:** Increase squadmate weapon damage by 20%

**Rank 5b—Headshots:** Increase headshot damage by 20%

**Rank 6a—Weight Capacity:** Increase weight capacity bonus by 50 points

**Rank 6b—Weapon Master:** Increase weapon damage bonus by 10%; increase damage of all ammo powers by 40%

### Ranks 1 through 3 Analysis

The increased weight capacity in Combat Mastery will make it easier for you to carry every kind of weapon at once. As a weapon master, you should be able to carry every kind of weapon and switch between them with ease. Invest in this passive skill early in your career to maximize its potential.

### Rank 4 Analysis

At this rank, you can begin to shape your Soldier build into either a full-on weapon master or a Soldier who relies more heavily on Adrenaline Rush (see suggested builds). To maximize weapon damage, select Rank 4a. The damage increase to both weapon and powers will increase your destructive abilities on the battlefield. Rank 4b will increase the duration of all other powers like Adrenaline Rush. Select this upgrade if you intend on using it often in battle.

### Rank 5 Analysis

Rank 5a will grant teammates increases in weapon damage. This will prove useful for Soldiers who rely on squad support the most. For example, if you plan on sniping and need your team to bear the burden of keeping enemy fire off you, select this upgrade. Rank 5b will increase your headshot damage. If you plan on using sniper or assault rifles, select this upgrade.

### Rank 6 Analysis

Both options in Rank 6 will allow you to make the best use of your weapons. However, Rank 6a will increase your weight capacity in order to carry as many weapons as possible and, as a result, increase your power recharge speed. If you don't plan on using powers often, then select Rank 6b, Weapon Master, and increase all weapon and power damage significantly.

## BUILDS

## WEAPON MASTER

A weapon master Soldier relies on all weapons equally. As the name implies, this build is a master of all weapons, capable of switching back and forth between them to whatever is most useful at the time. This build relies heavily on weapon damage; as a result, power damage takes a backseat. Invest in Adrenaline Rush, Concussive Shot (to weaken foes), Frag Grenades, and all upgrades that affect weapon damage. With more weapons equipped, you'll have a lower power recharge speed, so you won't be able to use powers like Concussive Shot or Adrenaline Rush frequently. Luckily, you won't have to. Compensate for this by also investing in every ammo power. You can activate ammo powers once before battle (or switch between them during battle) and not suffer any power recharge penalty.

## ADRENALINE JUNKIE

Adrenaline junkies rely heavily on Adrenaline Rush, using it nearly every minute during battle. To thrive with this build, invest heavily in Adrenaline Rush and any upgrades that increase power duration and weight capacity. That way, you can minimize your recharge speed penalty and activate Adrenaline Rush as often as you need to. Keep your assault rifle ready to inflict damage at all ranges, and upgrade Concussive Shot as well as Cryo Ammo to disrupt enemies on the battlefield. When upgraded to Rank 6b of Adrenaline Rush, you can launch devastating Concussive Shot attacks while time is slowed and follow up with Cryo Ammo-enabled assault rifle fire. As soon as Adrenaline Shot wears off, activate it again to keep a leg up on the opposition.

## VANGUARD

Vanguards are feared for their high-risk, high-reward combat style, closing in quickly on enemies and destroying them at short range with weapons and Biotic abilities. They are outfitted with L5n implants, enabling them to perform a Biotic charge that strikes the opponent with incredible force while bringing the Vanguard in for close-range combat.

The Vanguard is a powerful class. A one-person wrecking ball, the Vanguard has a talent for quick, close-quarter combat that is unparalleled. In battle, a Vanguard relies heavily on two powers, Biotic Charge and Nova. With Biotic Charge, the Vanguard can travel across the battlefield in the blink of an eye and instantly attack a target.

With the ability to close in quickly on foes, a Vanguard can benefit from strong close-quarter weapons like shotguns. However, assault rifles and SMGs are also a great complement to the damaging range and power of this class.

## POWERS

### INCENDIARY AMMO

Shoot and your enemy will burst into flames. Increases weapon damage, eats through armor, and can make an enemy panic.

**Rank 1—Health damage:** +10%; **Armor damage:** +10%

**Rank 2—Panic:** Improve the odds of panicking a target by 15%

**Rank 3—Damage:** Increase health and armor damage bonuses by 4%

**Rank 4a—Damage:** Increase health and armor damage bonuses by 6%

**Rank 4b—Squad Bonus:** Squadmates gain Incendiary Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshots:** Increase headshot damage by 25%

**Rank 6a—Damage:** Increase health and armor damage bonuses by 10%

**Rank 6b—Explosive Burst:** Ignite enemies with an intermittent explosion that covers 2.5 meters for 100 damage

#### Ranks 1 through 3 Analysis

Incendiary Ammo is a great power for a damage-dealer because it makes all weapon fire even more lethal. With Incendiary Ammo (or any Ammo power, in fact), it's best to activate it before every mission and make sure you keep it active at all times. When active, it extends damage over time and sets enemies ablaze. It also functions as a "source" power that can be detonated using other powers like Biotic Charge.

#### Rank 4 Analysis

At Rank 4, Incendiary Ammo can either increase damage to health and armor (Rank 4a), or you can gain the ability to automatically grant it to all squadmates when active (Rank 4b). The choice really breaks down to whether you want to tank and dish out as much damage as you can or whether you will hang back as part of the squad. If your squadmates don't have any ammo powers available to them, select Rank 4b to grant them use of yours. Otherwise, select Rank 4a and increase your ability to inflict as much damage as possible.

#### Rank 5 Analysis

At Rank 5, you can select to either carry 30 percent more ammunition or to increase headshot damage by 25 percent. To make the best use of this selection, take into account what types of weapons you will be using the most. If you plan on using weapons like sniper rifles or assault rifles with high accuracy, then select Rank 5b. If you prefer to serve as the team's tank, equip yourself with a shotgun and select Rank 5a. You'll benefit from the increased ammunition count when engaging enemies in close combat, the shotgun's best range.

#### Rank 6 Analysis

Both options in Rank 6 increase Incendiary Ammo's damage output. However, Rank 6a is for a health and armor damage increase across the board. This makes all shots with Incendiary Ammo more powerful since it's a good general increase to overall damage. Rank 6b adds an entirely new effect to shots taken using Incendiary Ammo. Instead of simply dealing more damage to health and armor, it ignites enemies and explodes, causing more damage in a wider radius and reaching more enemies nearby. Your Rank 6 option should depend on whether you want to take down enemies one at a time or if you want to soften groups of enemies for the rest of your squad to finish off.

### CRYO AMMO

Flash-freeze and shatter unprotected enemies. Slow down the rest. Weaken armor. Frozen targets won't regenerate health.

**Rank 1—Freeze Duration:** 3 sec.; **Movement Speed:** -15%; **Armor Weakening:** -25%

**Rank 2—Freeze Chance:** Improve the odds of freezing a target by 30%

**Rank 3—Freeze Duration:** Increase freeze duration by 40%

**Rank 4a—Freeze Duration:** Increase freeze duration by 40%

**Rank 4b—Squad Bonus:** Squadmates gain Cryo Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 35%

**Rank 6a—Freeze Chance:** Improve the odds of freezing a target by 50%; decrease a frozen target's movement speed by an additional 20%

**Rank 6b—Damage Combo:** Increase damage to frozen targets from all sources by 50%; weaken the armor of chilled targets by 25%

#### Ranks 1 through 3 Analysis

Cryo Ammo is a perfect tool for pistol-toting Vanguard. Its freezing abilities can slow targets or even instantly shatter them if you get a headshot. However, even if you don't plan on going for headshots and instead use the power with pistols, SMGs, or shotguns, then the effects of Cryo Ammo can slow an enemy just enough for you to finish them off with a Biotic Charge or Nova blast.

#### Rank 4 Analysis

At Rank 4, Cryo Ammo can increase duration (Rank 4a), or you can gain the ability to automatically grant it to all squadmates when active (Rank 4b). Like Disruptor Ammo's or Incendiary Ammo's Rank 4 upgrade options, you can select Rank 4b to give your teammates a chance at freezing foes as well. This will benefit a Vanguard build, allowing your team to freeze foes on the battlefield, making it easier for you to rush in and kill them. By selecting Rank 4a, you can ensure that enemies will stay frozen longer after sustaining a shot with Cryo Ammo.

#### Rank 5 Analysis

This rank upgrade is no different than other ammo powers' Rank 5 upgrades. You can select to either carry 30 percent more ammunition or to increase headshot damage by 25 percent. To make the best use of this selection, consider what type of Vanguard you're building. If you've chosen the other Headshot upgrades, select this one as well. Otherwise, stick with the increased ammunition count.

#### Rank 6 Analysis

At Rank 6, you can either increase how effective Cryo Ammo is as a stand-alone damage-dealing power (Rank 6a) or increase damage to frozen enemies with all other attacks (Rank 6b). If you want to obliterate enemies with one shot, such as a sniper rifle shot or a single shotgun blast to the face, then select Rank 6a. Vanguard who plan to weaken foes for the rest of the group should invest in Rank 6b.

## PULL

Yank an opponent helplessly off the ground.

**Rank 1—Recharge Speed:** 4 sec.; Duration: 4 sec.

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration:** Increase duration by 40%

**Rank 4a—Duration:** Increase duration by 60%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Lift Damage:** Inflict 20 damage per second to lifted targets

**Rank 5b—Expose:** Increase all damage to targets lifted by Pull by 25%

**Rank 6a—Double Pull:** Launch two Pull projectiles to seek two targets instead of one

**Rank 6b—Recharge Speed:** Increase recharge speed by 50%

## Ranks 1 through 3 Analysis

For a class that can rush an enemy instantly, it may be a bit odd having a power that can yank enemies closer to you. However, this is extremely helpful when trying to disrupt enemy movement on the battlefield. Use Pull on a nearby foe to knock him off balance, then use Nova or Biotic Charge on another foe to create some distance. Alternate between targets like this and no enemy will have a steady enough hand to take a shot.

## Rank 4 Analysis

At Rank 4, you can increase the duration of Pull to knock enemies off balance for 60 percent longer (Rank 4a), or its radius can affect more nearby enemies (Rank 4b). If you want to focus on enemy disruption, then select Rank 4b. The ability to affect more enemies can help your squad in nearly any combat situation. However, increasing the duration of the Pull effect will grant you more time to use Pull as a source power and trigger more explosive Biotic combos.

## Rank 5 Analysis

Select Rank 5a to inflict additional damage on lifted targets, or choose Rank 5b to augment all damage on targets affected by lift. If you frequently group with a squadmate who uses Singularity, select Rank 5b. If you want to focus on power damage, select Rank 5a.

## Rank 6 Analysis

Like Throw, Pull also has an upgrade option that allows you to affect two targets rather than one. Select Rank 6a to increase the disruptive abilities of your Pull power. After all, more enemies off balance means less enemies that can attack. Alternatively, if you want to use Pull more frequently on the battlefield, select Rank 6b. The increased recharge speed will lower the amount of time it takes before you can launch it again.

## BIOTIC CHARGE (UNIQUE)

Smash into a target while encased in a Biotic barrier, leveling your opponents. Invulnerable while this power is in effect.

**Rank 1—17.5 sec.; Damage:** 250; Force: 500 Newtons; Barrier Restored: 50%

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Force and Damage:** Increase damage and force by 20%

**Rank 4a—Force and Damage:** Increase damage and force by 30%

**Rank 4b—Radius:** Hit up to 2 additional targets within 2 meters of the impact point

**Rank 5a—Weapon Synergy:** Increase weapon damage by 15% for 3 seconds after a successful Biotic Charge

**Rank 5b—Power Synergy:** Increase power damage by 25% for 15 seconds after a successful Biotic Charge

**Rank 6a—Bonus Power:** Give Biotic Charge a 25% chance of not triggering a cooldown

**Rank 6b—Barrier:** Increase barriers by an additional 50% after a successful Biotic Charge

## Ranks 1 through 3 Analysis

A Vanguard's bread and butter, Biotic Charge can close the gap between a foe instantly, knocking him away or even obliterating him with a single blast. It is useful as a stand-alone attack but can also be used to set up other attacks like Nova or heavy (charged) melee blows. Best of all, when taking damage, use Biotic Charge to get away from enemy fire and simultaneously replenish your shields.

## Rank 4 Analysis

If you want to use Biotic Charge as a stand-alone attack to flatten one enemy at a time, select Rank 4a. To widen the Charge's reach, select Rank 4b. The increased reach of the Biotic impact will hit two more foes within 2 meters. Rank 4b won't inflict as much damage, but since you can reach more enemies you'll be able to wreak more havoc on the battlefield.

## Rank 5 Analysis

At Rank 5 you must choose which other types of attacks you will rely on. Since Vanguard's can excel at either power or weapon combat, choose which style you prefer to use in battle. For example, if you will follow Biotic Charge with a shotgun blast, select Rank 5a. If instead you prefer to use Nova to follow up a Biotic Charge, then select Rank 5b. There's no reason you can't follow up a Biotic Charge with both a weapon blast and a power. But one must come first. Make your choice here based on which attack will immediately follow the Biotic Charge.

## Rank 6 Analysis

Rank 6a will grant you a 25 percent chance to not experience any recharge penalty. This will allow you to instantly follow up with another power usage, like another Biotic Charge, Nova, or Pull. This upgrade choice is best for Vanguard players who plan on using a lot of power combinations. If you want to maintain 50 percent of your barriers, rather than deplete them all after using a Biotic Charge, then select Rank 6b. This will also help when following up with a Nova blast immediately afterward.

## SHOCKWAVE

Topple a row of enemies with this cascading shockwave.

**Rank 1—Recharge Speed:** 8 sec.; Damage: 200; Force: 600 Newtons; Radius: 2 meters; Range: 7 meters

**Rank 2—Recharge Speed:** Increase recharge speed by 20%

**Rank 3—Force and Damage:** Increase force and damage by 20%

**Rank 4a—Force and Damage:** Increase force and damage by 30%

**Rank 4b—Radius:** Increase impact radius by 35%

**Rank 5a—Detonate:** Increase force and damage of Biotic detonations by 50%

**Rank 5b—Reach:** Increase the distance that Shockwave cascades by 50%

**Rank 6a—Recharge Speed:** Increases recharge speed by 35%

**Rank 6b—Lifting Shockwave:** Suspends targets in the air for a short time

### Ranks 1 through 3 Analysis

Shockwave is another disruptive ability in a Vanguard's arsenal. Like Throw, it can hurl enemies out of the way and clear a path forward. Unlike Throw, however, this power doesn't stop at affecting one or two enemies. It also does not travel around objects or other enemies. Shockwave travels in a straight line and for a long distance, affecting all enemies in its path. This makes it a particularly useful power for Vanguards who want to focus on disruption rather than destruction. Of course, Shockwave is also a detonator power, so it can be used to trigger explosive combos as well.

### Rank 4 Analysis

Like most other powers, you can select to either increase the force and damage (Rank 4a) to inflict more damage on enemies and hurl them farther, or increase its radius (Rank 5b), allowing each Shockwave to reach more enemies. Your choice depends on whether you want to cause more damage or disrupt more enemies.

### Rank 5 Analysis

If you select Rank 5a, you can increase the force and damage of Biotic combinations when using Shockwave as a detonator power. Select this if you plan on often using Shockwave as part of explosive biotic combos. If you plan on using Shockwave as a disruptive ability only, then select Rank 5b. This will let the Shockwave travel farther before it dissipates.

### Rank 6 Analysis

At Rank 6a, you can increase the recharge speed of Shockwave in order to use it more frequently. At Rank 6b, you can add an additional "lift" ability to raise affected foes off the ground for a short time. While this may not seem like a big deal, the additional lift ability will help combo off power upgrades like Pull's Lift upgrades.

## NOVA (UNIQUE)

Transfer the energy of your Biotic barrier to charge and spark this deadly blast. Barrier strength determines blast density.

**Rank 1—Damage:** 350; Force: 450 Newtons; Radius: 4 meters

**Rank 2—Radius:** Increase impact radius by 25%

**Rank 3—Force and Damage:** Increase damage and force by 30%

**Rank 4a—Force and Damage:** Increase damage and force by 40%

**Rank 4b—Radius:** Increase impact radius by 40%

**Rank 5a—Power Recharge:** Increase recharge speed of all powers by 25% for 15 seconds

**Rank 5b—Half Blast:** Gain the option to use Nova two times in a row by reducing its barrier consumption by 50% but at the cost of reducing damage and force by 40%

**Rank 6a—Pierce:** Increase damage to barriers, shields, and armored targets by 100%

**Rank 6b—Sustain:** Nova gains a 25% chance of not using up barriers

### Ranks 1 through 3 Analysis

Nova is a great power to use as a lead-in attack or is a perfect complement to attack combos that start with Biotic Charge. When you unleash this power, you use up your barriers and transfer their charge into a powerful radial shock wave that knocks enemies away from you. Alone, this power can leave you at a vulnerable disadvantage. However, when coupled with Biotic Charge, which replenishes shields, you'll have an unstoppable one-two combination. If you plan on using Nova as a stand-alone attack, then at least upgrade to Rank 3, where you'll gain a power capable of dealing 455 points of damage across a 5-meter radius.

### Rank 4 Analysis

At Rank 4a, you can increase the force and damage that your Nova attack unleashes. This will increase the damage to nearly 600 points of damage per blast. This upgrade is best for people who want to focus primarily on damage-dealing. To concentrate more on disrupting foes, select Rank 4b. The increase in radius will allow you to reach farther at the point of impact and knock away more enemies.

### Rank 5 Analysis

Rank 5a is a straightforward power recharge upgrade for all powers. After using Nova, all powers will recharge 25 percent faster for 15 seconds. That means you can link together power combos for 15 seconds after the Nova blast, with increased efficiency. This is an obvious choice for players who will concentrate mainly on power combinations while rushing about the battlefield. Rank 5b, however, reduces Nova's barrier consumption by half (and its damage and force by 40 percent). The upside, though, is that you gain the ability to launch Nova twice in a row before completely depleting your shields.

### Rank 6 Analysis

For Vanguard players who want to increase damage on protected enemies, Rank 6a is an easy choice. The increase in piercing damage is perfect for pesky foes that have shields, barriers, and armor. Sustain, Rank 6b, gives you a 25 percent chance to not use any barriers at all. Between this upgrade and Rank 5b, tricky Vanguards will be able to unleash a devastating string of Nova blasts on unsuspecting enemies until they're dead.

## ASSAULT MASTERY

Be an expert tactician on and off the battlefield. Faster and stronger powers. More weapon damage. More dexterity. More charisma.

**Rank 1—Reputation Bonus:** 4%; Weapon Damage Bonus: 2.5%; Power Damage Bonus: 5%; Weight Capacity Bonus: 15

**Rank 2—Influence and Capacity:** Increase reputation bonus by 4%; increase weight capacity by 20 points

**Rank 3—Influence and Damage:** Increase power damage bonus by 5%; increase weapon damage bonus by 2.5%; increase reputation bonus by 4%

**Rank 4a—Damage:** Increase weapon damage by 5%; increase power damage by 10%

**Rank 4b—Influence and Force:** Increase force bonus by 30%; increase reputation bonus by 8%

**Rank 5a—Squad Bonus:** Increase squadmate weapon damage by 10%; increase power damage by 15%

**Rank 5b—Weight Capacity:** Increase weight capacity bonus by 35 points

**Rank 6a—Shotgun Damage:** Increase shotgun damage by 15%

**Rank 6b—Power Intensity:** Increase power damage bonus by 25%; increase power duration and force by 25%

### Ranks 1 through 3 Analysis

The increased weight capacity in Assault Mastery will make it easier for you to carry heavier weapons like shotguns. For Vanguard's who want to focus on weapon damage, this passive power is a must.

### Rank 4 Analysis

At this rank, you can choose to either increase damage output (Rank 4a) or force and reputation bonus (Rank 4b). Vanguard's who want to maximize their destructive capabilities with weapons and powers should invest in Rank 4a. If you want to make better use of the force from your powers like Throw, Shockwave, and Biotic Charge, then select Rank 4b.

### Rank 5 Analysis

Rank 5a will grant teammates increases in power and weapon damage. This will prove useful for Vanguard's who rely on squad support the most. For example, if you want your team to keep enemies engaged while you rush across the battlefield, select this upgrade. Rank 5b will increase your weight capacity, allowing you to carry heavier weapons while keeping your power recharge speed low. Invest in Rank 5b in order to be able to launch Biotic Charge and other powers in quick succession.

### Rank 6 Analysis

Vanguard builds that will make frequent use of the shotgun (see builds below) should invest in Rank 6a. The increase to shotgun damage is critical. However, if you will follow your Biotic Charge with power attacks like Nova, then select Rank 6b, as this rank upgrade's increase to power damage, duration, and force will help power combinations the most.

## BUILDS

### CHARGER: POWER COMBO

All Vanguard builds should begin with Biotic Charge as their main power. This is the skill that will inflict the most damage up front and serve as the lead-in to your follow-up attacks. Invest in Biotic Charge, Nova, Shockwave, and any melee-related upgrades. That way, you can rush in for the attack with Biotic Charge and follow up with Nova. Since Nova will deplete your shields, you can immediately follow up with Biotic Charge again to replenish your shields. When facing tough enemies like Brutes, you can also follow Nova with a charged melee blow while enemies are staggered. Once upgraded to a high level, Vanguard's can single-handedly destroy Brutes and Banshees using Biotic Charge/Nova/melee combos.

### CHARGER: WEAPON DAMAGE

If you'd rather not rely on powers and prefer weapon damage, then instead invest points in Biotic Charge, Pull, and both ammo powers. Activate your ammo powers, then use Biotic Charge to rush foes. Once staggered, follow up with powerful shotgun blasts at close range to inflict maximum damage. If they try to get away or if Biotic Charge flings them too far away, then follow up with Pull to bring them in close and blast them with the shotgun again.

# ASHLEY WILLIAMS

Lieutenant Commander Ashley Williams is a career military officer with the Systems Alliance. Born in 2158 to a military family, Williams enlisted directly out of high school, splitting time between Earth and hostile environment training on Titan. After earning numerous commendations early in her career, Williams became a platoon guide on Eden Prime, where she was the only member of her unit to survive the geth attack.

Williams then served as gunnery chief under Commander Shepard on the SSV *Normandy* and was promoted to lieutenant commander after the Battle of the Citadel. More recently, an Alliance tribunal called on Williams to testify about her experience with the Reapers.

## PREVIOUSLY IN MASS EFFECT

Ashley is a returning character from *Mass Effect 1* and *Mass Effect 2*. Part of Shepard's crew in ME1, she's returning again to join Shepard's crew. However, she's increasingly suspicious of Shepard's methods. Shepard must regain the trust of this old friend (and potential former lover).

## NOTE

You can recruit either Kaidan or Ashley to your crew based on your Crew Loss decision at the beginning of the game. You cannot recruit both.

Uniform 1

Uniform 2

## TACTICAL ROLE

Ashley is a good soldier. As a rifle-proficient squadmate, she prefers to stay between mid- to long-range, depending on which rifle is her primary weapon. She's well rounded enough to be a squad mainstay when carrying an assault rifle as her primary weapon, but her Marksman and Alliance Officer powers can also make her a skilled sniper if you need a specialized soldier during tough missions.

Even though she may not look as tough and rugged as someone like James, she is also capable of occasionally tanking. Upgrade powers like Concussive Shot, Alliance Officer, and Inferno Grenades, and she'll be able to march forward, causing damage wherever she goes. If you want to make her a well-balanced soldier, consider upgrading her powers equally as much as possible. She won't excel in power damage, but her weapon damage and toughness will complement nearly any squad composition.

## POWERS

## CONCUSSIVE SHOT

Flatten your enemy with a precise blast at short or long range. Effective against barriers.

**Rank 1—Recharge Speed:** 10 sec.; Damage: 100; Force: 300 Newtons

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Force and Damage:** Increase force and damage by 20%

**Rank 4a—Force and Damage:** Increase force and damage by 30%

**Rank 4b—Radius:** Increase impact radius by 1.5 meters

**Rank 5a—Shatter:** Increase force and damage to frozen targets by 100%

**Rank 5b—Recharge Speed:** Increase recharge speed by 35%

**Rank 6a—Amplification:** Power Concussive Shot with the properties of the active ammo power, enabling it to burn, freeze, disrupt, warp, or pierce armor

**Rank 6b—Shredder:** Increase damage to organics by 100% over 10 seconds; increase force by 50%

## Ranks 1 through 3 Analysis

Concussive Shot is a lot more than just another burst from your weapon of choice. With a single blast of Concussive Shot, you can disrupt an enemy's progress, knock them down, or deplete their protective barrier. At Rank 3, Concussive Shot can dish out 100 points of damage and 300 Newtons of force. When paired with a source power like Incinerate, Concussive Shot is the perfect detonator.

## Rank 4 Analysis

Like most other powers with explosive or concussive abilities, the first upgrade choice is to either increase the power's effects, in this case force and damage (Rank 4a), or increase its radius (Rank 4b). Select your upgrade based on Ashley's eventual build. If you want to shape her into a formidable weapon damage dealer, select Rank 4a. This will inflict more damage per Concussive Shot. By selecting Rank 4b, she can knock more enemies down per shot but inflict less damage. This option is helpful in squads that favor disrupting enemies before killing them.

## Rank 5 Analysis

If you plan on grouping Ashley with Cryo-friendly squadmates, select Rank 5a. Shatter will affect only those foes that have been frozen or chilled using Cryo Blast or Cryo Ammo. If you don't favor Cryo users in your squad, then select Rank 5b. The increased recharge speed for Concussive Shot will ensure you're able to knock down enemies all over the battlefield with less time spent waiting for your power to ready.

## Rank 6 Analysis

Like Rank 5a, Rank 6a takes other powers into account in order to function. At Rank 6a, Amplification will power Concussive Shot with ammo powers like Cryo or Warp Ammo. Since Ashley also has Disruptor Ammo, Rank 6a will automatically imbue Concussive Shot with disruptor abilities when Disruptor Ammo is active. However, when paired with squadmates like James who are capable of giving squadmates Incendiary Ammo, this upgrade will also imbue those ammo effects on each Concussive Shot. If you vary your squad composition often, then you may not be paired with squadmates like James often enough to benefit from Rank 6a. In that case, select Rank 6b, Shredder. This upgrade adds a damage-over-time effect to every shot and increases the force of each Concussive Shot, allowing you to knock down tougher enemies.

## DISRUPTOR AMMO

Bring down your enemy's barriers and shields. Chance to stun. More weapon damage. More damage to shields and barriers.

**Rank 1—Health Damage Bonus:** +5%; Shield and Barrier Damage: +20%

**Rank 2—Stun:** Improve the odds of stunning a target by 15%

**Rank 3—Damage:** Increase health damage bonus by 2%. Increase shield and barrier damage bonuses by 8%

**Rank 4a—Damage:** Increase health damage bonus by 3%; increase shield and barrier damage bonuses by 12%

**Rank 4b—Squad Bonus:** Squadmates gain Disruptor Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 25%

**Rank 6a—Damage:** Increase health damage bonus by 5%; increase shield and barrier damage bonuses by 20%

**Rank 6b—Stun:** Improve the odds of stunning a target by 25%

## Ranks 1 through 3 Analysis

Disruptor Ammo is a great power for a damage dealer like Ashley because it makes all weapon fire even more lethal. With Disruptor Ammo (or any Ammo power, in fact), it's best to activate it before every mission and make sure you keep it active at all times. When active, it adds the ability to stun foes and incapacitate them before they can attack. It also functions as a "source" power that can be detonated using other powers like Concussive Shot.

## Rank 4 Analysis

At Rank 4, Disruptor Ammo can increase damage to health and armor (4a), or you can gain the ability to automatically grant it to all squadmates when active (4b). The choice really breaks down to whether you want Ashley to tank and dish out as much damage as you can or whether she will hang back as part of the squad. If you're playing as a class that does not have an Ammo power (Cryo Ammo, Warp Ammo, or Incendiary Ammo), you can select Rank 4b and gain the use of Ashley's Disruptor Ammo when she's on a mission with you. Otherwise, select Rank 4a and increase her ability to inflict as much damage as possible and deplete enemy shields and barriers.

## Rank 5 Analysis

At Rank 5 you can select to either carry 30% more ammunition or to increase headshot damage by 25%. To make the best use of this selection, take into account what types of weapons Ashley will carry into battle most frequently. Ashley can carry a sniper rifle and can use the Marksman power to increase her sniping skills, so select Rank 4b to make her a more deadly sniper-class squadmate. You can also select it if you frequently task her with attacking from a distance with an assault rifle. If you prefer Ashley to serve as the team's tank, equip her with an assault rifle and select Rank 4a. She'll benefit from the increased ammunition count when engaging enemies in mid- to close-range combat.

## Rank 6 Analysis

Both options in Rank 6 increase Disruptor Ammo's damage output. However, Rank 6a increases damage to health, barriers, and shields, depending on the enemy. This makes all shots with Disruptor Ammo all the more powerful since it's a good general increase to overall damage. Rank 6b adds an entirely new effect to shots taken using Disruptor Ammo. Instead of simply dealing more damage to health, shields, and barriers, it stuns enemies and incapacitates them, allowing your team to take out vulnerable, stunned foes. Your Rank 6 option should depend on whether you want her to take down enemies one at a time, or if you want to use her as a crowd-controller, weakening, and stunning enemies for the rest of the squad to finish off.

## INFERNO GRENADE (UNIQUE)

Cluster-bomb a small area with incendiary munitions.

**Rank 1—Damage Per Second:** 75; Duration: 8 sec.; Radius: 5 meters

**Rank 2—Max Grenades:** Increase grenade capacity by 1

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Radius:** Increase impact radius by 30%

**Rank 5a—Max Grenades:** Increase grenade capacity by 2

**Rank 5b—Damage:** Increase damage by 40%

**Rank 6a—Armor Damage:** Increases damage to armor by 50%

**Rank 6b—Radius and Shrapnel:** Increase impact radius by 40%; increase shrapnel by 1 fragment

### Ranks 1 through 3 Analysis

Inferno Grenades are useful in nearly all combat situations. At Ranks 1 through 3, a well-aimed grenade can serve as a great medium- to long-range weapon. Hurl it ahead of you and inflict damage on unsuspecting foes. These grenades don't just explode like typical frag grenades; they explode into smaller clusters of explosions that also deal fire damage while covering a larger radius than typical grenades.

### Rank 4 Analysis

At Rank 4 you can choose to increase either the damage output or the damage radius. If you want to concentrate on dishing out maximum damage, choose Rank 4a. However, Rank 4b will increase the impact radius of your grenades and their cluster bombs, allowing you to damage more enemies.

### Rank 5 Analysis

Rank 5 allows you to either increase the amount of grenades you can carry or increase the damage dealt by 40 percent. For players who want to be offensive powerhouses, consider carrying more grenades. Rank 5a will ensure that you always have plenty of grenades for nearly all combat scenarios. Ashley is essentially a Soldier, so the more ammunition and explosives she has, the better. Rank 5b, however, can also help maximize damage to targets. The incendiary effect left by the grenade's cluster explosions can add a significant amount of damage to enemies, especially if you've chosen Rank 4b—increase in impact radius. At Rank 5b, your Inferno Grenades can potentially inflict up to 142.5 points of damage per second (if you've chosen Rank 4a).

### Rank 6 Analysis

At maximum rank, players can increase either armor-damaging abilities (Rank 6a) or radius and shrapnel effects (Rank 6b). Both options are worthwhile upgrades, so decide on whether you want to focus on dealing damage to armored enemies or inflicting less damage on armored enemies at the cost of damaging more enemies across a larger radius.

## MARKSMAN (UNIQUE)

Boost weapon accuracy and firing rate for a short time.

**Rank 1—Recharge Speed:** 20 sec.; Duration: 6 sec.; Rate of fire: 30%; Accuracy Bonus: 30%

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration:** Increase duration by 30%

**Rank 4a—Accuracy:** Increase accuracy bonus by 30%

**Rank 4b—Firing Rate:** Increase firing rate bonus by 25%

**Rank 5a—Duration:** Increase duration by 40%

**Rank 5b—Headshot:** Increase headshot damage by 25%

**Rank 6a—Accuracy and Firing Rate:** Increase accuracy and firing rate bonuses by 20%

**Rank 6b—Recharge:** Increase recharge speed by 40%

### Ranks 1 through 3 Analysis

The Marksman power is specifically designed to augment Ashley's weapon skills. Since Ashley is not as adept in power-based combat as someone like Liara, this skill is perfectly suited for her, as she'll be able to increase damage and accuracy with both types of rifles. Upgrade this to Rank 3, at least, if you plan on ever using her in a squad. The increased accuracy, when active, will help maximize her efficiency. At Rank 3, she'll have nearly eight seconds of improved accuracy and firing rate.

#### TIP

**Marksman is a better power for assault rifles than sniper rifles since it increases rate of fire, so it's better for fast-firing weapons. However, Rank 5b is a must if you ever plan on using a sniper-proficient Ashley on your team.**

### Rank 4 Analysis

Players who want Ashley to concentrate on sniping and long-range precision shooting should select Rank 4a. This will increase her accuracy by 30 percent and make sniping all the more effective. If you want Ashley to concentrate on assault rifle use, then select Rank 4b. The increased rate of fire will make most assault rifles more effective and will help compensate for assault rifles with a low rate of fire.

### Rank 5 Analysis

At Rank 5, you can choose to either make Ashley a better shooter for a longer period of time (Rank 5a) or increase her headshot damage by 25 percent (Rank 5b). The choice here is simple. If you plan on using Ashley more frequently in a sharpshooter role, sniping enemies from a distance and covering the squad's approach, then select Rank 5b. For general, all-purpose use, select Rank 5a and activate this power whenever necessary.

### Rank 6 Analysis

The final upgrade, Rank 6, will increase either Ashley's accuracy and firing rate (Rank 6a) or the recharge speed for the Marksman power (Rank 6b). If you chose Rank 4b, then select Rank 6a here. It'll boost accuracy to an impressive 80 percent. If you chose Rank 4a, Rank 6a will increase rate of fire to 70 percent. Helpful, but it may lead to problems with ammunition count. Select Rank 6b if you want to use Ashley's Marksman power frequently on the battlefield.

## ALLIANCE OFFICER (UNIQUE)

Boost weapon damage, health, and shields/barriers.

**Rank 1—Health and Shield Bonus:** 15%; Power Damage Bonus: 15%

**Rank 2—Damage and Durability:** Increase health, shield, and power damage bonuses by 15%

**Rank 3—Damage and Durability:** Increase health, shield, and power damage bonuses by 15%

**Rank 4a—Weapon Damage:** Increase weapon damage by 30%

**Rank 4b—Durability:** Increase health and shields by 30%

**Rank 5a—Power Damage:** Increase power damage by 20%

**Rank 5b—Sniper Rifles:** Increase sniper rifle damage by 45%

**Rank 6a—Squad Bonus:** Increase squadmate Tech and Biotic power damage by 10%

**Rank 6b—Assault Rifles:** Increase assault rifle damage by 60%

### Ranks 1 through 3 Analysis

At Ranks 1 through 3, Alliance Officer increases Ashley's damage and durability up to 45 percent across the board. These three upgrades alone make it possible for her to tank a little bit during missions. However, the increase in weapon damage also makes it possible for her to rely more on her rifles and less on power damage. If you want her to be on the front lines of battle, then upgrade at least to Rank 3 for this passive power.

### Rank 4 Analysis

Players who want Ashley to tank should select Rank 4b. This will increase her health and shield bonus to an impressive 75 percent. She will be able to take more damage and last a little bit longer in heated firefights, taking some of the heat off weaker squadmates. If you want to make her a weapon damage specialist, select Rank 4a. This increases her weapon damage to 45 percent bonus, making her even more deadly with high-powered rifles.

### Rank 5 Analysis

Both options in Rank 5 increase her ability to deal damage. Rank 5a augments Ashley's power damage by 20 percent, making powers like Concussive Shot and Inferno Grenade increasingly deadly. Similarly, Rank 5b augments Ashley's sniper rifle damage, making her an even better sharpshooter. If you're going to invest in her Marksman power, then be sure to select Rank 5b here to complement her sniper rifle skills.

### Rank 6 Analysis

Like Rank 5, this rank can also augment her weapon skills. Rank 6 is a squad bonus upgrade. Either increase your squad's weapon damage (6a) or increase the damage output from assault rifles (6b). If you want to focus on Ashley's weapon proficiencies and selected Rank 5b, then select Rank 6b as well. Between both weapon-specific upgrades, she'll never be at a loss as long as she has a rifle in her hands.

## BUILD OPTIONS

### WEAPON DAMAGE/TANK SPECIALIST

**Inferno Grenade:** 4a, 5b, 6a or 6b

**Disruptor Ammo:** 4a, 5a, 6a

**Concussive Shot:** 4a, 6a or 6b

**Marksman:** 4b, 5a, 6a

**Alliance Officer:** 4a, 5a or 5b, 6b

If you want Ashley to maximize her weapon-damage potential, invest heavily in as many of her powers as possible. Nearly every aspect of her power trees helps augment weapon damage ratings and rate of fire. To supplement her skills as a Soldier, she also has the use of Inferno Grenades. These small cluster grenades add another destructive element to Ashley's arsenal, allowing her to cover a larger area with less ammunition.

### TACTICAL SHARPSHOOTER

**Overload:** 4a, 5a or 5b

**Disruptor Ammo:** 5b, 6b

**Concussive Shot:** 5a, 6a

**Marksman:** 4a, 5b, 6a

**Alliance Officer:** 4a, 5b, 6b

Few crew members have the powers needed to excel in long-range sniping and precision sharpshooting. Ashley is one of them. Marksman, Disruptor Ammo, and Alliance Officer all have options to increase accuracy and especially sniper rifle skills. Select these to increase Ashley's efficiency with the sniper rifle. While on missions, place her at elevated points or at long-range from enemy positions—preferably behind good cover—and let her pick off foes from afar. This will let you and the rest of your squad advance as needed or execute other tactical maneuvers.

## ROMANCE

Ashley is a romance option for male Shepard. She can be romanced by a new Shepard as well as a Shepard who did not romance her in previous games. Because she is in the hospital for much of the early game, taking time to go to the Citadel and visit her is the key to building up intimacy.

### KEY CONVERSATIONS

On Mars, Ashley remains distrustful of Shepard and his relationship with Cerberus. While it's tempting to get angry with her, choosing the gentler options allows Shepard to defend himself without alienating Ashley.

Later, Shepard has multiple chances to visit her in the hospital: immediately after arriving at the Citadel for the first time (she is unconscious but will learn that Shepard came to see her), after completing the mission at Palaven (Ashley is in bed and injured), and once more before finishing the Genophage missions (after she is up on her feet, preparing to be discharged). These conversations give Shepard the chance to build up intimacy and to build up a level of trust to ensure that she won't force Shepard to kill her in the confrontation on the Citadel.

### TIP

**Shepard can also bring Ashley a present in the hospital; purchase the works of Tennyson to increase intimacy. If Shepard had a relationship with Ashley in *Mass Effect 1*, but subsequently pursued another relationship in *Mass Effect 2*, Ashley is angry and hurt during her talks at the hospital. Apologize and make it clear that you want to be with her. This is key to continuing a relationship and getting back her trust.**

### KEY MOMENT

Ashley offers to meet Shepard on the Citadel at the café on the Presidium Commons. If Shepard has a very high intimacy, she brings up the possibility of a serious relationship. If Shepard has been less personal with her, Ashley doesn't bring it up, but Shepard can suggest it.

## EDI

The Enhanced Defense Intelligence, or EDI, serves as an information source and cyberwarfare defense system on the rebuilt Normandy SR-2. The ship's crew can access EDI at any terminal or through radio contact.

During an attack from a Collector vessel, pilot Jeff "Joker" Moreau gave EDI full access to the Normandy's systems, allowing the ship to escape. Although EDI retains the control that Moreau gave her, she is usually content to advise the organic crew members who fly and maintain the ship.

### PREVIOUSLY IN MASS EFFECT

EDI is a returning character from *Mass Effect 2*. In *Mass Effect 3*, the Normandy's Enhanced Defense Intelligence has remote control over a Cerberus-designed infiltration unit. The body was once fully covered with skin to allow it to pass as human, but now it has been stripped down to a smooth, skeletal frame. Freed of excess weight, EDI can move the body with a dancer's grace, and its tough chassis makes it suitable for combat.

Uniform 2

## TACTICAL ROLE

EDI is a tactical specialist. With her affinity for tech power damage and skills like Decoy, EDI can both distract and disable enemies. She's also effective as a damage dealer. In fact, her passive power helps increase her damage output to tech and power-based attacks.

EDI's most valuable skill, however, is Decoy. Powers like Overload and Incinerate are great to use against enemies, but Decoy, a power that is unique to her, essentially creates another soldier on the squad. At lower levels, Decoy can simply distract, but after being upgraded to Rank 5a and 6a, it can also inflict damage on enemies, functioning similarly to an Engineer's drone.

She's capable of carrying SMGs and pistols, so she won't excel in heavy weapon fire. Her focus is on powers and power damage. While EDI may not be built for tanking, her skill set makes her a wonderful comrade to have along for missions that will require heavy tactical maneuvers.

## POWERS

## INCINERATE

Burn your opponents and incinerate their armor. Heavy damage to health and armor. Make an enemy panic, stopping health regeneration.

**Rank 1—Recharge Speed:** 16 sec.; Damage: 300

**Rank 2—Recharge Speed:** Increase recharge speed by 25%.

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Burning Damage:** Increase damage by an additional 40% over 8 seconds

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Freeze Combo:** Increase damage to frozen and chilled targets by an additional 100%

**Rank 6b—Armor Damage:** Increase damage to armored targets by 50%

## Ranks 1 to 3 Analysis

Incinerate is one of EDI's most destructive powers. Because it can function as both a source and a detonator power, it is always a good idea to upgrade this to at least Rank 3. That way, EDI can create explosive combinations with other team members. Of course, you can also use it as a destructive, stand-alone power. If that's your goal, don't stop upgrading at Rank 3.

## Rank 4 Analysis

To increase the damage output of Incinerate up to 450 points of damage, select Rank 4a. The 30 percent increase is substantial enough to take down lesser enemies while inflicting large amounts of damage on tougher foes. Your other option is to increase the impact radius of Incinerate in order to scorch more enemies with every blast. Your choice here should depend on whether you want EDI to be a main damage-dealer or to complement the rest of the squad by softening multiple enemies at once.

## Rank 5 Analysis

Players hoping to maximize Incinerate's damage potential should invest in Rank 5a, Burning Damage. This upgrade increases the damage over time and burns enemies past the initial impact of the shot. When coupled with Incendiary Ammo or other detonator powers, this combination can lead to dazzling explosive results. Your other option at Rank 5 is to increase the recharge speed of Incinerate. This will allow EDI to use Incinerate more often in battle and make her a deadly weapon, especially in squads with Biotic specialists.

## Rank 6 Analysis

An ironic power upgrade, Rank 6a increases damage to frozen and chilled targets by an additional 100 percent. So if you frequently use squadmates with Cryo Ammo or Cryo Blast, select this rank upgrade to complement their powers. If you don't frequently use those freezing skills, then don't waste precious upgrade points on Rank 6a. Instead, use those points on Rank 6b and gain a very useful damage increase to armored targets.

## OVERLOAD

Overload electronics with this power surge, stunning your enemy. It is effective against shields, barriers, and synthetics but not as effective against organics.

**Rank 1—Recharge Speed:** 16 sec.; Damage: 220

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Chain Overload:** Hit one additional target within 8 meters with 60% less damage

**Rank 4b—Damage:** Increase damage by 30%

**Rank 5a—Neural Shock:** Incapacitate weaker organic enemies for a short duration

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Chain Overload:** Increase damage by 15%. Hit one additional target within 8 meters with 60% less damage

**Rank 6b—Shield Damage:** Increase damage to barriers and shields by an additional 100%

## Ranks 1 to 3 Analysis

By far one of the most useful powers against synthetics, Overload can temporarily fry electrical equipment like turrets and can singe synthetic foes. At Ranks 1 through 3, you gain a standard recharge speed and damage increase, so you could stop upgrading at Rank 3 if you don't plan on making Overload an integral part of EDI attack arsenal. However, during missions where you encounter geth or other synthetic opponents, EDI can still prove to be very useful.

## TIP

**Remember, most tough enemies are shielded, preventing many Biotic powers from affecting them. Pairing EDI with a Biotic squad member means she can Overload the enemies, rendering them vulnerable to the Biotic's incapacitating powers in a fast one-two punch.**

## Rank 4 Analysis

If you do make Overload a more integral part of EDI's attack arsenal, then consider upgrading Rank 4a. This will increase the amount of targets she can affect by one. So instead of overloading only one enemy at a time, she can stun multiple enemies with each Overload blast. Rank 4b is a standard damage increase. Select this if you

want her to focus more dealing damage to individual enemies.

## Rank 5 Analysis

At Rank 5, you gain the option to stun organic foes as well as synthetics. The Neural Shock ability will expand EDI's role across a number of missions since her Overload power will no longer be effective against synthetic targets alone. Rank 5b increases Overload's recharge speed, allowing her to use the skill more frequently in battle. The trade-off between Ranks 5a and 5b are simple; if you want to use EDI against more varied types of enemies, select 5a. If you want to use her more frequently in battle to stun enemies en masse, select Rank 5b.

## Rank 6 Analysis

Like Rank 4a, Rank 6a will increase how many targets EDI can reach with an Overload blast by one and will increase the damage it inflicts by 15%. The choice is simple; if you selected Rank 4a, make the same selection here and she will be able to stun small groups of enemies with one Overload blast. Not only will she incapacitate more enemies at once, but you'll expend less power to do it. At Rank 6b, you can increase the damage dealt to barriers and shields, making EDI extremely effective against all shielded foes.

## DEFENSE MATRIX (UNIQUE)

Reinforce armor with protective Foucault currents. Purge the currents to restore shields. Slow power use.

**Rank 1—Recharge Speed:** 20 sec.; Damage Reduction: 15%; Shields Restored: 50%

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Shield Bonus:** Increase shield restoration by 20% when purging armor

**Rank 4a—Durability:** Increase damage protection by 5%

**Rank 4b—Shield Bonus:** Increase shield restoration by 30% when purging armor

**Rank 5a—Shield Recharge:** Increase shield recharge rate by 15%

**Rank 5b—Power Synergy:** Increase tech power damage by 25% while Defense Matrix is active

**Rank 6a—Power Recharge:** Reduce power speed penalty by 30%

**Rank 6b—Durability:** Increase damage protection by 10%

### Ranks 1 to 3 Analysis

Just as its name implies, this power grants EDI an increase in defensive capabilities. When active, Defense Matrix increases the recharge speed, damage reduction, and shield restoration for EDI's armor. At Rank 3, the recharge speed drops to 16 seconds while shield restoration increases to 70 percent. This power is especially useful because it can increase the amount of damage EDI can sustain during battle and allow her to use other powers as well.

### Rank 4 Analysis

At Rank 4, you can choose to either increase your Shield Bonus to 100 percent (4b) or increase the durability of her shields to reduce damage (4a). While both sound like they do the same thing, Rank 4a is used to lower the amount of damage EDI incurs across the board. Rank 4b allows EDI to restore her shields to 100 percent as soon as her armor is purged, making her nearly indestructible on the battlefield...as long as she can get behind cover.

### Rank 5 Analysis

By selecting Rank 5a, you can increase the recharge rate of EDI's shields. The extra 15 percent may not sound like much, but in a heated firefight, few things are more important than the ability to regenerate your shields before the opponent. Rank 5b, the Power Synergy upgrade, increases the damage of EDI's other tech powers, like Overload, by 25 percent when Defense Matrix is active. Select this upgrade option if you want EDI to become a fierce tech power specialist.

### Rank 6 Analysis

The final upgrade for EDI's Defense Matrix gives you the choice to either increase how quickly your powers recharge (6a) or lower the amount of damage you can take (6b). If you chose Rank 4a, then select Rank 6b here to maximize EDI's toughness. Otherwise, you can never go wrong by selecting Rank 6a. If EDI is going to use a lot of powers and lend a hand with power combinations, then select Rank 6a.

## DECOY

Distract opponents with this decoy.

**Rank 1—Recharge Speed:** 16 sec.; Duration: 15; Decoy Shields: 1,000

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration:** Increase duration by 30%

**Rank 4a—Duration:** Increase duration by 40%

**Rank 4b—Durability:** Increase shields by 40%

**Rank 5a—Shock:** Shock enemies within a 2.5-meter radius of the decoy

**Rank 5b—Recharge Speed:** Increase recharge speed by 35%

**Rank 6a—Exploding Decoy:** Decoy explodes on destruction, causing 300 damage across 4 meters

**Rank 6b—Shields and Duration:** Increase shields and duration by 50%

### Ranks 1 to 3 Analysis

Decoy is EDI's valuable unique power. When upgraded to Rank 3, you gain another member on the battlefield. The decoy won't be able to fight back or stun enemies, but with nearly 20 seconds of life and 1,000 points of shields, EDI's decoy can do exactly what you need it to: draw away enemy fire and flush enemies out of cover. Even if you don't plan on using EDI often, invest the six points required for these first three ranks. You'll be glad you did.

### Rank 4 Analysis

At Rank 4, you have a very tough decision to make. You can either grant the decoy an extra six seconds of life or 400 points of shield protection. Both can result in a very effective decoy, but your ultimate decision should be based on what role you want EDI and her decoy to take in missions. If you frequently use a squad whose members have low health and shields and no tank, then select Rank 4b. The higher shield rating will allow the decoy to take more damage up front and last long enough to occasionally take the brunt of attacks. If you want a simple decoy that can distract multiple enemies for a prolonged amount of time, select Rank 4a.

### Rank 5 Analysis

At Rank 5a, you can add the decoy's first offensive ability—Shock. While deployed, the decoy will not only absorb damage and distract enemies, but also shock enemies within a 2.5-meter radius. This may not inflict a lot of damage, but if the enemies nearby are stunned, then they can't attack the decoy or your squad; therefore, the decoy will last a bit longer, and your squad can get the jump on stunned foes. Rank 5b decreases the recharge speed for the Decoy ability to 10 seconds. That means that you can deploy it every 10 seconds and confuse enemies at nearly every turn.

### Rank 6 Analysis

At Decoy's final Rank upgrade, you must choose whether to add a second offensive ability (6a), an explosion, or increase its shields and duration on the battlefield (6b). Offensive-minded commanders should select Rank 6a. After all, the explosion can inflict 300 points of damage on all nearby foes within four meters! Commanders who rely a bit more on special tactical maneuvers like flanking and leapfrogging will appreciate having the decoy last a bit longer during battle. After all, if you chose Rank 4a, then Rank 6b will increase duration to 33 seconds. If you selected Rank 4b, then Rank 6b will increase the decoy's shields to 1,900 points.

UNSHACKLED AI

Boost power damage, shields and barriers, and health.

- 

**Rank 6a—Squad Bonus:** Increase squadmate tech power damage and duration by 10%
- 

**Rank 6b—Shield Recharge:** Decrease shield recharge delay by 20%

Ranks 1 to 3 Analysis

Unshackled AI is great tech passive power capable of making EDI tougher defensively and offensively. At Ranks 1 through 3, EDI will have a health and shield increase of 30 percent and a power damage bonus of 60 percent, making her tougher to damage and more dangerous when using powers.

Rank 4 Analysis

Increase EDI's power damage even more by selecting Rank 4a. This will bump her power damage bonus to 80 percent and make powers like Incinerate or Overload all the more effective. If you prefer a more defensive approach, select Rank 4b instead. Doing so will increase her health and shield bonus to 50 percent. The choice should hinge on whether you plan on using EDI as a tactical specialist or a tech power maven.

Rank 5 Analysis

Both Rank 5 upgrades increase EDI's damage potential. Rank 5a will augment your weapon damage by 20 percent. Rank 5b will increase all tech damage by 30 percent. This should be a simple decision. If you use EDI primarily for her tech powers, then select Rank 5b. Otherwise, a 20 percent increase to weapon damage can be helpful in any mission.

Rank 6 Analysis

The final two upgrade options can either grant the squad a tech power damage and duration bonus (6a) or decrease EDI's shield recharge delay (6b). Rank 6a, the squad bonus, is great for players who employ tech-heavy teams. Choose this upgrade option to bolster squads that frequently feature EDI, Tali, and Engineer Shepards. Otherwise, select Rank 6b. After all, EDI can always benefit from increased shield recharging.

BUILD OPTIONS

TECH POWER SPECIALIST

- Incinerate:** 4a, 5a, 6b  
**Overload:** 4b, 6b  
**Defense Matrix:** 5b, 6a  
**Unshackled AI:** 4a, 5b, 6a

Given her synthetic nature, it's no surprise that EDI might have a predisposition toward tech powers like Overload and Defense Matrix. Better yet, her passive skill, Unshackled AI, can be upgraded toward augmenting tech powers as a whole. The final Rank upgrade even has an option to increase your squad's tech power damage and duration. Use source powers like Overload or Incinerate to set up deadly explosions, while Defense Matrix supplements EDI's shields and augments tech power damage.

TACTICAL SPECIALIST

- Incinerate:** 4a, 5a, 6b  
**Overload:** 4a, 5a, 6a  
**Defense Matrix:** 4a, 6b  
**Decoy:** 4a, 5a, 6a or 6b  
**Unshackled AI:** 4b, 6a

EDI can also use her unique Decoy power to facilitate a multitude of useful tactics on the battlefield. When deployed, EDI's Decoy can do anything from distract foes to stun them. While the decoy is active, the entire squad can benefit from its presence. However, Decoy isn't the only useful tactical power. Rely heavily on EDI's Overload power to stun multiple foes, and free other squad members to execute useful tactical maneuvers. When upgraded properly, EDI can become a one-person flank or bait for flushing out enemies.

ROMANCE

EDI is not a romantic option for Commander Shepard. She can, however, engage Joker in a relationship with Shepard's helpful counsel.

# GARRUS VAKARIAN

Garrus Vakarian is a noted turian sharpshooter and combat engineer. He was born on Palaven and became a Citadel security officer like his father but left the force when superiors shut down his investigation into the rogue Spectre Saren Arterius. Vakarian eventually discovered that Saren had been indoctrinated by the Reaper known as Sovereign.

In time, Vakarian found his way to the criminal haven of Omega and assumed the name Archangel. There, he and a small group of operatives worked to disrupt the settlement's powerful mercenary groups until Shepard recruited him. The turian narrowly survived the second Normandy attack on the Collectors. More recently, Vakarian has become the head of a turian task force focused on preparing for the Reaper invasion.

## PREVIOUSLY IN MASS EFFECT

A returning character from *Mass Effect 1* and *Mass Effect 2*, Garrus is one of Shepard's most trusted comrades. After the events of the first *Mass Effect*, Garrus and Shepard went their separate ways. After reuniting in *Mass Effect 2* and defeating the Collectors together, the pair once again parted company. Now, Garrus returns to help Shepard in the fight. Garrus is a potential romance if female Shepard romanced Garrus in *Mass Effect 2*.

If you import a save from a game where Garrus is not present, then Garrus will not appear during *Mass Effect 3*. There is no replacement character to join Shepard's squad; Shepard will simply have fewer options from which to choose.

Uniform 1

Uniform 2

## TACTICAL ROLE

Since Concussive Shot can serve as a detonator power, consider upgrading it to deal maximum damage. Similarly, Overload can serve as both a source and detonator power, so upgrading it can benefit nearly any squad Garrus is in. Despite these power benefits, Garrus's true strength is in weapon damage.

After all, Garrus is a weapon damage specialist. His ability to wield either type of rifle makes him a great mid- to long-range soldier, but skills like Proximity Mine, Concussive Shot, and Overload are also great at disrupting enemy movements. If you favor direct combat, steer Garrus toward weapon-damage upgrades.

Given his affinity to sniper rifles, however, Garrus can also make a great tactical sharpshooter. Order Garrus to elevated positions, or have him hang back when approaching long, wide-open areas. From the safety of cover, Garrus will be able to covertly snipe enemies from afar, lightening the load for the rest of your squad.

## POWERS

## CONCUSSIVE SHOT

Flatten your enemy with a precise blast at short or long range. Effective against barriers.

**Rank 1—Recharge Speed:** 10 sec.; Damage: 100; Force: 300 Newtons

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Force and Damage:** Increase force and damage by 20%

**Rank 4a—Force and Damage:** Increase force and damage by 30%

**Rank 4b—Radius:** Increase impact radius by 1.5 meters

**Rank 5a—Shatter:** Increase force and damage to frozen targets by 100%

**Rank 5b—Recharge Speed:** Increase recharge speed by 35%

**Rank 6a—Amplification:** Power Concussive Shot with the properties of the active ammo power, enabling it to burn, freeze, disrupt, warp, or pierce armor

**Rank 6b—Shredder:** Increase damage to organics by 100% over 10 seconds; increase force by 50%

## Ranks 1 through 3 Analysis

Concussive Shot is a lot more than just another burst from your weapon of choice. With a single blast of Concussive Shot, you can disrupt an enemy's progress, knock them down, or deplete their protective barrier. At Rank 3, Concussive Shot can dish out 100 points of damage and 300 Newtons of force. When paired with a source power like Incinerate, Concussive Shot is the perfect detonator.

## Rank 4 Analysis

Like most other powers with explosive or concussive abilities, the first upgrade choice given is to increase either the power's effects, in this case force and damage (Rank 4a), or increase its radius (Rank 4b). Select your upgrade based on Garrus's eventual build. If you want to shape Garrus into a formidable weapon damage dealer, select Rank 4a. This will inflict more damage per Concussive Shot. By selecting Rank 4b, Garrus can knock more enemies down per shot but inflict less damage. This option is helpful in squads that favor disrupting enemies before killing them.

## Rank 5 Analysis

If you plan on grouping Garrus with Cryo-friendly squadmates, select Rank 5a. Shatter will affect only those foes that have been frozen or chilled using Cryo Blast or Cryo Ammo. If you don't favor Cryo users, then select Rank 5b. The increased recharge speed for Concussive Shot will ensure you're able to knock down enemies all over the battlefield with less time spent waiting for your power to ready.

## Rank 6 Analysis

Like Rank 5a, Rank 6a takes other powers into account in order to function. At Rank 6a, Amplification will power Concussive Shot with ammo powers like Cryo or Warp Ammo. Since Garrus also has Armor-Piercing Ammo, Rank 6a will automatically imbue Concussive Shot with armor-piercing abilities when Armor-Piercing Ammo is active. However, when paired with squadmates like James who are capable of giving squadmates Incendiary Ammo, this upgrade will also imbue those ammo effects on each Concussive Shot. If you vary your squad composition often, then you may not be paired with squadmates like James often enough to benefit from Rank 6a. In that case, select Rank 6b, Shredder. This upgrade adds a damage-over-time effect to every shot and increases the force of each Concussive Shot, allowing you to knock down tougher enemies.

## OVERLOAD

Overload electronics with this power surge, stunning your enemy. Effective against shields, barriers, and synthetics. Not as effective against organics.

**Rank 1—Recharge Speed:** 16 sec.; Damage: 220

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Chain Overload:** Hit 1 additional target within 8 meters with 60% less damage

**Rank 4b—Damage:** Increase damage by 30%

**Rank 5a—Neural Shock:** Incapacitate weaker organic enemies for a short duration

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Chain Overload:** Increase damage by 15%. Hit 1 additional target within 8 meters with 60% less damage

**Rank 6b—Shield Damage:** Increase damage to barriers and shields by an additional 100%

## Ranks 1 through 3 Analysis

By far one of the most useful powers against synthetics, Overload can temporarily fry electrical equipment like turrets and can singe synthetic foes. At Ranks 1 through 3, you gain a standard recharge speed and damage increase, so you could stop upgrading at Rank 3 if you don't plan on making Overload an integral part of your attack arsenal. However, during missions where you encounter geth or other synthetic opponents, Overload can still prove to be very useful.

## Rank 4 Analysis

If you do make Overload a more integral part of Garrus's arsenal, then consider upgrading Rank 4a. This will increase the amount of targets he can affect by one blast of Overload. So instead of overloading only one enemy at a time, Garrus can stun multiple enemies with each Overload blast. Rank 4b is a standard damage increase. Select this if you want to focus more dealing damage to individual enemies.

## Rank 5 Analysis

At Rank 5 you gain the option to stun organic foes as well as synthetics. The Neural Shock ability will expand Garrus's role across a number of missions since his Overload power will no longer be effective against synthetic targets alone. Rank 5b increases Overload's recharge speed, allowing Garrus to use the skill more frequently in battle. The trade-off between Ranks 5a and 5b are simple; if you want to use Overload against more varied types of enemies, select 5a. If you want to use it more frequently in battle to stun enemies en masse, select Rank 5b.

## Rank 6 Analysis

Like Rank 4a, Rank 6a will increase how many targets you can reach with an Overload blast by one target and increase the damage it inflicts by 15 percent. The choice is simple; if you selected Rank 4a, make the same selection here and he will be able to stun small groups of enemies with one Overload blast. Not only will he incapacitate more enemies at once, but you'll expend less power to do it. At Rank 6b, you can increase the damage dealt to barriers and shields, making Garrus extremely effective against all shielded foes.

## ARMOR-PIERCING AMMO (UNIQUE)

Bring down heavy-armor units. Shoot through light cover to hit enemies. More weapon damage. More damage to armor.

**Rank 1—Health Damage Bonus:** +10%; Armor Damage Bonus: +10%; Armor Effectiveness: -50%; Penetration: 0.5 meters

**Rank 2—Pierce:** Increase ammo's cover penetration by 40%

**Rank 3—Damage:** Increase health and armor damage bonuses by 4%

**Rank 4a—Damage:** Increase health and armor damage by 6%

**Rank 4b—Squad Bonus:** Squadmates gain your ammo power at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 25%

**Rank 6a—Damage:** Increase health and armor damage by 10%

**Rank 6b—Pierce:** Increase ammo's cover-penetration by 50%. Decrease the effectiveness of armored targets by 25%

### Ranks 1 through 3 Analysis

Armor-Piercing Ammo is a must for soldiers like Garrus who excel in dealing weapon damage. With skills like Overload in his arsenal, he can affect synthetic targets more efficiently. With Armor-Piercing Ammo equipped, he can also more efficiently affect armored organic targets like Cerberus troopers as well. Keep this active at all times since, like all other Ammo powers, you don't incur any power penalties when you activate it.

### Rank 4 Analysis

At Rank 4, Armor-Piercing Ammo can either increase damage to health and armor (4a), or you can gain the ability to automatically grant it to all squadmates when active (4b). The choice really breaks down to whether you want to inflict as much damage as you can or whether Garrus will hang back as part of the squad. If you're playing Shepard as a class that does not have an Ammo power (Cryo Ammo, Warp Ammo, or Incendiary Ammo), you can select Rank 4b and gain the use of Garrus's Armor-Piercing Ammo when he's on a mission with you. Otherwise, select Rank 4a and increase his ability to inflict as much damage as possible. Rank 4a is also best suited for players who want Garrus to focus more on sniping and sharpshooting.

### Rank 5 Analysis

Since Garrus can carry only an assault or sniper rifle, then make your selection for the Rank 5 upgrade based on what will be his primary weapon. Rank 5a increases his ammo count, which is great for weapons that expend a lot of ammunition, like assault rifles. Rank 5b increases the amount of damage Garrus inflicts with a headshot. While, technically, Rank 5a can benefit Garrus builds that favor sniper rifles (due to the low ammunition count of most sniper rifles) and Rank 5b can also benefit Garrus builds that favor assault rifles (since headshots are great no matter what weapon you employ), both Rank 5 options are a win-win situation.

### Rank 6 Analysis

Garrus's Rank 6 choices are both geared to increase his damage output. If you chose the damage upgrade for Rank 4, then select Rank 6a. It will also increase health and armor damage across the board by 10 percent. Rank 6b increases your ammunition's ability to pierce armor even more effectively. It will also increase how far your armor can penetrate cover, allowing Garrus to shoot through a meter of cover.

## PROXIMITY MINE (UNIQUE)

Fire this sticky mine into traffic. It will detonate when an enemy steps within range.

**Rank 1—Recharge Speed:** 24 sec.; Damage: 400; Radius: 3 meters

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Radius:** Increase impact radius by 40%

**Rank 5a—Damage Taken:** Increase damage dealt to targets from all sources by 25% for 8 seconds

**Rank 5b—Slow:** Slow target's movement speed by 30% for 8 seconds

**Rank 6a—Damage:** Increase damage by 50%

**Rank 6b—Recharge Speed:** Increase recharge speed by 40%

### Ranks 1 through 3 Analysis

Few other skills are as well suited to Garrus's high weapon damage output than Proximity Mine. The mine is an explosive projectile. Rather than explode on contact, however, the Proximity Mine will sit unbothered until a rival comes within striking distance and then explode. This power is useful in creating bottlenecks and traps and setting down explosive perimeters around your squad. At Rank 3, Garrus's proximity mines can inflict 480 points of damage within a three-meter radius, which can give you or your squad a decent three-meter cushion before enemies get within striking distance.

### Rank 4 Analysis

Like most grenade powers, Rank 4 grants you the choice to either increase damage (Rank 4a) or increase the damage radius (Rank 4b). The choice should be made depending on whether you want to use his proximity mines primarily as damage-dealers or as tactical booby traps for enemies. The wider the radius, the more enemies that can be affected by their explosion. Keep this in mind when entering narrow areas like catwalks or tight hallways.

### Rank 5 Analysis

Rank 5 gives you the choice to either add an extra damage-over-time effect (increasing damage from all sources for eight seconds on the target it hits) or to slow a target's movement. Once again, the choice here is the same as Rank 4. If you want to inflict the most damage possible, select Rank 5a. Enemies hit by a Proximity Mine's explosion will take more damage from powers and weapons after the explosion. If you want to use the Proximity Mines as crowd-controlling booby traps, select Rank 5b. The extra-slow effects will allow your team to execute tactical maneuvers or overwhelm them with attacks.

### Rank 6 Analysis

The final rank upgrade will either increase the damage to a potential maximum of 800 per explosion (Rank 6a) or increase the recharge speed (Rank 6b), allowing you to use mines more often. The more proximity mines you can leave on the battlefield, the more intricate a booby trap you can set.

## TURIAN REBEL (UNIQUE)

Boost weapon damage, health, and powers.

**Rank 1—Health and Shield Bonus:** 10%; Weapon Damage Bonus: 20%

**Rank 2—Damage and Durability:** Increase health and shield bonuses by 10%; increase weapon damage bonuses by 20%

**Rank 3—Damage and Durability:** Increase health and shield bonuses by 10%; increase weapon damage bonuses by 20%

**Rank 4a—Weapon Damage:** Increase weapon damage by 40%

**Rank 4b—Durability:** Increase health and shields bonuses by 20%

**Rank 5a—Power Damage:** Increase power damage by 20%

**Rank 5b—Assault Rifles:** Increase assault rifle damage by 50%

**Rank 6a—Squad Bonus:** Increase power damage of squadmates by 10%

**Rank 6b—Sniper Rifles:** Increase sniper rifle damage by 60%

### Ranks 1 through 3 Analysis

If you're going to use Garrus as a heavy-weapon damage dealer, then his passive power, Turian Rebel, is an absolute necessity. At Rank 3, he'll gain a generous 60 percent weapon damage bonus, making all of his rifle attacks even more effective. Where a sniper shot to the torso would severely wound a Cerberus trooper, at Rank 3 of Turian Rebel, that same shot may kill off the trooper completely. Even if you don't favor spending upgrade points on passive powers, invest the six points in Turian Rebel's first three ranks. It's more than worth it.

### Rank 4 Analysis

Players who want to increase Garrus's weapon damage even more should invest four more points in Rank 4a, Weapon Damage. This will increase weapon damage bonus to 100 percent, making all of Garrus's weapon attacks doubly efficient. To make Garrus a tougher combatant, invest those points in Rank 4b, Durability. This will increase health and shield bonuses to 50 percent.

### Rank 5 Analysis

At Rank 5, you must choose whether Garrus will favor assault rifles or other destructive powers like Proximity Mine. He's a skilled sharpshooter and efficient weapon specialist with either weapons or power-heavy combat, so there is no real downside to making him favor one over the other. However, do take into account the role you'd like him to play across the majority of your missions. If you want Garrus to be a weapon-damage specialist, then select Rank 5b. You'll gain a boost to assault rifle use. If you select Rank 5a, then Garrus's Proximity Mines, Concussive Shot, and Overload will gain a substantial boost in damage output.

### Rank 6 Analysis

Like Rank 5, Rank 6 will also give you the option to increase weapon damage, in this case sniper rifle damage. If you've selected Rank 5b, then select Rank 6b as well. This will result in higher weapon damage regardless of which rifle Garrus carries. The alternative is to grant the squad a power damage increase of 10 percent (Rank 6a). Since this does not directly affect Garrus, select this upgrade only if your squad is built to complement each other through power sharing. For example, if you have squadmates who can grant other teammates the ability to use their specific ammo power (like Kaidan's Incendiary Ammo).

## BUILD OPTIONS

### WEAPON DAMAGE SPECIALIST

**Concussive Shot:** 4a, 5a, 6b  
**Overload:** 4b  
**Armor-Piercing Ammo:** 4a, 5a, 6a  
**Proximity Mines:** 4a, 5a, 6a  
**Turian Rebel:** 4a, 5b, 6a

Garrus can be a deadly weapons specialist. When upgraded properly, everything from his rifle proficiency to his Proximity Mine power can dish out an impressive amount of damage. Two of his powers, Concussive Shot and Overload, can deal damage, but they're better used for disrupting enemies than destroying them. So also consider upgrading both types of rifles (sniper and assault) to increase Garrus's weapon damage. Once upgraded, other powers like Armor-Piercing Ammo and Turian Rebel can help increase weapon damage and ammo efficiency. Proximity Mines are also a valuable part of Garrus's arsenal. Use them to blow up small groups and otherwise obliterate large rivals.

### TACTICAL SHARPSHOOTER

**Concussive Shot:** 4a, 5a, 6b  
**Overload:** 4a, 5a or 5b  
**Armor-Piercing Ammo:** 4a, 5b, 6b  
**Proximity Mines:** 4b, 5b, 6b  
**Turian Rebel:** 4a, 5a, 6a

A tactical sharpshooter is not much different than a weapon damage specialist. The only difference is that a tactical sharpshooter favors a sniper rifle as his primary weapon and doesn't frequently engage in close-range combat. A tactical sharpshooter favors enemy disruption, traps, tactical maneuvers, and long-range sniping rather than direct combat. Use Garrus to hang back and cover your tactical approach. He can snipe enemies from afar, hold a flanking enemy at bay, or even set up Proximity Mines as complex booby traps. With heavy use of Overload and Concussive Shot, Garrus can also concentrate on disrupting enemies before picking them off with his sniper rifle.

## ROMANCE

If female Shepard romanced Garrus in *Mass Effect 2*, she has the option to continue the relationship.

### KEY CONVERSATIONS

After joining the squad, Garrus will speak with Shepard at his post at the Normandy's main gun battery. After exchanging pleasantries, he will bring up his relationship with Shepard. Shepard can either end it in a friendly fashion or indicate that she'd like to keep it going. This doesn't commit Shepard to the relationship; it just allows the relationship to keep going.

Shepard can also talk with Garrus after finishing the Genophage missions on Tuchanka. Garrus is in the cockpit, trading barbs with Joker, and Shepard can share a moment of camaraderie and reflect on how she chose to resolve the final Genophage mission.

### KEY MOMENT

Once Shepard has spoken with Garrus enough times, Garrus will offer to meet Shepard on the Citadel. Shepard and Garrus climb to one of the highest parts of the Presidium, and Garrus will declare his love and ask Shepard to make a commitment.

#### Spoiler!

While not restricted to the romance, Shepard can have interesting late-game conversations with Garrus about the responsibilities and pressures of being in command during a war. If Shepard chose to sabotage the Genophage cure, Garrus is the one person Shepard can come clean with.

# JAMES VEGA

Young, brash, and dangerous, James is one of the best soldiers in the Alliance, but he's also on a fast track to burning out. He works hard, plays hard, and drinks hard. Some see him as reckless, and his superiors see him as fearless, but those who know him best know there's a self-destructive side to his heroics.

## PREVIOUSLY IN MASS EFFECT

This is James Vega's first appearance in the *Mass Effect* franchise.

Uniform 1

Uniform 2

## TACTICAL ROLE

James Vega's size and bulk do not lie. At first glance, it is easy to see that he's built for taking and dishing out damage. Nearly all of James's powers are geared for damage output, except two of his unique powers—Fortification and Arms Master (his passive power); these are best suited for tanking.

When properly upgraded, Fortification and Arms Master allow James to take more damage, making him a perfect spearhead for tactical maneuvers. Send him in first when advancing on enemy troops or send him off alone to flank the enemy's vulnerable side.

If you want to concentrate on damage output but not utilize James as a tank, pour the majority of his upgrade points into damage-dealing powers like Carnage, Frag Grenade, and Incendiary Ammo. The combination of Incendiary Ammo and Frag Grenades (when upgraded to Rank 5b) can increase the amount of damage inflicted on enemies with the least amount of ammunition expended. Frag Grenade's added bleed effect and Incendiary Ammo's ability to also inflict damage over time can stack up, causing vulnerable organic targets to suffer increased damage beyond the initial impact.

## POWERS

## FRAG GRENADE

Lob this grenade at your enemy, and the shrapnel will take care of the rest. Effective against armor.

**Rank 1—Damage:** 450;  
Impact Radius: 5 meters

**Rank 2—Max Grenades:**  
Increase grenade capacity by 1

**Rank 3—Damage:** Increase  
damage by 20%

**Rank 4a—Damage:** Increase  
damage by 30%

**Rank 4b—Radius:** Increase  
impact radius by 30%

**Rank 5a—Max Grenades:**  
Increase grenade capacity by 2

**Rank 5b—Bleed Damage:**  
Increase damage to organics  
by 40% over 10 seconds

**Rank 6a—Armor-piercing:**  
Increases damage to armor  
by 50%

**Rank 6b—Shield  
Overload:** Increase damage  
to shields by 50%

## Ranks 1 through 3 Analysis

Frag Grenades are useful in nearly all combat situations. At Ranks 1 through 3, a well-aimed grenade can serve as a great medium- to long-range weapon. Hurl it ahead of you and inflict damage on unsuspecting foes.

## Rank 4 Analysis

At Rank 4 you can choose to either increase the damage output or its damage radius. If you want to concentrate on dishing out maximum damage, choose Rank 4a. However, Rank 4b will increase the impact radius of your grenade, allowing you to damage more enemies.

## Rank 5 Analysis

Rank 5 allows you to either increase the amount of grenades you can carry or add a bleed effect to all organic targets. For players who want to be offensive powerhouses, consider carrying more grenades. Rank option 5a will ensure that you always have plenty of grenades for nearly all combat scenarios. James is essentially a Soldier, so the more ammunition and explosives he has, the better. Rank option 5b, however, can also help maximize damage on organic (nonsynthetic) targets. The bleed effect left by grenades can add a significant amount of damage to enemies, especially if you've chosen Rank 4b (increase in impact radius). The drawback to Rank 5b is that it won't affect synthetic targets such as the geth or turrets.

## Rank 6 Analysis

At maximum rank, players can either increase armor-piercing abilities or add an EMP pulse to the explosion to affect shields. Both options help further weaken protected enemies, but once again, you must choose whether you'll be weakening organic (armored) or synthetic (shielded) enemies. If you chose Rank 5b (adding a bleed effect), then select Rank 6a to complement your power selection.

## INCENDIARY AMMO

Shoot and your enemy will burst into flames. Increases weapon damage, eats through armor, and can make an enemy panic.

**Rank 1—Health damage:**  
+10%; Armor damage: +10%

**Rank 2—Panic:** Improve  
the odds of panicking a target  
by 15%

**Rank 3—Damage:** Increase  
health and armor damage  
bonuses by 4%

**Rank 4a—Damage:**  
Increase health and armor  
damage bonuses by 6%

**Rank 4b—Squad Bonus:**  
Squadmates gain Incendiary  
Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:**  
Increase ammo capacity by  
30%

**Rank 5b—Headshots:**  
Increase headshot damage  
by 25%

**Rank 6a—Damage:** Increase  
health and armor damage  
bonuses by 10%

**Rank 6b—Explosive  
Burst:** Ignite enemies with  
an intermittent explosion  
that covers 2.5 meters for 100  
damage

## Ranks 1 through 3 Analysis

Incendiary Ammo is a great power for a damage-dealer like James because it makes all weapon fire even more lethal. With Incendiary Ammo (or any Ammo power), it's best to activate it before every mission and make sure you keep it active at all times. When active, it extends damage over time and sets enemies ablaze. It also functions as a "source" power that can be detonated using other powers like Concussive Shot, Sticky or Frag Grenades, or even Carnage.

## Rank 4 Analysis

At Rank 4, Incendiary Ammo can either increase damage to health and armor (4a), or you can gain the ability to automatically grant it to all squadmates when active (4b). The choice really breaks down to whether you want James to tank and dish out as much damage as you can or want him to hang back as part of the squad. If you're playing as a class that does not have an Ammo power (Cryo Ammo, Warp Ammo, or

Incendiary Ammo), you can select Rank 4b and gain the use of James's Incendiary Ammo when he's on a mission with you. Otherwise, select Rank 4a and increase his ability to inflict as much damage as possible.

## Rank 5 Analysis

At Rank 5, James can select to either carry 30 percent more ammunition or to increase headshot damage by 25 percent. To make the best use of this selection, take into account what types of weapons James will be equipped with. James cannot carry a sniper rifle, so don't select Rank 4b in hopes of making him a deadly sniper-class squadmate. Instead, select it if you frequently task James with attacking from a distance with an assault rifle. Again, if you prefer James to serve as the team's tank, equip him with a shotgun and select Rank 4a. He'll benefit from the increased ammunition count when engaging enemies in close combat—the shotgun's best range.

## Rank 6 Analysis

Both options in Rank 6 increase Incendiary Ammo's damage output. However, Rank 6a is for a health and armor damage increase across the board. This makes all shots with Incendiary Ammo all the more powerful since it's a good general increase to overall damage. Rank 6b adds an entirely new effect to shots taken using Incendiary Ammo. Instead of simply dealing more damage to health and armor, it ignites enemies and explodes, causing more damage in a wider radius and reaching more enemies nearby. Your Rank 6 option should depend on whether you want James to take down enemies one at a time, or if you want to use him like a tenderizer, softening up groups of enemies for the rest of your squad to finish off.

## TIP

**By selecting Ranks 4b, 5a, and 6b, you can utilize James like a one-man assault line. The combination of increased ammo capacity and increased damage radius will allow James to soften up small groups of enemies before the rest of the squad approaches. Meanwhile, James's Rank 4b (granting the squad Incendiary Ammo) will increase the rest of the squad's ability to finish enemies off quickly.**

## FORTIFICATION (UNIQUE)

Reinforce armor using protective Foucault currents. Purge the current and send its charge to your gauntlets for increased melee damage. Slow power use.

**Rank 1—Recharge Speed:** 10 sec.; Damage Reduction: 15%; Melee Damage Bonus: 50%

**Rank 2—Recharge Speed:** Increase recharge speed after detonation by 25% when armor is purged

**Rank 3—Melee Damage:** Increase melee damage bonus by 20% when armor is purged

**Rank 4a—Durability:** Increase damage protection by 5%

**Rank 4b—Melee Damage:** Increase melee damage bonus by 30% when armor is purged

**Rank 5a—Recharge Speed:** Increase shield recharge rate by 15%

**Rank 5b—Power Synergy:** Increase power damage and force by 20% while Fortification is active

**Rank 6a—Power Recharge:** Reduce power speed penalty by 30%

**Rank 6b—Durability:** Increase damage protection by 10%

### Ranks 1 through 3 Analysis

This power's true strength is in close-quarters combat. When active, James will take less damage and will gain melee damage output. When equipped with a shotgun, this power can be James's bread and butter. Activate it before rushing into battle and James can inflict a great deal of damage on enemies using melee attacks alone. Couple it with the ultradestructive power of a shotgun, and you'll frequently find that James has the situation handled before you can even reach the target.

### Rank 4 Analysis

Rank 4 options depend on whether you want James to function more like a damage-absorbing tank or a damage-dealing tank. If your squad is built to rush and overwhelm enemies, then select Rank 4b. This will increase James's ability to deal damage in melee combat and end hostile encounters quicker. However, if you want James to be an all-purpose tank capable of taking on groups of enemies alone while the rest of the squad handles other foes, or if you want him to be a one-man flank or a one-man front line, then select Rank 4a. This will allow him to take more damage while you execute your tactical maneuvers.

### Rank 5 Analysis

This rank option is about offense vs. defense. Keep your Rank 4 selection in mind when making a choice here. If you want James to be a more defensive soldier, select Rank 5a. This will recharge his shield quicker and keep him in the fight longer. To go with an offensive powerhouse, select Rank 5b. It will increase the damage dealt by powers, as opposed to weapons fire, so using Carnage while Fortification is active will increase Carnage's damage and force by 20 percent.

### Rank 6 Analysis

Rank 6a reduces that power speed penalty by 30 percent. This will let James unleash destructive power blasts while not sacrificing any speed in the power department. Selecting Rank 6b will reduce the amount of damage James takes overall. If you've selected 4a and 5a, select Rank 6b to make James as tough and durable as possible.

## CARNAGE (UNIQUE)

Rip a target into shreds with this vicious blast. Major collateral damage to enemies nearby. Effective against armor.

**Rank 1—Recharge speed:** 20 sec.; Damage: 315; Radius: 1.5 meters

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Radius:** Increase impact radius by 50%

**Rank 4b—Damage:** Increase damage by 30%

**Rank 5a—Incapacitate:** Incapacitate enemies by knocking them down

**Rank 5b—Recharge Speed:** Increase recharge speed by 35%

**Rank 6a—Armor Damage:** Increase damage to armored units by 65%

**Rank 6b—Damage:** Increase damage by 50%

### Ranks 1 through 3 Analysis

By far one of James's best powers, Carnage is perfect for players who want James to be a damage-dealing machine. It's not the most graceful or elegant of the powers, and it may not even be the most unique, but it is one of the most effective powers across the board. This singular blast can shred through many foes with ease even if they're equipped with armor.

### Rank 4 Analysis

At this rank, you must choose whether to use Carnage to shred single enemies, one at a time, or whether to use it to soften enemies in groups. If you've chosen Frag Grenades Rank 4b and Incendiary Ammo Rank 6b, then you'd do well to also select Rank 4a of Carnage. This increases the damage radius of all your powers and maximizes the amount of damage that James can do to small groups. However, if you want James to single-handedly take on Brutes and Banshees, then select Rank 4b. This will help increase the damage he can do to a single enemy and ease the pressure for the rest of the group when encountering these tougher foes.

### Rank 5 Analysis

If an enemy is on the ground, it can't fight back. In many cases, it's often better to knock enemies down or away than it is to inflict damage. Fast foes like Phantoms can take bullets and quickly recover on their way to their next attack. When facing these foes, it's better for James to knock them down and allow the rest of the squad to take them out. If James is going to function like the first line of offense on a well-rounded team, select Rank 5a. He'll knock them down, and the rest of the team will knock them out. For squads that require James to use multiple powers and to attack quickly rather than heavily, select Rank 5b. This will increase the recharge speed of James's powers and allow him to use powers more frequently.

### Rank 6 Analysis

Both of the final Carnage ranks increase damage. Rank 6a increases damage to armored foes like Cerberus soldiers, and Rank 6b simply increases damage across all types of targets. Rank 6b is the obvious choice since not every enemy you face is armored, but Rank 6b is especially useful against any enemy with armor, including Cannibals that have fed and certain Geth Troopers.

## ARMS MASTER (UNIQUE)

Boost offensive and defensive abilities.

**Rank 1—Health/Shields:** +20%;  
Weapon damage: +10%

**Rank 2—Damage and Durability:**  
Increase health and shield bonuses by 20%;  
increase weapon damage bonuses by 10%

**Rank 3—Damage and Durability:**  
Increase health and shield bonuses by 20%;  
increase weapon damage bonuses by 10%

**Rank 4a—Durability:** Increase  
health and shield bonuses by 40%

**Rank 4b—Weapon Damage:**  
Increase weapon damage bonus by  
20%

**Rank 5a—Power Damage:** Increase  
power damage by 20%

**Rank 5b—Shield Recharge:**  
Decrease shield-recharge delay by  
~20%

**Rank 6a—Squad Bonus:** Increase  
squadmate health and shields by 20%

**Rank 6b—Fortification:** Increase  
health and shield bonuses by 30%;  
increase melee damage by 100%

### Ranks 1 through 3 Analysis

The first three ranks of this passive skill raise James's health and shields and weapon damage bonuses to 60 and 30 percent, respectively. You can stop here and use any future upgrade points on other powers if you'd like. After all, even with the first three ranks upgraded, James becomes a formidable opponent capable of tanking in most situations.

### Rank 4 Analysis

If you do invest more points in James's passive powers, you can select to either take more damage or dish it out. The two choices in Rank 4 complement many of James's other power trees. Rank 4a will allow you to take more damage, augmenting his tanking abilities. Conversely, Rank 4b will augment James's damage output, making him deadlier on the battlegrounds. Make your selection here based on your Fortification choices. If you chose both Durability options in Fortification, select 4a here as well.

### Rank 5 Analysis

This is another rank where you must choose between damage increases or the ability to stay in a fight longer. Even though option 5b doesn't directly increase your shields or health, it will help keep James's shields charged longer by reducing the delay in shield-recharge time. That means his shields will go into recharge mode faster and get him back into the battle quicker. Rank 5a is a simple increase in power damage, which is never a bad thing. Powers like Carnage and Incendiary Ammo will become even more deadly.

### Rank 6 Analysis

Players who want to invest in James's passive powers all the way can select either a Fortification bonus (6b) or a Squad Bonus (6a). The obvious choice here is one that complements your Fortification choices. In order to make James the ultimate tank, select Rank 6b. If you've chosen squad-based power increases like Incendiary Ammo 4b, then select Rank 6a here to also grant your squad a health and shield bonus.

## BUILD OPTIONS

### TANK: DEFENSIVE

**Fortification:** Ranks 4a, 5a, 6b

**Incendiary Ammo:** Rank 5a

**Arms Master:** Ranks 4a, 5b, 6b

There are different ways to tank with James. A defensive tank can hold off large enemies or engage small groups while the rest of the team either inflicts damage or accomplishes tasks and maneuvers. A defensive tank won't inflict a lot of damage, but he will absorb it.

### TANK: OFFENSIVE

**Arms Master:** Ranks 4b, 5a

**Fortification:** Ranks 4b, 5b

**Frag Grenade:** Ranks 4a, 5b, 6a or 6b

**Incendiary Ammo:** Ranks 4a, 5b, 6b

**Carnage:** Ranks 4b, 6b

Where a defensive tank can fend off enemies for the rest of the squad, an offensive-minded tank can inflict a lot of damage at the cost of absorbing it. An offensive tank won't be able to stand toe-to-toe for long against a Brute or a Banshee, but he shouldn't need to. With this combination of powers, James can deplete an enemy's health nearly entirely or at least enough for the rest of the squad to finish them off.

## ROMANCE

Even though you can interact and speak with James on plenty of occasions (to get to know all about him and his rich history), James Vega is not a romance option for either male or female Shepard.

## KAIDAN ALENKO (SENTINEL)

Major Kaidan Alenko is a human Biotic and an officer in the Systems Alliance. He served as staff lieutenant under Commander Shepard on the SSV *Normandy* during the Battle of the Citadel and now heads the Special Operations Biotics Division at the Alliance Warfare Center. An Alliance tribunal recently called on Alenko to testify about his experience with the Reapers.

Alenko suffers from severe headaches because of the early-model L2 Biotic implants that he was given as a child. The L2 implants have since been discontinued due to the risk of crippling neurological damage.

### PREVIOUSLY IN MASS EFFECT

Kaidan is a returning character from *Mass Effect 1* and *Mass Effect 2*. Part of Shepard's crew in *ME1*, he's returning again to join Shepard's crew. In *Mass Effect 2*, Kaidan was one of the crew members ejected to safety when the first *Normandy* was destroyed. He assumed that Shepard died in that attack. When Kaidan found out that Shepard was not only alive but also was working for Cerberus, he was upset and suspicious. Shepard must regain the trust of this old friend (and potential former lover).

### NOTE

New players can recruit either Kaidan or Ashley to your crew based on your Crew Loss decision at the beginning of the game. You cannot recruit both.

Uniform 1

Uniform 2

### TACTICAL ROLE

Kaidan is a versatile weapon with strengths in Biotic and Tech fields. While he's not equipped for dealing a lot of weapon damage like other squadmates, he does do a lot of power damage. His combination of the powers Barrier, Reave, and Overload still make him a great asset to have in battle when facing strong enemies. Rather than deal lots of damage, Kaidan can weaken enemies by siphoning their health and overloading synthetics with power surges, and he can incapacitate them by lifting them off the ground.

Even Cryo Blast, one of his best powers, can be used more to slow down and freeze enemies than destroy them. Once frozen or chilled, however, enemies are more susceptible to taking damage or shattering altogether. Since Kaidan can only carry an assault rifle or pistol, consider using him on missions where a good mid- to long-range weapon is handy.

Kaidan can also help tank when necessary. He may not be as effective as James in the tank role, but if Kaidan's Barrier power is upgraded properly at Ranks 4 and 6, then he can sustain damage better than his squadmates. His passive power, Alliance Officer, will also help increase his durability, allowing him to take even more damage while tanking.

## POWERS

## OVERLOAD

Overload electronics with this power surge, stunning your enemy. Effective against shields, barriers, and synthetics. Not as effective against organics.

**Rank 1—Recharge Speed:** 16 sec.; Damage: 220

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Chain Overload:** Hit one additional target within 8 meters with 60% less damage

**Rank 4b—Damage:** Increase damage by 30%

**Rank 5a—Neural Shock:** Incapacitate weaker organic enemies for a short duration

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Chain Overload:** Increase damage by 15%. Hit one additional target within 8 meters with 60% less damage

**Rank 6b—Shield Damage:** Increase damage to barriers and shields by an additional 100%

## Ranks 1 through 3 Analysis

By far one of the most useful powers against synthetics, Overload can temporarily fry electrical equipment like turrets and single synthetic foes. At Ranks 1 through 3, you gain a standard recharge speed and damage increase, so you could stop upgrading at Rank 3 if you don't plan on making Overload an integral part of Kaidan's attack arsenal. However, during missions where you encounter geth or other synthetic opponents, Kaidan can still prove to be very useful.

## Rank 4 Analysis

If you do make Overload a more integral part of Kaidan's attack arsenal, then consider upgrading to Rank 4a. This will increase the amount of targets he can affect by one. So instead of overloading only one enemy at a time, he can stun multiple enemies with each Overload blast. Rank 4b is a standard damage increase. Select this if you want Kaidan to focus more dealing damage to individual enemies.

## Rank 5 Analysis

At Rank 5, you gain the option to stun organic foes and synthetics. For players who want a good all-purpose tank, select Rank 5a. The Neural Shock ability will expand Kaidan's role across a number of missions since he'll no longer be effective against synthetic targets alone. Rank 5b increases Overload's recharge speed, allowing him to use the skill more frequently in battle. The trade-off between Ranks 5a and 5b is simple: If you want to use Kaidan against more varied types of enemies, select 5a. If you want to use Kaidan more frequently in battle to stun enemies en masse, select Rank 5b.

## Rank 6 Analysis

Like Rank 4a, Rank 6a will increase how many targets Kaidan can reach with an Overload blast by one and will increase the damage it inflicts by 15 percent. The choice is simple: If you selected Rank 4a, make the same selection here and Kaidan can stun small groups of enemies with one Overload blast. Not only will he incapacitate more enemies at once, but also you'll expend less power to do it. At Rank 6b, you can increase the damage dealt to barriers and shields, making Kaidan extremely effective against all shielded foes.

## CRYO BLAST

Flash-freeze and shatter unprotected enemies. Slow down the rest. Weaken armor. Frozen targets won't regenerate health.

**Rank 1—Recharge Speed:** 8 sec.; Freeze Duration: 4 sec.; Movement Speed: -15%

**Rank 2—Recharge Speed:** Improve recharge speed by 25%

**Rank 3—Duration:** Increase power duration by 40%

**Rank 4a—Duration:** Increase power duration by 60%

**Rank 4b—Radius:** Increase impact radius by 2 meters

**Rank 5a—Speed Reduction:** Decrease movement speed of chilled targets by an additional 20%

**Rank 5b—Cryo Explosion:** Increase damage to chilled and frozen targets by 10%

**Rank 6a—Recharge Speed:** Increase recharge speed by 50%

**Rank 6b—Frozen Vulnerability:** Increase damage to frozen and chilled targets by 15%; weaken armored targets by an additional 25%

## Ranks 1 through 3 Analysis

By upgrading Cryo Blast up to Rank 3, you can increase the duration of freeze effects to nearly 6 seconds while decreasing the recharge speed for the power to 6.4 seconds. That means that if you use Cryo Blast heavily, Kaidan can fire a blast nearly every 6 seconds and freeze enemies for about the same time. So if you time things properly, you can theoretically keep a target frozen indefinitely until the rest of the squad can finish them off. This skill also works as a "source" power for cryo explosions. Once affected by Cryo Blast, targets can then be detonated using a detonator power like Concussive Shot, Shockwave, or Overload.

## Rank 4 Analysis

The main benefit of Cryo Blast is that you can slow enemies and potentially freeze them in place, removing them from the equation on the battlefield. At Rank 4 you must choose whether to slow singular enemies for longer periods of time (great against larger, more powerful enemies) or to slow multiple enemies for less time. Make your selection here based on whether you want Kaidan to focus more on crowd control or damage output.

## Rank 5 Analysis

At Rank 5, you can augment damage inflicted to enemies affected by Cryo Blast with Rank 5b. Once the enemy is frozen or chilled, the cryo effects make enemies that are frozen or chilled take 10 percent more damage from all sources; this is useful on bigger enemies as a debuff. If crowd control is your goal, select Rank 5a. This slows down enemy movement by an additional 20 percent, making foes move 35 percent slower overall. When combined with Rank 4a, the decrease in movement speed makes for an overwhelming advantage on the battlefield. Not only will foes move slower, but also they'll do so for nearly seven seconds.

## Rank 6 Analysis

Players who want to focus on using more powers over weapons should select Rank 6a. This will increase the recharge speed for Cryo Blast and allow Kaidan to use it far more frequently on the battlefield. This is best when using Kaidan as a crowd-control specialist. However, if you want to make Kaidan an explosive specialist, select Rank 6b to increase the target's vulnerability. When used in conjunction with Overload, Kaidan can obliterate enemies on the battlefield with ease.

## BARRIER (UNIQUE)

Reinforce armor with this Biotic field. Detonate the field to lift and dangle nearby targets. Reduce all forms of damage taken. Slow power use.

**Rank 1—Recharge Speed:** 20 sec.; Damage Reduction: 15%; Blast Damage: 90; Blast Radius: 3 meters

**Rank 2—Recharge:** Increase recharge speed after detonation by 25%

**Rank 3—Blast Effect:** Increase the damage, force, and radius of the detonation by 20%

**Rank 4a—Blast Effect:** Increase the damage, force, and radius of the detonation by 30%

**Rank 4b—Barrier Strength:** Decrease damage taken by 5%

**Rank 5a—Shield Recharge:** Increase shield regeneration rate by 15% while Barrier is active

**Rank 5b—Power Synergy:** Increase damage and force by 25% while Barrier is active

**Rank 6a—Power Recharge:** Reduce power speed penalty by 30%

**Rank 6b—Barrier Strength:** Decrease damage taken by 10%

### Ranks 1 through 3 Analysis

Barrier is a unique power that serves as a temporary defensive measure with an offensive kick. When activated, it increases shields and reduces all damage taken, be it melee, weapons, or powers. Once detonated, however, it releases a blast effect that inflicts a decent amount of damage on nearby enemies and lifts them into the air. Overall, this is an extremely valuable power in Kaidan's arsenal. Not only can it increase his shields and damage enemies, but it also makes enemies vulnerable to weapons fire from the rest of the squad as they dangle in midair.

### Rank 4 Analysis

Your first option when upgrading Barrier is to either lean toward damage output (Rank 4a) or defense (Rank 4b). This will determine whether Kaidan will help tank during missions or be another offensive weapon on your crew.

### Rank 5 Analysis

Another choice between offense or defense, Rank 5 can either grant Kaidan the ability to regenerate his shield 15 percent quicker (allowing him to tank and stay in fights longer) or increase the damage and force while Barrier is active. The best course of action here is to keep your Rank 4 selection in mind.

### Rank 6 Analysis

The final rank upgrade will determine whether Kaidan leans more toward Biotic combat (6a) or tanking (6b). If Kaidan is focusing on Biotic combat, then select Rank 6a. The reduction in power speed penalty means that Barrier won't deplete as quickly when used. However, if you've chosen Rank 4b, then also select Rank 6b to further increase Barrier Strength and reduce damage. At this level, Kaidan can tank with the best of them.

## REAVE (UNIQUE)

Drain a target's health and disrupt their resistances, receiving increased damage protection while this power is in effect. Effective against barriers and armor.

**Rank 1—Recharge Speed:** 16 sec.; Damage Per Second: 60; Duration: 4 sec.; Damage Reduction: 15%

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration:** Increase power duration by 35%

**Rank 4a—Duration:** Increase power duration by 40%

**Rank 4b—Radius:** Increase impact radius by 3 meters

**Rank 5a—Damage Reduction:** Increase damage protection by 10%

**Rank 5b—Recharge Speed:** Increase recharge speed by 35%

**Rank 6a—Barriers and Armor:** Increase armor and barrier effectiveness by 75%

**Rank 6b—Damage and Duration:** Increase damage and duration by 30%. Increase damage protection bonus by 15%

### Ranks 1 through 3 Analysis

This vampiric power allows Kaidan to deplete a target's health while increasing his own damage resistance. Better still, it is effective against barriers (shields) and armor. Like Barrier, this multifaceted skill can either make Kaidan a better tank or increase his ability to inflict damage. By upgrading it to Rank 3, you can decrease the recharge speed for this power to less than 13 seconds while increasing the duration of its effect to nearly 6 seconds. If you stop upgrading the power at Rank 3, Kaidan can use the skill to weaken single enemies and increase his tanking ability.

### Rank 4 Analysis

At Rank 4, you must decide whether Kaidan will affect multiple enemies in a three-meter radius (4b), weakening multiple targets at once, or if you want his Reave power duration to last 40 percent longer (4a). Make your selection here based on what you plan to choose for Rank 6. If power duration is your goal, then select Rank 4a. This will benefit Kaidan greatly if you eventually select Rank 6b. However, if you'd like to impact more enemies each time Kaidan uses Reave, select Rank 4b.

### Rank 5 Analysis

Once again, you're given a choice between gearing Kaidan to be a tank (Rank 5a) or a damage dealer by increasing the recharge speed of his Reave ability (Rank 5b). If you've already started making Kaidan a tank, there's no point in selecting Rank 5b. The increased power duration of Rank 5a means he'll stay stronger longer and make him more capable of sustaining one-on-one combat against a tough enemy or one-on-many combat if the need ever arises.

### Rank 6 Analysis

Your final choice when upgrading Rank 6 is a bit more difficult. Both options increase the effectiveness of Kaidan's damage resistance, but in different ways. Where Rank 6a increases the damage done to armor and barrier by a whopping 75 percent, Rank 6b increases the damage and duration of Reave's health-siphoning ability, thereby increasing his shields and armor as a result. The main difference between both options is that Rank 6a protects him better while Rank 6b inflicts more damage on enemies at the cost of less defense.

## ALLIANCE OFFICER (UNIQUE)

Boost weapon damage, health, and shields/barriers.

**Rank 1—Health and Shield Bonus:** 15%; Power Damage Bonus: 15%

**Rank 2—Damage and Durability:** Increase health, shield, and power damage bonuses by 15%

**Rank 3—Damage and Durability:** Increase health, shield, and power damage bonuses by 15%

**Rank 4a—Weapon Damage:** Increase weapon damage by 20%

**Rank 4b—Durability:** Increase health and shields by 30%

**Rank 5a—Biotic Damage:** Increase Biotic power damage by 30%

**Rank 5b—Tech Damage:** Increase Tech power damage by 30%

**Rank 6a—Squad Bonus:** Increase squadmate Tech and Biotic power damage by 10%

**Rank 6b—Squad Bonus:** Increase recharge speed of squadmates' shields by 15%

### Ranks 1 through 3 Analysis

At Ranks 1 through 3, Alliance Officer increases Kaidan's damage and durability up to 45 percent across the board. These three upgrades alone make it possible for Kaidan to tank during missions. However, the increase in power damage also makes it possible for Kaidan to rely more on Biotic powers and less on weapon damage. If you want Kaidan to be a Biotic specialist, then upgrade at least to Rank 3 for this passive power.

### Rank 4 Analysis

Players who want Kaidan to tank should select Rank 4b. This will increase his health and shield bonus to an impressive 75 percent. Kaidan will be able to take more damage and, in conjunction with other powers like Barrier and Reave, make him an impressive damage-absorbing squadmate. If you want to compensate for Kaidan's Biotic leaning, select Rank 4a. This increases his weapon damage and balances out his damage output.

### Rank 5 Analysis

Both options in Rank 5 increase Kaidan's ability to deal damage. Rank 5a augments Kaidan's Biotic damage by 30 percent, making powers like Cryo Blast increasingly deadly. Similarly, Rank 5b augments Kaidan's Tech damage, making powers like Reave more deadly. Since fewer skills will benefit from a Tech damage increase, we suggest going with Rank 5a.

### Rank 6 Analysis

Like Rank 5, this rank augments one target but in different ways. Rank 6 is a squad bonus. Either increase your squad's Tech and Biotic power damage for the squad (6a) or increase the recharge speed of the entire squad's shields (6b). The difference between both options is whether you want Kaidan to support your squad's damage output or defensive capabilities.

## BUILD OPTIONS

### CROWD CONTROL/TANK

**Overload:** 4a, 5a, 6a

**Cryo Blast:** 4b, 5a, 6a

**Barrier:** 4b, 6b

**Reave:** 5a, 6a or 6b

**Alliance Officer:** 4b

Kaidan's unique skill set makes him a perfect candidate for crowd control or tanking. Powers like Overload and Cryo Blast can stun and slow enemies long enough for the rest of the squad to attack. Use these skills on groups of enemies to slow their advance and halt their attacks. Similarly, skills like Barrier and Reave increase Kaidan's defensive abilities, allowing him to sustain more damage. When all of these powers are combined, Kaidan can lead a charge and distract enemies either by slowing them or absorbing damage, while the rest of the squad inflicts the majority of damage.

### BIOTIC/TECH DAMAGE

**Overload:** 4b

**Cryo Blast:** 4a, 5b

**Barrier:** 4a, 5b

**Reave:** 5b, 6b

**Alliance Officer:** 4a, 5a or 5b, 6a

When upgraded properly, Kaidan can also become an extremely effective damage dealer. Select upgrades that augment power damage. This will ensure he can use offensive powers like Cryo Blast more frequently. Better still, he can lead with Cryo Blast, follow up with Overload, and create a massive Cryo Explosion that can destroy one foe while inflicting damage on other nearby enemies. Alliance Officer Rank 4a will also help increase weapon damage in order to balance his damage output, while both Rank 5 options for Alliance Officer will also augment damage output.

## ROMANCE

Kaidan is a romance option for female Shepard. He can be romanced by a new Shepard and by a Shepard who did not romance him in previous games. Take time to go to the Citadel and visit him in the hospital early and often in the game in order to build up intimacy.

### KEY CONVERSATIONS

On Mars, Kaidan remains distrustful of Shepard and Shepard's relationship with Cerberus. While it's tempting to get angry, choosing the Paragon options allows Shepard to defend himself without alienating Kaidan.

Later, Shepard has multiple chances to visit Kaidan in the hospital: immediately after arriving at the Citadel for the first time (Kaidan is unconscious but will learn that Shepard came to see him), after completing the mission at Palaven (Kaidan is in bed and injured), and once more before finishing the Genophage missions (Kaidan is up on his feet, preparing to be discharged). These conversations give Shepard the chance to build up intimacy and to build up a level of trust to ensure that Kaidan won't force Shepard to kill him in the confrontation on the Citadel.

### TIP

**Bring Kaidan a bottle of TM-88 Peruvian whiskey in the hospital as a gift to increase intimacy. If Shepard had a relationship with Kaidan in *Mass Effect 1* but subsequently pursued another relationship with him or her in *Mass Effect 2*, Kaidan is angry and hurt during his talks at the hospital. Apologize and make it clear that you want to be with him. This is key to continuing a relationship and getting back his trust.**

### KEY MOMENT

Kaidan offers to meet Shepard on the Citadel at the café on the Presidium Commons. If Shepard has established high enough intimacy, Kaidan brings up the possibility of a relationship (or continuing the existing relationship).

# LIARA T'SONI

Dr. Liara T'Soni is an asari information broker with a background in scientific research on Prothean technology. Born on Thessia in 2077, she is the only child of the late Matriarch Benezia, although mother and daughter became estranged in the years before Benezia was indoctrinated by the Reaper known as Sovereign. T'Soni is also a highly trained Biotic who served under Commander Shepard aboard the SSV *Normandy* before the ship was destroyed in a Collector attack.

Before she became involved in galactic affairs, Dr. T'Soni spent 50 years researching the Protheans' technology and the mystery of their extinction. She now spends her time running her information network, looking for anything to give them an edge against the Reapers.

## PREVIOUSLY IN MASS EFFECT

Liara is a returning character from *Mass Effect 1* and *Mass Effect 2*. After the events of the *Mass Effect 2*, Liara became the new Shadow Broker. In addition to fighting in Shepard's squad, she can offer special insight and unique (sometimes disturbing) information based on her nearly limitless intelligence network.

Liara has matured since the events in the first two games: She's more confident and driven, determined to take action against the Reapers instead of just reacting to their plans. While the Shadow Broker has a reputation for being ruthless, Liara hasn't lost her compassion or curiosity. She's simply better equipped via her information network to see the entire scope of the war, and she knows that casualties will be high before it's over. In her heart, Liara can't help but believe the galaxy will prevail against the Reapers if they work together.

## TIP

There's a terminal in Liara's office that offers you things like weapon damage bonuses, power cooldown bonuses, store discounts, and more. Many of these bonuses become available when you retrieve certain Galaxy at War assets.

Uniform 1

Uniform 2

## TACTICAL ROLE

Liara is a surprisingly versatile squad member. Her ability to wield disruptive and destructive powers make her one of the best people to keep in your squad across nearly every mission. She is also one of the few squad members who doesn't excel against one type of foe—synthetic and organic foes alike are susceptible to her abilities.

Since she can only carry an SMG and pistols, she doesn't have a lot of destructive power with weapons. When she's in your squad, make heavy use of powers like Singularity to redirect enemies, create bottlenecks, and set traps. Singularity is her most powerful tool when trying to control crowds. Better still, Singularity, Warp, and Stasis are all source powers, perfect for other squadmates with detonate powers to ignite and create explosive power combinations.

## POWERS

## WARP

Rip your enemy apart at a molecular level. Stop targeted enemy from regenerating health. Weaken armor.

**Rank 1—Recharge Speed:** 16 sec.; Damage: 250; Duration: 10 sec.

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Detonate:** Increase force, damage, and impact radius of combo detonations by 50%

**Rank 5a—Lasting Damage:** Increase damage by 40%; increase duration by 60%

**Rank 5b—Expose:** Increase weapon damage taken by a target by 15%; increase power damage taken by 15% for 10 seconds

**Rank 6a—Pierce:** Increase damage to barriers and armor by 50%; weaken armored targets by an additional 25%

**Rank 6b—Recharge Speed:** Increase recharge speed by 35%

## Ranks 1 through 3 Analysis

Warp is a great power, perfect to use against Reapers and Cerberus scum. Even at low ranks it can deal 300 points of damage on an enemy for up to 10 seconds. You can stop upgrading at Rank 3 and use Warp strictly as a source power for power combinations, but its value is far beyond using simply as a source, so consider making Warp one of your go-to skills when Liara is on your team.

## Rank 4 Analysis

At Rank 4, you can either increase damage (Rank 4a) up to 375 points of damage, a worthwhile investment, or you can add a unique detonate ability (Rank 4b). This benefit is gained only when using Warp as a source power and another power is used to detonate it. When it does, Rank 4b will increase all aspects of the detonation by 50 percent. When combined with Pure Biotic upgrades, Rank 4b is an integral choice in Warp's upgrade tree.

## Rank 5 Analysis

Rank 5a, Lasting Damage, increases both damage and duration of Warp, making it deadlier and longer lasting. It may not be fancy, but the selection amplifies two of Warp's three most important components. If you plan on frequently using Warp as a stand-alone attack, then select Rank 5a. Expose, Rank 5b, increases both weapon and power damage to targets affected by Warp. This is useful when you want to weaken enemies and allow your squadmates to inflict additional damage while Liara's powers recharge.

## Rank 6 Analysis

The final upgrade tree in Warp either increases its recharge speed to maximum, lowering the recharge speed to 10 seconds (Rank 6b), or increases piercing ability to weaken barriers and armor (Rank 6a). Like Rank 5b, the benefits of Rank 6a allow your squadmates to pour on additional damage to affected enemies. This particular upgrade is perfect when facing Brutes, Atlas Mechs, and Banshees.

## SINGULARITY

Create a sphere of dark energy that traps and dangles enemies caught in its field.

**Rank 1—Recharge Speed:** 9 sec.; Duration: 4 sec.; Radius: 1.5 meters

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration and Radius:** Increase Singularity's hold duration by 20%; increase impact radius by 20%

**Rank 4a—Duration:** Increase Singularity's hold duration by 30%; additional enemies can be lifted before Singularity fades

**Rank 4b—Radius:** Increase impact radius by 25%

**Rank 5a—Lift Damage:** Inflict 20 damage per second to lifted targets

**Rank 5b—Recharge Speed:** Increase recharge speed by 30%

**Rank 6a—Expand:** Expand the Singularity field by 35% for 10 seconds

**Rank 6b—Detonate:** Detonate Singularity when the field dies to inflict 300 damage across 5 meters

## Ranks 1 through 3 Analysis

Singularity may be Liara's greatest power. Capable of lifting several enemies into the air (when upgraded properly), this lasting effect can be used to flush out enemies from behind cover; to lift them into the air, rendering them helpless; and even to function as a source power to create explosive power combinations. At Rank 3, a single foe can be rendered harmless for up to nearly 5 seconds. Better still, that's nearly 5 seconds that Singularity can serve as a source power.

## Rank 4 Analysis

Rank 4 offers two very useful potential upgrades. Either increase the length of Singularity's duration and keep enemies suspended in the air longer (Rank 4a) or widen its reach by increasing its radius (Rank 4b). Both are worthwhile upgrades, but Rank 4a is slightly more useful since it will allow you to pick up even more enemies with a single blast. Upgrade to Rank 4 and unleash a Singularity blast near a crowded area to create a bottleneck for attackers. Even if you don't manage to get multiple enemies in the blast, other enemies will be forced to reroute since the upgraded Singularity will last longer.

## Rank 5 Analysis

If you plan on using Singularity often, perhaps to create multiple explosive power combinations, then select Rank 5b. This will increase Singularity's recharge speed and decrease your waiting time between blasts to less than 6 seconds. That means that you could potentially catch enemies in a massive explosion every 6 seconds. If you want to focus on inflicting damage, then select Rank 6a. This will add 20 points of damage per second for the duration of Singularity. If you chose Rank 4a, then that's an extra 120 points of damage.

## Rank 6 Analysis

At Rank 6, you can expand the Singularity's field by 35 percent for 10 seconds. If you've chosen upgrade Rank 4b, then your Singularity field will be 2.18 meters around. Rank 6a will expand on those 2.18 meters by 35 percent for 10 seconds. By making Singularity last longer and reach farther, you can create countless problems for groups of enemies. Your other option at Rank 6 is to detonate Singularity when the field dies, inflicting 300 extra points of damage across 5 meters. Not only does this remove the need for a detonator power to be added in order to detonate Singularity, but it also reaches farther and causes a decent amount of damage. If you chose Rank 5a, then you could potentially inflict up to 420 damage with one Singularity blast.

## STASIS (UNIQUE)

Stop an enemy in its tracks with this powerful mass effect field. No effect on armored targets. Enemies eventually break out of Stasis after taking major damage.

**Rank 1—Recharge Speed:** 12 sec.; Duration: 6 sec

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Duration:** Increase duration by 30%

**Rank 4a—Duration:** Increase duration by 40%

**Rank 4b—Stasis Strength:** Deal 150% more damage to targets before Stasis breaks

**Rank 5a—Bonus Power:** Use two powers in a row by giving the first power a 30% chance to cause no cooldown

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Bubble:** Unleash a Stasis bubble to trap enemies that walk into it

**Rank 6b—Vulnerability:** Increase all damage done to target by 50%; deal 35% more damage to targets before Stasis breaks

### Ranks 1 through 3 Analysis

Like Warp and Singularity, Stasis can serve as an extremely useful disruptive power. A single blast of Stasis can slow an enemy down entirely. Not only will you gain the advantage of moving faster than the enemy, but also the enemy will be stopped. It actually freezes them entirely and affects targets through shields, so use it to freeze Phantoms, Centurions, Engineers, and other foes.

### Rank 4 Analysis

By selecting Rank 4a, you can increase the duration of Stasis to 10.2 seconds. That's more than enough time to either execute a power combination or allow your squad to focus on the target with weapon fire and obliterate them. If you want to free your squad to concentrate on other foes instead, then select Rank 4b. This will increase the amount of damage a target in Stasis sustains by 150 percent. Then, while a foe is in Stasis, you can turn your weapon on it and increase damage without the need of other squad members. If you have Warp Ammo active, this becomes an even more deadly combination.

### Rank 5 Analysis

With so many useful powers at her disposal, Liara could benefit greatly from the ability to use two powers back-to-back. Select Rank 5a, Bonus Power, to gain a 30 percent chance at skipping a power cooldown when using Stasis. When effective, you could potentially use Stasis and immediately follow up with a second power nearly one-third of the time. This would allow you to create explosive power combinations from the Stasis source power almost every 10 seconds. If you're not the gambling type, then select Rank 5b. This will lower the time it takes to recharge stasis to less than 8 seconds.

### Rank 6 Analysis

Rank 6a grants Stasis a unique added effect. A bubble traps enemies that are foolish enough to walk into it. Like Singularity, Rank 6a is best suited for causing bottlenecks and traps that your squadmates can then capitalize on. Rank 6b can also benefit your squad: It increases an enemy's vulnerability, increasing the amount of damage they take while in Stasis.

## WARP AMMO (UNIQUE)

Blast vulnerable opponents already lifted by Biotics for a damage bonus, and weaken the armor of grounded targets. More weapon damage. More damage to barriers and armor.

**Rank 1—Warp Ammo:** Health Damage Bonus: +10%; Barrier Damage: +20%; Armor Weakening: -25%; Lifted Target Damage: +50%

**Rank 2—Biotic Combo:** Increase damage to lifted targets by 25%

**Rank 3—Damage:** Increase health and armor damage bonuses by 4%; increase barrier damage by 8%

**Rank 4a—Damage:** Increase health and armor damage by 6%; increase barrier damage by 12%

**Rank 4b—Squad Bonus:** Squadmates gain Warp Ammo at 50% effectiveness

**Rank 5a—Ammo Capacity:** Increase ammo capacity by 30%

**Rank 5b—Headshot:** Increase headshot damage by 25%

**Rank 6a—Damage:** Increase health and armor damage by 10%; increase barrier damage by 20%

**Rank 6b—Enhanced Warp:** Increase damage to lifted targets by 50%; weaken armored targets by an additional 25%

### Ranks 1 through 3 Analysis

Warp Ammo is specifically designed to work well with the destructive abilities of nearly all of Liara's other powers. At Rank 2, for example, it increases damage to lifted targets by 25 percent. When coupled with Singularity, this makes for significantly high damage, especially if Singularity is upgraded to Rank 5a, Lift Damage. At the very least, upgrade Warp Ammo to Rank 3 to grant Liara useful ammo power.

### Rank 4 Analysis

Like other ammo powers, Warp Ammo can either increase in damage at Rank 4a or grant your squadmates the ability to use it, albeit at 50 percent effectiveness, at Rank 4b. Your choice should depend on how you expect to use Liara in combat. If she'll be a main source of damage output on the squad, select Rank 4a. If you want to complement the squad with other ammo powers, select Rank 4b.

### Rank 5 Analysis

Since Liara can carry only an SMG or a pistol, then make your selection for the Rank 5 upgrade based on her primary role in combat. Rank 5a increases her ammo count, which is great for weapons that expend a lot of ammunition, like SMGs. Rank 5b increases the amount of damage she inflicts with a headshot, most likely while using pistols. If you intend on using Singularity more than any other power, then select Rank 5a. Enemies will be harder to hit in midair, so an SMG's short bursts will increase your accuracy per bullet. If you intend on using Stasis more, then select Rank 5b. Slowed, grounded enemies will be easier to hit with pistol headshots, so the extra 25 percent damage will be of great help.

### Rank 6 Analysis

Even though both Rank 6 upgrades increase the amount of damage you can deal on targets, you must choose whether to increase bonus damage to health and barrier (Rank 6a) or to weaken armor and increase damage on lifted targets (Rank 6b). Since both choices increase the amount of damage enemies can take, make your selection based on whether you will be using Warp Ammo in conjunction with Singularity more often than not. Rank 6b is the perfect upgrade for Liara builds that favor heavy use of Singularity.

## PURE BIOTIC (UNIQUE)

Boost Biotic and defensive abilities.

**Rank 1—Health and Shield Bonus:** 10%; Power Recharge Speed Bonus: 20%

**Rank 2—Durability and Recharge:** Increase health and shield bonuses by 10%; increase recharge speed bonus by 20%

**Rank 3—Durability and Recharge:** Increase health and shield bonuses by 10%; increase recharge speed bonus by 20%

**Rank 4a—Recharge Speed:** Increase recharge speed bonus of all powers by 40%

**Rank 4b—Durability:** Increase health and shield bonuses by 20%

**Rank 5a—Weapon Damage:** Increase weapon damage by 20%

**Rank 5b—Duration and Force:** Increase power force and duration by 30%

**Rank 6a—Squad Bonus:** Increase recharge speed of all squadmate Biotic powers by 10%

**Rank 6b—Singularity Recharge:** Increase recharge speed of Liara's Singularity by 100%

### Ranks 1 through 3 Analysis

Players who want a Biotic powerhouse on their squad should invest heavily in Liara's Pure Biotic passive power. Even at Rank 3 alone, she gains a 30 percent bonus to her health and shields, making her tougher on the battlefield. She also gets a 60 percent power recharge bonus, meaning she will recharge all power usage 60 percent faster. When coupled with a specific power's recharge speed upgrades (like Stasis's Rank 2 and Rank 5b), Liara will gain the ability to use her powers more frequently than any other soldier on the battlefield.

### Rank 4 Analysis

At Rank 4a, you can increase Liara's power recharge speed even more, up to 100 percent. Rank 4b, on the other hand, will increase her shield and health bonus to 50 percent. Since Rank 4 will either max out your power recharge speed or your health and shields, then you must decide what kind of role Liara will play on the battlefield. If you're using her powers to augment her weapon damage, then select Rank 4a. Increase her health and shield bonus to keep her in the fight longer. If you plan on using her as a Biotic specialist, then select Rank 4a. You'll increase your power recharge speed to 100 percent and gain a significant power advantage.

### Rank 5 Analysis

Like Rank 4, the Rank 5 options are designed to either make Liara a weapon-proficient fighter (Rank 5a) or a power-heavy hitter (Rank 5b). Rank 5a increases weapon damage, further augmenting other upgrades like Warp Ammo's Headshots. Rank 5b, however, increases Liara's power force and duration. This upgrade stacks with all other power-enhancing upgrades.

### Rank 6 Analysis

The final upgrade selection depends on whether you want to make Singularity Liara's main go-to power. If so, the choice is simple: select Rank 6a. The whopping 100 percent increase in Singularity's recharge speed means she can potentially unleash Singularity nearly every 2.5 seconds if you've upgraded Singularity's Rank 5b. If you don't plan on using Singularity often, then select Rank 6a to give your squad increased recharge speed to their Biotic powers.

## BUILD OPTIONS

### BIOTIC: CROWD CONTROL

**Warp:** 6b

**Singularity:** 4a or 4b, 5b, 6a

**Stasis:** 4a, 5b, 6a

**Pure Biotic:** 4a, 5b, 6b

Liara's most effective role on the battlefield is to control crowds, disrupt enemies, and otherwise weaken foes for the rest of the squad to mop up. Powers like Singularity, Stasis, and Warp are all designed to disrupt enemy movements and flush them out of cover. Keep her weapon loadout as light as possible, and bypass all weapon damage modifiers in the upgrade trees. Instead, select all upgrades that augment power recharge speed in order to increase Liara's power usage on the battlefield. Rely heavily on Singularity and upgrade Pure Biotic to Rank 6b to make the best use of it.

### BIOTIC OR WEAPON DAMAGE

**Warp:** 4a, 5a

**Singularity:** 5a, 6b

**Stasis:** 4b, 6b

**Warp Ammo:** 4a, 6a

**Pure Biotic:** 5a, 6b

Liara can also become an efficient damage dealer. Many of the upgrade choices can increase either weapon or power damage. Select these options instead of increasing recharge speed and make the best use of Liara's damage-dealing abilities. If you favor Biotic damage and power combinations, then rely a bit more on powers like Stasis, Warp, and Singularity. All three abilities function as source powers that can be detonated with a squadmate's detonator power, thereby creating large explosions that can inflict damage on nearby foes as well as the main target.

## ROMANCE

Liara is a romance option for both male and female Shepard. She can be romanced by a new Shepard or a Shepard who did not romance her in previous games. Because she joins Shepard early in the game, there are many chances to talk to her and build up intimacy.

### KEY CONVERSATIONS

Liara's first conversation aboard the Normandy offers a chance for players who romanced her in *Mass Effect 1* to explicitly declare that they want to continue the relationship. This does not lock the player into the relationship, but it does ensure that the option to commit to Liara is available during the key conversation. She can also be found on the Citadel at a café on the Presidium Commons (before the second "Priority: Citadel" mission), reading war reports and trying to use the intel she has found to help you. If Shepard speaks with her enough, Liara will also ask to come up to Shepard's cabin, where she will show Shepard a time capsule she has made to tell future generations Shepard's story if they fail to stop the Reapers.

### KEY MOMENT

Eventually she will ask to meet Shepard on the Citadel for a quiet moment. If Shepard has spoken to her enough times, this conversation gives Shepard the chance to commit to a relationship with her.

### Spoiler Alert!

Also, while not specifically tied to the relationship, the conversation immediately after the "Priority: Thessia" mission is a major moment for Liara that any Shepard in a relationship with her will want to see.

# TALI'ZORAH

Tali'Zorah, a quarian machinist, was born in 2161 on the liveship *Rayya*. During her Pilgrimage—a rite of passage in which quarians prove their worth to the fleet—she recovered a geth memory core that proved a rogue Spectre, Saren Arterius, was working with the geth. Consequently, Tali'Zorah became a crew member of the *SSV Normandy*, where she served under Commander Shepard during the Battle of the Citadel.

Tali'Zorah returned to the Migrant Fleet following the destruction of the first *Normandy*. Soon after, the Admiralty Board sent her to the former quarian colony of Haestrom to recover data on the planet's dying sun. Most of her team was killed when they fell under attack from the geth, but Tali'Zorah was narrowly rescued by Shepard and the crew of the rebuilt *Normandy*. The quarian rejoined Shepard to help oppose the Collector threat, but her current whereabouts are unknown.

## PREVIOUSLY IN MASS EFFECT

A returning character from *Mass Effect 1* and *Mass Effect 2*, Tali joins Shepard again, and her character has matured during her time away. She's either an admiral with the quarians or has had her exile rescinded so that she can bring her expertise against the geth to the current war. Tali's people are fighting desperately to survive and reclaim their homeworld, and Tali thinks the fight was stupid, but she is, as always, loyal to the quarians.

Tali continues as a romance option for male Shepard, and Tali has now gotten over a lot of her inexperienced stammering. She's more of an equal for Shepard now, and there's a more playful edge to her banter.

## Spoiler Alert!

The default assumption in *Mass Effect 3* is that Tali survived the suicide mission from *Mass Effect 2* but has been exiled by her people. She joins Shepard after Shepard meets her people and is a required squad member on the geth Dreadnought and Reaper base missions.

However, if you imported a save in which Tali did not survive the suicide mission in *Mass Effect 2*, there is no full replacement character for her in the game. On the geth Dreadnought mission, Admiral Xen accompanies you but not as a full squad member. She stays back in safe positions and mainly talks to you over the radio. During the Reaper base mission on Rannoch, you can choose a squad normally, and Admiral Raan takes the place of Tali for the final decision between the geth and the quarians.

Uniform 2

## TACTICAL ROLE

Tali's weapon arsenal is limited to a shotgun and a pistol. This combination of raw destructive power and precision shooting is the perfect example of Tali's range of potential. Her disruptive powers make her a skilled crowd-control specialist.

Use powers like Sabotage and both drone powers to disrupt enemy movements and force them to bend to your will. For example, if you want a pesky Guardian to turn around and give you its vulnerable side, assign a combat or defense drone to the Guardian and it will appear behind the guarded enemy. When it does, the Guardian will turn around and expose its back.

Other benefits to drone use are obvious, as drones will frequently flush out enemies from behind cover and even chase them around corners and other cover. With skills like Energy Drain and Sabotage, Tali can weaken foes and turn enemies into allies. Between her ability to summon drones and recruit enemies, assigning Tali to your squad is like assigning three extra damage dealers.

## POWERS

## COMBAT DRONE

Deploy this attack drone to stun targets and draw enemy fire.

**Rank 1—Recharge Speed:** 10 sec.; Drone Damage: 40; Drone Shields: 500

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Shields and Damage:** Increase damage and shields by 30%

**Rank 4a—Shields and Damage:** Increase damage and shields by 40%

**Rank 4b—Detonate:** Drone explodes when destroyed, dealing 156 points of damage across a 5-meter radius

**Rank 5a—Shock:** Upgrade drone's short-range attack to deal 130 points of damage across a 2.5-meter radius; drone stuns enemies for a short duration

**Rank 5b—Shields and Damage:** Increase damage and shields by 50%

**Rank 6a—Rockets:** Upgrade drone with long-range rockets that deal 130 points of damage across a 1.5-meter radius

**Rank 6b—Chain Lightning:** Upgrade drone's electrical pulse to jump and hit three additional targets

## Ranks 1 through 3 Analysis

Combat Drone is one of Tali's most useful powers. With it she can summon a drone capable of distracting and destroying foes at higher Ranks. At Ranks 1 through 3, the combat drones won't inflict much damage on foes, but it will serve as a worthwhile complement to any squad. After all, even though it won't dish out much damage, it will absorb up to 650 points of damage. That's 650 points of damage that you or your squadmates won't have to incur.

## Rank 4 Analysis

Rank 4a increases the drone's damage output and shields, meaning it can inflict more damage while taking more damage. This upgrade is worthwhile in all cases, whether you're using the Combat Drone as a defensive decoy or as a damage-dealing complement to your squad. If you want to use the drone as more of an offensive weapon, then select Rank 4b. This adds a detonate ability to the drone to make it blow up when destroyed and inflict up to 156 more points of damage on foes up to 5 meters.

## Rank 5 Analysis

Another upgrade to shields and damage, Rank 5b can maximize the drone's damage at 88 points per attack and an impressive 1,100 to shields—that is, of course, only if you chose Rank 4a. With 1,100 to shields, the combat drone will sustain an impressive amount of damage and stay longer on the battlefield. Your other option is to add a Shock ability to the combat drone's arsenal. With it, the drone can deal even more damage (adding 170 points of damage), and stun foes for a short period of time.

## Rank 6 Analysis

The final two upgrade options for the combat drone are both offensive abilities. Rank 6a adds rockets to a potentially already lethal weapon. Each rocket will inflict 220 points of damage on top of the drone's base damage (or augmented damage if you upgraded Ranks 4a and 5b). Another useful upgrade for players who want Tali to become a drone/damage-dealing specialist.

## SABOTAGE

Sabotage weapons and hack synthetics. Compromised synthetics fight on your side. Affected weapons overheat.

**Rank 1—Recharge Speed:** 16 sec.; Hack Duration: 12 sec.; Radius: 12 meters; Backfire: 150

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Radius:** Increase impact radius by 30%

**Rank 4a—Duration:** Increase power duration by 50%

**Rank 4b—Backfire:** Increase damage taken by 30% when enemy weapons overheat

**Rank 5a—Explosive Hack:** Synthetics explode when destroyed, dealing 120 points of damage across a 3-meter radius

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Berserk:** Hacked synthetics fighting on your side move faster and do 100% more damage

**Rank 6b—Tech Vulnerability:** Increase all Tech power damage done to target by 100% for 10 seconds

## Ranks 1 through 3 Analysis

Sabotage is a useful skill whenever facing synthetic life-forms like the geth. With it, Tali can overwrite their programming and turn enemies into allies. While this is already extremely effective in evening things out, the added explosive backfire can also help dwindle enemy numbers. At Rank 3, Sabotage can impact enemies within a 3.25-meter radius and hack them for 12 seconds.

## Rank 4 Analysis

At Rank 4, you can choose to either increase how long enemies remain hacked (Rank 4a) or how much damage they cause enemies when their weapons explode (Rank 4b). Make your selection here based on Tali's eventual role in combat. If you want her to be a crowd-controlling tech maven, select Rank 4a. This will keep the drones in the field longer and allow you to control your foes. If you want Tali to concentrate on damage-dealing, then select Rank 4b, Backfire. This will increase the amount of damage enemies sustain to 195 points of damage.

## Rank 5 Analysis

Rank 5 has two more upgrades similar to Rank 4. Here, however, choose Rank 5b to increase Sabotage's recharge speed. By doing so, Sabotage will be ready for use in under 11 seconds. This may seem like a long time, but when the effect lasts 12 seconds, the benefits are clear: You'll be ready to launch another Sabotage attack before the first one completely wears off. If you choose Rank 5a, then Sabotage will gain an explosive hack upgrade. Affected synthetics will explode at the end of the hack and inflict an additional 120 points of damage to enemies within a three-meter radius. If you want to concentrate on dealing damage, select Rank 5a—the added damage is worthwhile.

## Rank 6 Analysis

The final upgrade selection for Sabotage can either bolster your hacked allies (Rank 6a) or increase all Tech damage done to the affected enemy for 10 seconds (Rank 6b). If you want to use all hacked enemies as long as possible and turn them on their comrades, then select Berserk (Rank 6a). This will turn hacked foes into formidable allies. Otherwise, select Rank 6b, Tech Vulnerability, to increase the amount of damage Tali can inflict. This is best for players who don't want to bother with crowd control and instead want to focus on damage-dealing.

## ENERGY DRAIN (UNIQUE)

Hit an enemy with this energy pulse to inflict damage and to steal barrier and shield power.

**Rank 1—Recharge Speed:** 16 sec.; Damage: 220; Radius: 1.5 meters; Shields Restored: 50%

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 20%

**Rank 4a—Damage:** Increase damage by 30%

**Rank 4b—Radius:** Increase impact radius by 100%

**Rank 5a—Drain:** Increase shield restoration rate by 50% when draining shields, barriers, or power from synthetic enemies

**Rank 5b—Recharge Speed:** Increase recharge speed by 25%

**Rank 6a—Damage:** Increase damage by 40%

**Rank 6b—Armor Boost:** Reduce damage taken by 15% for 10 seconds by gaining a temporary layer of armor by draining shields, barriers, or energy from synthetics

### Ranks 1 through 3 Analysis

Energy Drain is a vampiric power that allows Tali to syphon away energy from a target and bolster her own shields. By doing so, Tali not only weakens foes for you and the squad to eliminate, but she also increases her durability on the battlefield. At Rank 3, this is a great power for players who want Tali to focus on damage-dealing.

### Rank 4 Analysis

At Rank 4a, Energy Drain increases in damage potential, as it inflicts 330 points of damage on the targeted foe. The effects of this upgrade option are obvious, so select this if you want to focus on damage. Rank 4b increases its radius to three meters. This will affect more nearby enemies and weaken them in small groups for the rest of the squad to finish off.

### Rank 5 Analysis

While Rank 4 can affect two of Energy Drain's four facets (damage or radius), Rank 5 can affect one of the remaining two facets: recharge speed or shields restored. Rank 5b affects Energy Drain's recharge speed, making it possible to use more frequently in battle. This is a simple upgrade option if you want Tali to rely heavily on Energy Drain. If you select Rank 5a, Energy Drain becomes more efficient by restoring more of your shields while draining enemies. This will result in a direct increase in Tali's durability.

### Rank 6 Analysis

The final upgrade selections also give you an offense or defense choice. Rank 6a increases Energy Drain's damage output significantly, raising Energy Drain's damage output to a potential 418 if you also chose Rank 4a. By selecting Rank 6b, armor boost, you can further increase Tali's durability on the battlefield. This is helpful for people who want to use Tali for more tactical maneuvers that may require more time spent running around the battlefield.

## DEFENSE DRONE (UNIQUE)

Deploy this holographic drone to electrocute enemies within its firing range.

**Rank 1—Recharge Speed:** 12 sec.; Drone Damage: 25; Range: 5 meters

**Rank 2—Recharge Speed:** Increase recharge speed by 25%

**Rank 3—Damage:** Increase damage by 30%

**Rank 4a—Duration:** Increase duration by 100%

**Rank 4b—Range:** Increase attack range by 40%

**Rank 5a—Attack Rate:** Increase drone's attack rate by 50%

**Rank 5b—Damage and Range:** Increase damage by 50%; increase attack range by 60%

**Rank 6a—Incapacitate:** Gain a 30% chance to knock down an electrocuted enemy

**Rank 6b—Chain Lightning:** Damage up to two additional nearby targets

### Ranks 1 through 3 Analysis

Like Combat Drone, Defense Drone is an extremely versatile power capable of being upgraded to complement several different types of play styles. But don't let the name fool you. Just because it's a defensive drone doesn't mean that it doesn't inflict damage. It's not as effective as a combat drone at inflicting damage, but it will stun foes and serve as a distraction for lesser enemies. If nothing else, upgrade this power to Rank 3 to create a lure or disruptive force on the battlefield for enemies. Even if it can only inflict 32.5 points of damage (up to Rank 3), its benefits will far outweigh its limitations.

### Rank 4 Analysis

Rank 4a will increase the drone's duration on the battlefield. The obvious benefit is that you'll have a fourth "member" on your squad capable of dealing damage, stunning enemies, and most importantly, at this rank, absorbing damage in place of your crew. If you want to increase how far the drone can attack enemies, then select Rank 4b. This will increase its range up to seven meters, meaning it can stay farther from the enemy but still stun them. This is especially helpful when trying to flush out enemies from behind cover or around corners.

### Rank 5 Analysis

When deciding on Rank 5 upgrades, base your decision on whether you want the drone to attack more frequently (Rank 5a) or more powerfully (Rank 5b). Drones that attack more frequently can be especially more useful when facing large groups since they'll be able to attack more enemies in less time. If you want to focus the drone's abilities on strict damage power (and range), then select Rank 5b. This will maximize the drone's damage output to 45 per blast. This may not sound like much, but when the blast also has the added ability to stun foes, it's more than sufficient in battle.

### Rank 6 Analysis

At the final rank, your defense drone can gain the ability to damage multiple targets per blast with a Chain Lightning upgrade (Rank 6b). If you want to use Tali as a Tech crowd-control expert, make this selection. With it, the defense drone will assault multiple enemies within a close proximity, up to 10 meters if you chose both damage and range upgrades (Ranks 4b and 5b). Rank 6a adds a 30 percent chance to knock down electrocuted enemies. This is also helpful in crowd-control. The longer an enemy is stunned or grounded, the less opportunities it will have to attack.

QUARIAN MACHINIST (UNIQUE)

Boost power recharge speed, shields/barriers, and health.

- 

**Rank 1—Health and Shield**  
Bonus: 10%; Power Recharge Speed Bonus: 20%
- 

**Rank 2—Durability and Recharge:**  
Increase health and shield bonuses by 10%; increase power recharge bonus by 20%
- 

**Rank 3—Durability and Recharge:**  
Increase health and shield bonuses by 10%; increase power recharge bonus by 20%
- 

**Rank 4a—Recharge Speed:**  
Increase recharge speed by 40%
- 

**Rank 4b—Health and Shields:**  
Increase health and shields bonuses by 20%
- 

**Rank 5a—Weapon Damage:**  
Increase weapon damage by 20%
- 

**Rank 5b—Tech Upgrade:** Increase Tech power damage and duration by 30%
- 

**Rank 6a—Squad Bonus:** Increase recharge speed of squadmate's tech powers by 10%
- 

**Rank 6b—Drone Specialist:** Increase recharge speed of drone powers by 50%

Ranks 1 through 3 Analysis

Quarian Machinist is a great Tech passive power capable of making Tali tougher defensively and offensively. At Ranks 1 through 3, she will have a health and shield increase of 30 percent and a power recharge speed bonus of 60 percent, making her tougher to damage and more dangerous when using powers.

Rank 4 Analysis

At Rank 4a, you can increase Tali's power recharge speed. This is especially useful if you want to make her an efficient power damage dealer or if you want her to use drones often while in battle. By selecting Rank 6a, you'll increase her power recharge speed to 100 percent, making it a difficult upgrade choice to pass up. Your other choice is to bolster her health and shields (Rank 6b). Select this option if you want to make her a tougher squadmate.

Rank 5 Analysis

Both Rank 5 upgrades will decide whether Tali will become a weapon specialist (Rank 5a) or will rely on Tech powers like drones (Rank 6b). If you plan on making Tali a drone specialist, select Rank 5b. This will make your drones extra effective in combat. Rank 6a, while useful when using shotguns, is a straightforward weapon damage upgrade.

Rank 6 Analysis

Base your decision for the final upgrade on whether you want Tali to rely on her drones primarily. The Drone Specialist upgrade (Rank 6b) will increase the recharge speed of your drone powers by 50 percent. So if you've upgraded both drone powers to at least Rank 2, then each power will recharge in less than 5 seconds. And since each drone power will last over 10 seconds, this makes for great potential drone usage on the battlefield. The alternative (Rank 6a) grants your squad a recharge speed increase to their Tech powers. Select this if you use crew members like EDI frequently.

BUILD OPTIONS

TECH CROWD CONTROL

- Energy Drain: 4b, 5a
- Sabotage: 4a, 6a
- Combat Drone: 5a, 6b
- Defense Drone: 4b, 5a, 6a
- Quarian Machinist: 6b

Many of Tali's powers are designed to stun, slow, or otherwise disrupt enemies. While this may not inflict as much damage on foes as fully maxed-out damage upgrades, it will allow the rest of your squad to execute important tactical maneuvers or overwhelm affected foes with attacks. Use powers like Energy Drain to weaken rivals, Sabotage to turn them into allies, and drones to stun or direct foes where you want them to go. Some enemies can even be distracted enough to give you their back, making them most vulnerable to attack.

DRONE/DAMAGE SPECIALIST

- Energy Drain: 4a, 5a, 6a
- Sabotage: 5a, 6a
- Combat Drone: 4b, 5b, 6a
- Defense Drone: 4b, 5b, 6b
- Quarian Machinist: 5a, 6b

If you want to make the most use out of Tali's two drone abilities, select Quarian Machinist's drone-specific upgrade, Drone Specialist. It will increase both drone powers' recharge speed, making them more easily deployable in battle. For Defense Drone, take every opportunity to increase its range and power, then select Chain Lightning. Combat Drone, however, will be Tali's go-to power. Give it both additional bonus powers—Detonate and Rockets—and Tali will be able to maximize drone damage in any situation.

ROMANCE

If a male Shepard romanced Tali in *Mass Effect 2*, he has the option to continue the relationship.

KEY CONVERSATIONS

Tali has a personal moment with Shepard upon first boarding the Normandy with the rest of the quarian delegation. In that conversation, Shepard can make it clear that he still has feelings for her. Doing so does not lock Shepard into a relationship (and is not required to continue the relationship), but it does lead to more intimate dialogue between Shepard and Tali during the mission on the geth Dreadnought, "Priority: Rannoch."

KEY MOMENT

Tali asks Shepard to call her up to the cabin sometime during the war against the geth. When Shepard does, she talks about her fears for her people, then asks Shepard whether he wants to continue the relationship, giving Shepard the chance to commit. This conversation is only available before Shepard goes down to Rannoch to destroy the Reaper base. If Shepard does not call her up to the cabin before then, he loses the chance to continue his relationship with her.

## OTHER CONVERSATIONS

During the geth campaign, Shepard can find Tali on the Citadel arguing with a turian diplomat. Take one side or the other to help settle the dispute. After the campaign is over, Shepard can find Tali working in a diplomatic capacity to coordinate the quarian fleet's efforts to help other races.

If you go to the Normandy lounge after completing the mission on Sanctuary, you will find a very drunk Tali either mourning Miranda or celebrating her victory over her father.

At other points after the geth campaign, Shepard can find Tali in Engineering, either talking over the radio to Garrus and other old friends or bantering with the Normandy engineers. While none of this is critical, it gives a nice small look into Tali's daily life.

## Spoiler Alert!

If you do engage her in a relationship, Tali has unique dialogue options during the final mission on Rannoch. After completing the missions on Rannoch, Shepard can talk to Tali in Engineering and she will give Shepard a token of her love: a picture of her with her mask off, which Shepard can look at in his cabin.

# FAMILIAR FACES

## ADMIRAL ANDERSON

Admiral David Edward Anderson is a career military officer in the Systems Alliance Navy. Born in London in 2137, he later moved to Arcturus Station and became the first graduate of the Alliance's now-renowned N7 marine program. Anderson is one of the Alliance's most decorated Special Forces operatives and served with honor during the First Contact War. He was the original captain of the SSV *Normandy* before relinquishing command to his XO, Commander Shepard.

After the Alliance victory in the Battle of the Citadel, Anderson was promoted to Admiral and chosen to advise Citadel Councilor Donnel Udina on military matters. Anderson later became embroiled in a Cerberus plot to abduct his friend Kahlee Sanders, but he foiled the abduction and returned to duty to prepare for the Reaper invasion.

## ROMANCE

Admiral Anderson is not a romance option for either male or female Shepard.

## ADMIRAL HACKETT

Admiral Steven Hackett is a decorated officer in the Systems Alliance, currently assigned to Arcturus Station on the far side of the Sol Relay. In the battle for the Citadel, Admiral Hackett commanded the Fifth Fleet. Following that victory, he was promoted to head of the Alliance military.

Hackett was born to a single mother in Buenos Aires in 2134. When his mother died in the pandemic of 2146, he was placed in the Advanced Training Academy for Juveniles, where his superior talents in science and leadership quickly became evident.

Hackett enlisted in 2152, volunteering for high-risk missions to colonize space beyond the Sol Relay. He was commissioned as a second lieutenant on Arcturus Station in 2156 and soon proved his ability in the First Contact War. His rare ascent from enlisted man to admiral remains an Alliance legend.

## ROMANCE

Admiral Hackett is not a romance option for either male or female Shepard.

## LIEUTENANT CORTEZ

Lieutenant Cortez, the Normandy's shuttle pilot, is a humble Alliance Officer. Having survived the attack on Earth, he's no stranger to loss. Even though he is dealing with the loss of his husband, Lieutenant Cortez still maintains a steady grip on the shuttle controls.

He's a skilled pilot, capable of getting Shepard and the squad into any and all missions and more heavily defended landing zones. While behind the shuttle controls, he's all business and able to maintain a level of professionalism befitting the Normandy's crew. Back on the ship, he can relax a bit and let people get to know a more personal side to him.

## ROMANCE

Cortez is a romance option for male Shepard. He is present for the entirety of the game but is strictly professional on missions. To form a more personal relationship, visit him in his station on the Normandy cargo deck.

## KEY CONVERSATIONS

In early conversations on the Normandy, Cortez shows that he's handling his professional duties well but is hurting emotionally. At one point, Shepard can suggest that Cortez should take some time off and go to the Citadel. Doing so enables his later content.

On the Citadel, Cortez is initially in the docking bay, watching ships go by. Later, Shepard can find him down in the refugee camp.

## KEY MOMENT

Once Shepard has encountered the first two Citadel moments with Cortez, Cortez e-mails Shepard and asks him to come to Purgatory. Shepard finds Cortez there, determined to celebrate and live life while he can. Shepard can choose to bring up the possibility of a relationship and commit to Cortez here.

**Spoiler Alert!**

During the final assault on Earth, Cortez's shuttle is shot down; if Shepard is romancing Cortez (or helped Cortez deal with his grief without a romance), Cortez's hope and will to live help him survive the crash and he has a final radio conversation with Shepard.

## DR. CHAKWAS

Dr. Karin Chakwas is a trauma surgeon and a major in the Alliance Navy. She served on the SSV *Normandy* under both Captain Anderson and Commander Shepard and was aboard the ship when it was destroyed by the Collectors. She later quit the Alliance in order to rejoin Shepard on the Cerberus-built Normandy SR-2. Along with most of the second Normandy's crew, Dr. Chakwas was kidnapped by the Collectors and taken beyond the Omega 4 relay, where Commander Shepard eventually rescued her.

After the Alliance impounded the Normandy SR-2, an inquiry found that Dr. Chakwas had "no significant role in or provable knowledge" of Cerberus's criminal activities. She has since rejoined the Alliance.

## ROMANCE

Dr. Chakwas is not a romance option for either male or female Shepard. However, you can have a night of drinks with her just before the final mission.

## JOKER

Flight Lieutenant Jeff "Joker" Moreau is a respected pilot with the Alliance Navy. Born and raised on Arcturus Station, he is widely considered to be the best helmsman in the Systems Alliance.

Moreau enlisted with the navy directly out of school and quickly gained the respect of his superiors. He served as pilot of both the Normandy SR-1 and its successor, the SR-2, and he was at their respective helms during the Battle of the Citadel and the assault on the Collectors.

Moreau suffers from Vrolik syndrome, a rare, debilitating disorder also known as brittle bone disease.

## ROMANCE

Joker is not a romance option for either male or female Shepard. He can, however, engage in a relationship with EDI if Shepard counsels both parties to do so.

## CONVERSATIONS

Joker will say something unique after every major mission in the game. If Shepard approaches but does not immediately initiate conversation, Joker may launch into a discussion with someone else (EDI, if she is

nearby, or someone else over the radio). He reacts to the arrival or death of former squadmates as well. To hear everything he has to say, make sure to talk to him after major missions (like the end of the genophage campaign, or the Citadel coup, or after the end of the Geth/Quarian War) or after major plot events (like EDI's introduction).

After Thessia, Joker will make an inappropriate comment that starts a more emotional scene. When the second dialogue choice comes up, choosing the Renegade option will shut Joker down until the end of the game, with Shepard telling Joker in no uncertain terms to stop his inappropriate comments.

On the Citadel, Joker is present on the Presidium Commons with EDI early in the game. After the Citadel coup, he can be found in Purgatory, watching people dance away their cares.

## MIRANDA LAWSON

Miranda Lawson is a high-ranking former Cerberus operative and a human biotic. Lawson headed Project Lazarus, the Cerberus operation that brought Commander Shepard back from the brink of death after the first Normandy was destroyed.

Lawson is an example of the achievements possible through genetic engineering. She was created in 2150 through manipulation of her father's DNA. Her entire physical and mental composition was deliberately engineered, including a longer life span and a superior immune system.

Lawson accompanied Commander Shepard on the maiden voyage of the Normandy SR-2 and was part of the crew responsible for the defeat of the Collectors. She has since left Cerberus. Her current whereabouts are unknown.

### ROMANCE

Miranda was a romance option for male Shepard in *Mass Effect 2*, and if Shepard romanced her, he has the option to continue the relationship. She cannot join Shepard's squad, however, so while committing to her does preclude other romances, this long distance relationship can be lonely and may not feel as rewarding as others.

#### ■ SPOILER ALERT! PREVIOUSLY IN MASS EFFECT

If you're playing *Mass Effect* for the first time, then it is assumed that Miranda survived the suicide mission during *Mass Effect 2*. She meets Shepard several times on the Citadel, and Shepard meets her again while investigating the Sanctuary facility on Horizon.

Players who import a *Mass Effect 2* game save where Miranda is not present will find that there is no full replacement for Miranda, in which case nobody talks to Shepard on the Citadel in her place. At Sanctuary, video messages that would have come from Miranda instead come from Oriana, Miranda's sister. The final confrontation between Shepard and Miranda's father does not have Miranda there to save her sister.

If Shepard commits to a relationship with Miranda and warns her about Kai Leng, it increases Miranda's chances of surviving the Horizon mission. If not, she dies in Shepard's arms.

## MORDIN SOLUS

Dr. Mordin Solus is a master geneticist and former operative for the salarian Special Tasks Group. Dr. Solus is well known for his work in perpetuating the genophage, a biological weapon that almost completely sterilized the krogan species. He eventually left the STG to open a clinic on Omega, where his combat skills kept the clinic safe and operational amid Omega's lawless society.

In 2185, Commander Shepard recruited Dr. Solus to research the Collectors and the Reapers. He was a member of the Normandy crew that traveled beyond the Omega 4 relay to attack the Collectors. He survived the mission, but his current whereabouts are unknown.

### ROMANCE

Mordin is not a romance option for either male or female Shepard.

#### ■ SPOILER ALERT! PREVIOUSLY IN MASS EFFECT

If you're playing *Mass Effect* for the first time, then it is assumed Mordin is alive, having joined Shepard during *Mass Effect 2* and survived the suicide mission. He escorts Eve to safety during the Sur'kesh mission, stays with Eve in the med bay on the Normandy, and escorts Eve to the Shroud tower on Tuchanka. He sacrifices himself to override the sabotage (unless stopped by Shepard).

Players who import a *Mass Effect 2* game save where Solus is dead will find that the salarian scientist Padok Wiks takes over most of Mordin's roles during the Genophage Campaign.

## JACOB TAYLOR

Jacob Taylor is a human biotic and was once a Cerberus operative working under Miranda Lawson. Born in 2157, he began his career as a Systems Alliance marine and served as a member of the Corsairs, an arms-length program for operatives working outside of Alliance jurisdiction. Taylor survived the geth attack on Eden Prime but left the Alliance afterward because of what he perceived as unresponsiveness in the face of aggression.

While working for Cerberus, Taylor thwarted a plot by batavian terrorists to unleash a bioweapon on the Citadel. Soon after, he was assigned to Project Lazarus, the Cerberus effort to reconstruct Commander Shepard and the Normandy stealth frigate. Following

the project's completion, Taylor accompanied Shepard through the Omega-4 relay to destroy the Collectors. He survived that mission and has since left Cerberus, although his current whereabouts and affiliations are unknown.

## ROMANCE

If female Shepard romanced Jacob Taylor in *Mass Effect 2*, she can talk about how their relationship ended but does not have the option to continue it. Jacob has moved on to someone else, although he remains friendly to Shepard and grateful for the time they had together.

### ■ SPOILER ALERT! PREVIOUSLY IN MASS EFFECT

If you're playing *Mass Effect* for the first time, then it is assumed that Jacob survived the suicide mission in *Mass Effect 2* and assists Shepard with rescuing Dr. Brynn Cole and her enclave of former Cerberus scientists trying to defect.

Players who import a *Mass Effect 2* game save where Jacob is not alive will find that, without Jacob's calm and steady influence, they must work harder to gain the trust of Dr. Cole.

## SPECIALIST TRAYNOR

Specialist Samantha Traynor is the Normandy's new communication officer. She's in charge of letting Commander Shepard know about key communications, be they radio transmissions she expertly picked up or Shepard's personal e-mail. At times, Specialist Traynor may even be able to let Shepard know the mood of specific crewmates, keying Shepard in to important conversations.

In her personal life she's a fun, playful character with a fondness for games and expensive dental hygienic equipment. Despite her quirkiness, or perhaps because of it, she's a great personality aboard the Normandy with many surprises.

## ROMANCE

Traynor is a romance option for female Shepard. She is present for the entirety of the game and never leaves her station near the galaxy map.

## KEY CONVERSATIONS

Traynor provides an early introduction to the Normandy and opens up the mission at Grissom Academy and the chance to rescue the Cerberus defectors. She also has personal talks in which she discusses the difference between working in a lab and working on a frontline warship.

If romancing Traynor, make sure to speak with her before the final mission. Unlike most other major romances, there is no option to speak with Traynor on Earth, and the talk on the Normandy is the last time Shepard sees her.

## KEY MOMENT

Once Shepard has had the ambient conversation about Traynor liking to play chess, Traynor will send an e-mail offering to come up to Shepard's cabin. She brings a chessboard and is prepared to play but makes an offhand comment about being jealous of Shepard's shower. If Shepard's intimacy is high enough, she can offer to let

Traynor use the shower. Traynor makes it clear that she's interested in a serious relationship, not just a fling, and Shepard can commit to the relationship by joining Traynor.

## COUNCILOR UDINA

Donnel Udina is the lone human on the Citadel Council. Although he has a keen ability for furthering his own political career, Udina has long promoted humanity's interests first and foremost in the galactic arena.

When humanity won a position on the Council for its part in defending the Citadel, the Alliance chose Udina for the position. He holds the office to this day.

Despite his unwavering focus on human interests, Councilor Udina is usually willing to collaborate with other species. Even his opponents concede that Udina gives fair consideration to nonhuman proposals, so long as humanity also benefits.

## ROMANCE

Councilor Udina is not a romance option for either male or female Shepard.

## NOTE

The following characters may or may not show up, depending on your imported save:

Jack  
Samara  
Thane  
Legion  
Wrex  
Wreav  
Grunt  
Padok Wiks

As we mentioned in the "Importing Saves" section in this chapter, the game takes into account your previous choices across *Mass Effect 1* and *2*. However, new players who do not import a save (starting a fresh game) should refer to the "Importing Saves" section to see what the "default" assumptions are of the world of *Mass Effect 3*. It is worthwhile to note, however, that these characters are mentioned in their respective sections of the single-player campaign to point out where they would appear otherwise.

A dramatic scene from a movie showing a giant mechanical claw descending over a city at night. The claw is dark and metallic, with blue lights glowing from its joints. It is positioned over a city with illuminated buildings and streets. The sky is dark and cloudy, with some light reflecting off the clouds. The word "CAMPAIGN" is overlaid in the center in a white, stylized font.

# CAMPAIGN

In 2157, humanity discovered that it was not alone in the universe. Thirty years later, they found a peaceful place among dozens of galactic species. But this idyllic future is overshadowed by a dark past: Reapers, a sentient race of machines responsible for cleansing the galaxy of all organic life every 50,000 years, are about to return. The leaders of the galaxy are paralyzed by indecision, unable to accept the legend of the Reapers as fact. But one soldier has seen the legend come to life.

And now the fate of the galaxy depends on Shepard.

## PROLOGUE: EARTH

In 2157, humanity discovered that it was not alone in the universe. Thirty years later, they found a peaceful place among dozens of galactic species. But this idyllic future is overshadowed by a dark past: Reapers, a sentient race of machines responsible for cleansing the galaxy of all organic life every 50,000 years, are about to return. The leaders of the galaxy are paralyzed by indecision, unable to accept the legend of the Reapers as fact. But one soldier has seen the legend come to life.

And now the fate of the galaxy depends on Shepard.

## MISSION BRIEFING

When the Reapers finally reveal themselves, they do so by launching an all-out attack on Earth and the Alliance planets. This first Prologue mission serves as a tutorial on the basics of movement, combat, and exploration.

The battle will rage across several different areas, from rooftops to the lower reaches of the once-idyllic city of Vancouver. Take time to get acquainted with the controls and adjust them to suit your needs.

Once you've reached the lower level of the city and engage the Reaper cannibals, try out your class-specific skills to see if they're right for you. It's still early in the game, so you can simply blast through the opposition; however, this Prologue mission is a great time to begin experimenting with different military classes.

The conversation trees don't yet affect long-term events or result in Paragon/Renegade consequences, so instead use these dialogue choices to set the tone for your game.

# FEAR THE REAPERS

It's been nearly six months since the events of *Mass Effect 2* concluded, and Commander Shepard has fallen out of grace with the Citadel Council and the Systems Alliance. During a time when there should be galactic peace, only Shepard and a few others are fully aware of the menacing threat that looms over nearly every planet in the Alliance.

## NOTE

For the sake of keeping this walkthrough concise and universal, the screens and events described have been taken from a playthrough using the following settings:

- » **Gender:** Male
- » **Appearance:** Default
- » **Military Class:** Soldier
- » **Reputation:** War Hero
- » **Origin:** Earthborn
- » **Combat Loss:** Ashley Williams

However, this guide was created using every military class and multiple combinations of settings, ranging from different **Combat Loss** profiles to varied difficulty settings.

When you take control of Shepard, quickly orient yourself and follow Admiral Anderson. The next section will usher you out of Alliance HQ and into the war-torn Vancouver cityscape. Keep up with the admiral as he leaps across the severed beams supporting the Alliance building. Almost immediately after starting to follow Admiral Anderson, a Reaper beam will fire at the building in front of you, forcing you to jump over a small gap.

Your goal is to reach the Spaceport and escape the Reaper attack. Follow the onscreen commands and stay close to the admiral. Shortly after climbing the ladder, hop atop the small structure and look right across the span connecting your building and the next to spot several husks. Take aim and open fire.

Pick off as many husks as you can, then drop down the ladder on the right, onto a small balcony. No sooner do your feet touch the ground than several more husks attack. Use well-timed melee attacks to put them down. A Reaper dreadnought in the distance attacks but narrowly misses, instead blowing open the building in front of you. Venture inside.

Enter the building through the blown-open wall and pick up the **Med Kit** on the ground near the burning debris; then approach the damaged door across from you. As you pry it open, a husk reaches through the gap and attacks. Give it a strong (charged) melee blow to knock it back, then open the door for Admiral Anderson.

Once the admiral is through, you hear a small thump nearby that catches your attention. Examine the vent in the room to discover a panicked young boy looking for refuge. The child is too scared to follow Shepard and escapes through the ventilation shaft in a direction that Shepard cannot follow, so move on and follow Anderson deeper into the burning debris of the Alliance HQ.

Pick up the ammo on the ground, reload your weapon, and follow the admiral out the window of the next building. Follow him down the exterior of the building to the area below. As you do, a Reaper ship destroys an Alliance dreadnought in the distance, and the resulting shock wave crumbles the structure you're on.

The tumble leaves you no worse for wear, so get up and immediately begin following Anderson again. He'll lead you across more debris, over fallen beams, and down to a team of fellow Alliance soldiers pinned by Reaper cannibals. Speak to the injured soldier, then quickly take cover behind the fallen beam on the left.

Wait for the cannibals to open fire. When they stop firing, pop out of cover and return fire. Take careful aim at their heads and pick them off one by one. The soldier explained that he and his group barely escaped the damaged gunship. The radio was left near the gunship, so you and Anderson volunteer to go retrieve it.

Follow Anderson across the makeshift bridge and turn left. Pick up the **Med Kit** on the right, then turn right to face several more cannibals. Take cover near the small debris wall and wait for the cannibals to pop out of cover before taking them down.

This is a great area to experiment with your class abilities. If you're an Infiltrator, try using your Tactical Cloak to shift from cover to cover until you can get the drop on them. Vanguard-class players can begin to experiment with the Biotic Charge ability.

This is also a great area to begin getting accustomed to close-quarters combat. Charge strong melee strikes and knock back the enemies before taking cover and finishing them off with class-specific powers or weapons fire.

## TIP

Since you're instantly pinned down by the cannibals, use the admiral during this enemy encounter. He's your only squad member at the moment, but he can easily be directed to key positions when you give the "Move" command. Direct him to your right or left, depending on where you are located, to maximize your and the admiral's range of fire.

With the admiral on your squad, you now have his **Power, Concussive Shot**, to work with as well. Experiment with it, using it to knock enemies away before attacking with weapons fire.

Once you've cleared the area, make a right, drop into the next area, and walk to the end to find both the radio and the **M-8 Avenger** assault rifle. Activate the radio to call for help.

The Normandy gets your distress call and comes to your rescue. Unfortunately, a group of cannibals arrives before your escape vessel, so take cover and hold your position until help arrives.

## ITEM REQUISITION

Pick up the **M-8 Avenger** before activating the radio. Activating the radio will trigger a cutscene and you won't be able to pick up the Avenger anymore, but you will automatically be equipped with it.

Several waves of cannibals will attack, but if you pick your shots carefully, you can hold them off. Keep the admiral behind cover to your right while you take the left. If you want to leave your cover and use class-specific abilities, do so only after whittling down the cannibal numbers.

The gap between you and the cannibals is wide, and the Reaper attackers won't leave their position to get too close to yours, so you have the advantage here.

Just as you run out of ammunition, the rescue ship arrives. Run to the nearby beacon for a pickup and escape to the Normandy. Before you go, however, Anderson reinstates you as an Alliance commander.

Welcome back.

## PROLOGUE—PRIORITY: MARS

Admiral Hackett ordered the Normandy to Mars to locate new Prothean data that could help defeat the Reapers, but the Archives on Mars are not responding. Investigate the dig site and find the Prothean data.

## MISSION BRIEFING

**Battlegrounds:** The surface of Mars can provide several interesting encounters. You'll have a wide array of tactical strategies at your disposal, ranging from long-range shoot-outs to duck-and-cover firefights.

Once inside the facility, however, you'll encounter several new enemies, from Assault Troopers to Guardians to Centurions. The long, narrow halls of the facility will force you to be creative using head-on tactics, while larger, multistoried areas will grant you a height advantage if you want to pick off your foes from a safe vantage point.

**Consequence Overview:** Before setting out on the mission, you'll have an encounter with James that allows you to make a Paragon decision, or, if you've chosen a Renegade dialogue choice, a Renegade "interrupt" will appear.

Also during this mission, either Kaidan or Ashley, depending on who you chose at the start of the game, begins to cautiously question your allegiance to the Alliance. If you want to recruit them for your squad long-term, begin convincing them now that you're no longer working with Cerberus and are 100 percent dedicated to the Alliance.

Halfway through the mission, you'll also engage Liara in a conversation that allows you to be either sweet and sympathetic or cold and curt. Depending on your dialogue choices, you can accrue more Paragon/Renegade points.

Finally, when you encounter an old shadow from your past, you'll have the opportunity to press him a bit more on his current motivations. Do so and you'll be presented with the chance for another Paragon/Renegade dialogue decision.

### Spoiler Alert Paragon/Renegade

Successfully persuading the Illusive Man in this conversation is critical to being able to successfully persuade him during your final conversation at the end of the game. If you don't persuade him here, you won't be able to fully persuade him at the end.

## FIRST CHANCE FOR HOPE

Immediately upon landing on the Martian surface, upgrade your abilities. You've acquired the first-level upgrade and now have the ability to beef up with five points for your powers. The choice of upgrades should reflect your ultimate preference in play style (see our recommendations in the "Squad" chapter page 48). However, regardless of what your initial class choice was, we recommend using the first-level upgrade on your class's specialty power, such as the Vanguard's Biotic Charge, the Infiltrator's Tactical Cloak, and so on.

The Martian surface is volatile, and a storm is rolling in from the distance as you land. Your time on this base will be limited. Once you've upgraded your skills, turn right as you exit the shuttle and walk toward the oncoming storm. Near the far end of the landing area, you'll find a ladder. Climb down to find the first few signs of what happened at the facility.

### ITEM REQUISITION

Shortly after descending the ladder, look on the ground to the right to locate the **M-92 Mantis**. You can use this sniper rifle immediately if you are specializing in long-distance combat. However, its increased weight might make it less desirable for Biotic-specific combat builds that require a faster power-recharge time.

## RESEARCH FACILITY APPROACH

After descending the ladder, turn left and send James and Ashley ahead of you. Order them to take cover behind the short walls before sneaking up and taking cover as well. As the path turns left toward the facility entrance, you spy several Cerberus Assault Troopers executing facility workers! If you equipped the Mantis, you can zoom in with the sniper scope and take out one, maybe even two, Cerberus operatives before the rest rush for cover. If you are using other weapons, remain behind cover and allow the Cerberus soldiers to rush toward your position.

Stay behind cover as they approach and allow them to get in range before popping out and firing. The Cerberus Assault Trooper is armored but susceptible to well-placed headshots or close-range shotgun blasts.

The area leading to the facility entrance is a short, narrow road with plenty of vehicles, crates, and small structures you can use for cover. After taking down the first wave of enemies, carefully lead your squad down the path past the large transport vehicle. When you reach the area with the convoy, immediately order your squad to cover and wait for the Cerberus forces to rush out. Watch for the Cerberus troops to take position, then begin picking them off.

### APPROACH 1: CLOSE QUARTERS

Players looking to get up close and personal can approach this area several ways. Vanguard's can use Biotic Charge to dash from enemy to enemy and knock them off balance, following up with a shotgun blast to the chest. Meanwhile, the rest of the squad can play cleanup, as they engage any soldiers you don't. If you're not a Vanguard, you can use your squad's abilities to split the enemy forces. Shift your squad left while you dash right, shifting from cover to cover, and get in close enough to decimate the enemy forces with your shotgun.

### APPROACH 2: SLOW AND STEADY

If close-quarters combat is too chaotic for your taste, you can also approach this battle from a more methodical standpoint. Use a medium-range assault rifle, activate Incendiary, Cryo, or Disrupter Ammo, and pick off your foes as they search for cover. James's frag grenades can also come in handy during this encounter, as he helps you flush out enemies from cover so you can pick them off from medium range. If you'd like something a bit more reliable than frag grenades, Adept-class players can use Singularity to flush out enemies from cover, then pick them off while they float helplessly over the ground.

#### TIP

**Talented Sniper classes such as Soldiers and Infiltrators can make short work of the enemies in this area. While Soldiers can slow down time to get headshots, Infiltrators can use the damage bonus from their Tactical Cloak to increase the lethality of their sniper rifle.**

Once you've cleared the entrance area, make a right and take the elevator into the facility.

## RESEARCH FACILITY INTERIOR

Upon entering the facility, you're immediately reacquainted with an old friend. Cerberus troops give chase to Liara, but she deftly evades them and turns the tables on her pursuers. Once she's dispatched her Cerberus hunters, she informs you of her recent exploits. She's after the same information that you are: plans for a Prothean device believed to be capable of stopping the Reapers.

The Archives holding the information, however, are across a long tramway. If Cerberus hasn't locked down the area, you should be able to access the Archives and acquire the plans for the Prothean device. Before you set out toward the Archives, a group of Cerberus Assault Troopers ambushes you. Shepard sends James back to get your escape shuttle ready while Liara takes his place on your squad.

With Liara on your squad, you can now use her Singularity ability. No matter what class you've selected, Singularity is one of the most useful powers available to your squad. Order Liara to use Singularity on the Cerberus soldiers on the deck above you, then pick them off with a weapon of your choice.

If any soldiers are still standing when Singularity wears off, stay behind cover and continue to pick them off. Take down the small squad of Cerberus soldiers, then find a way onto the catwalks above.

### TIP

Since Singularity also amplifies Biotic abilities, Adept-class players can combine their powers with Singularity to create some explosive combinations. Now is as good a time as any to try some out.

### ITEM REQUISITION

Before you climb up to the catwalks, walk over to the **Med Kit** near the parked shuttle. Pick it up to gain 100 Experience or one Medi-Gel and 50 Experience.

Don't bother trying the elevator in this docking area. It doesn't work. Instead, walk over to the vehicle lift controls and activate them. They'll lift a nearby platform on the left, allowing you to jump onto the platform and reach the catwalk area overhead.

Follow the walkway to a closed door and open it. A small complement of Cerberus are stationed in this room, but they don't see you enter, so you have the element of surprise.

Quickly take cover and slide to the right so you're positioned directly behind an Assault Trooper. Once you're within striking range, follow the onscreen commands to execute a quick kill from cover. This will eliminate one of the soldiers immediately but will alert the rest.

With the hornet's nest stirred, you're free to rush out of cover and quickly put down the rest of the enemies in the room.

#### TIP

This room is very small, and there aren't many enemies to contend with, so be smart. Vanguard- and Infiltrator-class players can have a great time clearing it. Either charge from enemy to enemy as a Vanguard, or use your Tactical Cloak to sneak up on foes while they're engaged with your squadmates as an Infiltrator. Similarly, Adept-class players can combine their powers to create great, destructive combinations in close-quarters combat.

Exit this room via the door in the far corner and enter a larger room that resembles a waiting area.

#### ITEM REQUISITION

Before activating the security console in this area, pick up the **Datapad** resting on one of the seats in the waiting area. There is also a **Med Kit**, **Ariake Technologies Gauntlets**, and the **M-4 Shuriken SMG** in the security room. Pick them all up. The Shuriken may also be equipped instantly. Though not extravagantly powerful, the SMG can shred through enemies in the hands of skilled Soldiers.

Activate the security console in the small room to unlock access to the roof leading to the pedway. As you do, you spy a mysterious woman running around the facility. Exit through the now-open door to the exterior airlock.

Exit the hatch and venture out into the facility's exterior. The storm is nearing, and the tramway has been activated. Someone from the Cerberus team is en route to the Archives ahead of you. Drop down the ladder on the left and make a sharp left down the long walkway.

#### ITEM REQUISITION

The long walkway leads to a ladder, but just to the left is a small crate with an item box on it. Open it to acquire the **Kassa Fabrication Chestplate**.

Go up the ladder at the walkway's far end, then hop across the small gap toward the open hatch leading back into the research facility.

When you reach the bottom of the stairs, you can see several more Cerberus Assault Troopers on the other side of a window. The

window can be shattered easily, so either get a jump on the Cerberus using weapons fire or Biotics, or wait for half of the Troopers to leave once they've finished their conversation. Singularity and Biotic Charge work really well here and maintain the element of surprise nicely. By the time the enemies realize they're under attack, they're either floating in the air helplessly or have been flung across the room.

# ITEM REQUISITION

Shortly after reentering the facility, you'll find a **Datapad** on the walkway before going down the stairs into the

darkened room. You can pick it up now or shortly after the battle with the Assault Troopers on the other side of the glass. There is also an **SMG Scope** sitting on the tray counter in the cafeteria. Pick it up after you clear out the enemies. Once the area on the other side of the glass is clear, examine the **Medical Station** on the far right to get a Medi-Gel or experience.

Climb over the small partition into the next room, where the Assault Troopers were, then activate the environmental controls in the small room to the right. This repressurizes the room, and all of the lights come back on. A small security recording also reveals what happened in the facility prior to your arrival.

Liara opens the door leading out of this area and toward the core transportation section. Exit through the newly unlocked door on the room's far side.

## TIP

You can speak with Liara after she opens the door.

# ITEM REQUISITION

As soon as you enter the next room, look in the rubble directly ahead to find the **SMG Ultralight Materials I**. If you're using

the M-4 Shuriken you found earlier, now is a great time to use the nearby weapon bench to modify your SMG. This will decrease your SMG's weight and increase your power recharge time—especially useful if you're relying heavily on Biotic powers. There is also a **Datapad** on the ground, just left of the stairs.

## TIP

Even if you're not using the **SMG**, try using the weapon bench nearby to apply your two new mods (**SMG Scope 1** and **SMG Ultralight Materials I**) to see how they work. Once applied, the weapon will automatically upgrade when new levels for mods are located. So if you upgrade your **SMG** to **SMG Ultralight Materials I**, they will automatically upgrade to **SMG Ultralight Materials II** as soon as you acquire the higher-level mod.

Go up the stairs on the right and open the door. At the walkway's far end are several Cerberus Assault Troopers.

## APPROACH 1: BAIT AND SNIPE

One method for decimating the soldiers in this section is to keep your distance and pick them off using your sniper rifle. The area between you and the Cerberus soldiers is sectioned off into smaller hallway compartments, each with its own open hatch. These areas provide plenty of cover that grant you a great view down the long hallway.

While you stay behind at a distance, use your "go to" command to direct your squad down the hall closer to the enemy squad. As they draw the enemy fire, you can use your sniper rifle to pick them off when they pop out of cover to fire at your comrades.

When the Guardians rush out from down the hall, zero in through the small gap in their shield to get headshots with every shot. If you miss, the impact of your bullet will knock them off balance enough for your squad to fire on them while they're exposed.

## APPROACH 2: RUSH AND ATTACK (VANGUARD)

For Vanguard, an alternate approach would be to use Biotic Charge as soon as you see the enemies and catch them by surprise. You'll knock one down and eliminate him, while the others scramble for cover. The speed with which you close the gap will be too much for them.

Immediately open fire on the nearest foe while your powers recharge. When they do, use Biotic Charge again to take out another nearby foe.

When the Guardians show up, use Liara's Singularity to separate them from their shields. They'll float helplessly in the air, enveloped by a Biotic barrier. When they do, use Charge on the floating enemies to detonate them in midair.

### ITEM REQUISITION

In the second-to-last hallway section, the one with the bright white light, there is a small station with a sink. Look on the floor just behind the sink to find a **Datapad**.

Make a sharp left at the hall's far end and quickly take cover against a wall on either side of the hall. The next few sections of hallway are very similar to the first (prior to the sharp left turn). However, each small section in this long hall also splits up into two sections, allowing you to venture down the main hall or slip through a small path on the left side of each section.

Depending on your class of choice, you can either take the fight into the hall or hang back while the Cerberus forces shift from cover to cover.

## APPROACH 1: SNIPE AND MOVE

Once the first section is clear, rush in behind your advancing squad, switch to a weapon with slightly better medium kill range, and pick another spot for cover. Continue moving down the hall this way until you've driven the Cerberus soldiers all the way back.

Soldiers and other weapon-proficient classes can use these long, narrow halls to their advantage by switching to a sniper rifle and picking off enemies from afar. The Centurion enemies may make things a bit more difficult by filling the room with smoke and obstructing your view, but you can easily overcome this by using your squadmates to flush them out.

If you stay far enough behind the front lines of fire, you can wait for the smoke to dissipate a bit, then pick your shots. Soldier-class players can use Adrenaline to slow time once the smoke is gone and get multiple shots between enemies. If you wait too long, the halls will fill with smoke again before you can take another shot.

## APPROACH 2: SLIP IN THROUGH THE SIDE DOOR

This approach is especially effective because it forces your enemies to split their attention. Begin by taking cover at the entrance to the first hall section, then direct your squadmates to go into the hall ahead of you and take cover behind the small crates on the hall's right side.

As soon as they've engaged the enemy, rush in behind them and sprint down the stairs on the hall's left side. This side runs all the way up the hall, bypassing a lot of firefight between you and the Cerberus soldiers. When you safely reach the hall's far end, you can engage the enemies from behind or flank them if they're nearby.

Use a weapon with good close-range damage or combine your squad's powers with melee combat to take out foes quickly.

Adept-class players can also make good use of the side hall. Rather than engage enemies at the hall's far end with traditional weapons fire, use powers like Pull or Singularity to weaken the Cerberus forces for your squad to finish them off.

### CAUTION

Don't rush in if there is a lot of smoke still filling the hall. Cerberus Guardians and Assault Troopers are great melee combatants capable of lowering your shields with one well-placed melee blow. Once your shields are down, the rest of the enemies in the hall can shred through your health with ease.

When you reach the hall's far end, turn left to find room sterilizer controls for the next room. Wait for the beams to sweep away from the center of the room and hit the controls when the beams are at their widest. Once they've stopped, go into the room.

### TIP

Watch the beams carefully, they alternate between blocking the door and allowing you access to the door on its widest sweep. In order to continue, you must time the deactivation right so that its widest sweep doesn't block the door.

### ITEM REQUISITION

The room with the sterilizing sweep has several useful items in it. As soon as you enter, you can pick up a **Shotgun High Caliber Barrel I** mod. You can also find a **Med-Kit** and a **Datapad** nearby. To get the **Sniper Rifle Extended Barrel I**, be sure to stop the sweeping beams at their absolute widest, past the pickup, on the room's right side. If you stop the beams too soon, you won't be able to pick it up because the beam will be in your way.

However, if you're using a class that doesn't start off with a shotgun, you'll find an **M-23 Katana** located here next to the dead Cerberus trooper. This goes for every weapon in the level—if your chosen class already has that weapon, it will not appear as a pick-up item in the level.

Exit through the door on the far right side and follow the hall to a locked door. Open it to find a mounted cannon at the hall's far end. Take cover when it opens fire and follow the onscreen commands to shift from cover to cover down the hall. When you reach the far end, rush into the walkway and take cover behind the boxes in front of you.

Move left, rolling from cover to cover, and go around the walkway until you flank the wall-mounted machine gun. Once you've reached its left side, it can no longer target you, so it stops firing. Unfortunately, this leaves the security room full of Cerberus troops for you to contend with.

Leave your cover and open the door into their security room. They'll immediately open fire, so take cover behind the wall while your squad moves into position. Peek out of cover and take out the Trooper closest to you. Order Liara to use Singularity near the center of the room to create a bottleneck in case the enemies attempt to advance. Once you've thinned their numbers, rush in and finish them off.

#### ITEM REQUISITION

Before activating the security console, pick up the **Datapad**, **Med-Kit**, and **Sniper Rifle Concentration Module I** in the room.

Activate the console in the room to trigger a security video of the Archives. The video feed shows the mysterious woman from earlier, now known to be Dr. Eva. Clearly a member of Cerberus, the doctor orders her troops around while you remain locked out of the Archives. A bit of quick thinking on the part of your squad, however, fixes that as you fool the Cerberus troops to send you a tram.

Before the tram arrives, you have enough time to formulate a plan of attack and set up an ambush on the incoming Cerberus forces.

#### TIP

You get an opportunity to speak with either Kaidan or Ashley after he or she coerces Cerberus to send a tram. This is one of your first opportunities to get them on your side.

#### APPROACH 1: FLANK

The easiest way to ambush the troops is to order one squadmate to the left side of the warehouse and another to the right. You can either take position with one of your squadmates or entrench yourself near the top of the stairs at the center of the room. While your squadmates flank the enemy forces from both sides, you can open fire from directly ahead of them, creating a 180-degree wall of fire.

As the Cerberus troops rush out of the tram, they're instantly mowed down by your coordinated, triangulated fire.

#### APPROACH 2: HEAD-ON

If you prefer a more direct approach, order your entire squad to the lower level where they can take cover behind many of the crates directly in front of the warehouse entrance. While this may not be the most dynamic way to ambush the enemy, it does provide you a direct way to engage them without any obstacles in the way.

Also, by bringing the fight to them on the lower level, you have a better line of sight to your squad so you can direct their movements easier. Combine powers here to maximize your damage output and keep a steady stream of fire on them.

#### APPROACH 3: DEATH FROM ABOVE

Perhaps the safest way to engage the enemy is to maintain the higher ground. Switch to a sniper rifle and use your team's powers to weaken the Cerberus soldiers as they approach. While the enemy rushes out, your squad can slow them down, allowing you to pick them off from the top level.

Squadmates must start on the lower level, to the left of the tram door. The tram will not come unless both squadmates are on the left.

After you dispatch the soldiers, get on the tram and use the cable-car controls to get moving. When Cerberus's attempt to stop your cable car fails, they send another tram to finish you off. Open fire on the soldiers as they approach on the tram, and use Singularity to lift them up while the tram continues to move.

Fire on the floating foes and use other powers to take them out. If any remain when it pulls up next to you, hop into their cable car and use charged melee blows to finish them off. Use the controls on the new cable car to finish your trek to the Archives.

## ARCHIVE DOCKING STATION

The Archive docking station is swarming with Cerberus troops. Leave your squad in the cable car while you take cover in one of the depressions in the docking area. Your enemies will have a slight height advantage, but you'll have good cover and enough clear line of sight to open fire on them from your lower position.

Shift left and right in the depression, using a combination of weapons fire and powers to take down each Cerberus soldier in the room. If they pop smoke, order your squad out of their position and closer to you. When enemies emerge from the smoke, focus your fire and powers on that foe to make short work of him.

The second wave of enemies takes a bit more effort to take down. The combination of Guardians and Centurions makes things a bit more difficult with minimal cover. If you stay in the depression, the Guardians will slowly advance and make life difficult. Rely a bit more on your powers during this wave to either pull away their shields or knock them off balance. Once the Guardians are exposed, they're not much more difficult to defeat than Assault Troopers or Centurions.

Clear this room of the second wave to gain access to the Archives.

### TIP

**Vanguards and Infiltrators** can move around the area freely using **Biotic Charge** and **Tactical Cloak**, respectively. Rather than hang back and take cover, both classes can roll their sleeves up and get up close and personal with the enemies in the room. **Soldiers** can use **Adrenaline** to slow down their advance while rushing them for melee blows from behind.

### ITEM REQUISITION

With the room clear, examine the small security room near the area's center to find a **Medical Station**. Also, in the far left and right are two pickups, an **M-15 Vindicator Assault Rifle** and the **Shotgun Shredder Mod**. Grab everything before exiting through the rear door.

## ARCHIVES

Go through the door at the back of the room to enter the Archives. Inside you find that someone has beaten you there. Not only is the information from the Archives being erased, but you're also greeted by an old "friend."

If you want to trigger an opportunity to make a Paragon/Renegade decision, select the "You're wasting time!" dialogue option. This opens up a slightly different decision tree where you can either attempt to recruit the Illusive Man or blow him off.

Once this conversation concludes, the Virmire Survivor encounters Dr. Eva as she attempts to download the Archive information. She escapes, so give chase!

During this chase sequence, your only priority is to keep up. You can't stop her or catch her, so don't bother shooting at her or attempting to melee her if you get close enough. Simply keep up so she's always in your field of vision until she reaches the end of the line.

She'll board an escape shuttle, but James has other plans. He rams her shuttle, creating a huge explosion and slowing her down.

Eventually she emerges from the wreckage, revealing herself as not human at all. No matter who you chose to be your third companion in the beginning of the game (Kaiden or Ashley), Dr. Eva grabs them and nearly crushes their skull. Open fire on her head when she charges at you.

With your third squadmate on the brink of death, the Mars Archives almost entirely erased, and the Reapers arriving on the small red planet, you leave the Martian surface with Dr. Eva's body in hopes of recovering the Prothean data and conclude this mission.

## PROLOGUE-PRIORITY: CITADEL

The Council must be informed of the Reaper threat and the Prothean device that may be able to stop the Reapers. Go to Councilor Udina's office on the Citadel and convince the Council to send help for the fight against the Reapers.

## MISSION BRIEFING

**Battlegrounds:** The majority of this next mission takes place on the Citadel, so there will be no combat scenarios. However, you should still explore the Citadel and get acquainted with the place. You'll most likely come back to the Citadel frequently throughout your adventure.

**Consequence Overview:** This entire mission consists of speaking with people, so you'll have plenty of opportunities to increase your Renegade/Paragon rating and develop relationships with several old and new faces.

Depending on your leaning, you may also acquire two war assets to help in your Galaxy at War rating by speaking with Diana Allers and Khalisah al-Jilani.

### ITEMS REQUISITION RUNDOWN

Medi-Gel Capacity  
TM88—Peruvian Whiskey

#### NOTE

There are many items to purchase in the hospital as gifts and these vary depending on whether Ashley or Kaidan was injured.

#### TIP

Use the area map upon first arriving and getting control in the Citadel (labeled map on pages 356-357).

## TO THE CITADEL

Immediately after your escape from the Mars research facility, you're contacted by Admiral Hackett. The information you managed to obtain yielded impressive results. Most notably, the information revealed plans for a Prothean device that seems to be capable of massive amounts of damage.

However, with little else to go on, your initial mission remains: reach the Citadel and speak with the Council to enlist the help of the other Citadel Space planets.

You have nowhere else to go at the moment, and there is the matter of your third squad member's current critical condition after his or her encounter with the Cerberus synthetic.

### NOTE

You have no choice but to go to the Citadel immediately following "Priority: Mars." The ending cutscene finishes with you arriving at the Citadel ready to meet with the Council. You don't have to go directly to the Council, of course, but to progress the game and story, you must speak with them regarding the Reaper invasion of Earth.

Upon landing at the Citadel, you're greeted by a familiar friend. Captain Bailey of C-Sec has been recently promoted to commander and is happy to see you back on the Citadel. Commander Bailey suggests you stop by the Huerta Memorial Hospital to check on the condition of your injured comrade.

### TIP

If you agree to go to the hospital when Commander Bailey suggests it, you'll accrue Paragon points. However, if you choose to get straight to business and instead go to meet with Councilor Udina, then you'll forgo any Paragon points, even if you change your mind and go to the hospital first. What matters is what you tell Commander Bailey at this point.

If you'd like to keep the critical path moving, jump to the "A Favor for a Favor" (page 131) header and continue from there. If you'd like to explore the Citadel first, continue reading.

## HUERTA MEMORIAL HOSPITAL

### RECRUIT A DOCTOR

Upon arriving at the hospital, you run into two doctors: Dr. Michel and Dr. Chakwas. Regardless of who you speak with first, your conversation is directed to Dr. Chakwas. Here you have a critical decision to make. You can either recruit Dr. Chakwas for the Normandy or, despite her pleading, ask her to stay at the Citadel and aid in the efforts.

If you choose to recruit her, she'll go to the Normandy and you'll gain a few points of Reputation and the aid of an old trusted friend on the Normandy.

However, if you choose to recruit Dr. Michel, you'll gain Reputation points for asking Dr. Chakwas to remain behind (you must do this first before recruiting Dr. Michel); you'll also trigger a Paragon/Renegade decision and gain a few bonus Reputation points for recruiting Dr. Michel to join you.

Better yet, by asking Dr. Chakwas to remain behind, you'll acquire a new war asset for your Galaxy at War rating.

### VISIT YOUR INJURED SQUAD MEMBER

Once you've recruited a doctor, visit your squad member's room to give him or her some words of encouragement. Neither Ashley nor Kaidan will respond, as their injuries are pretty severe, but you'll get a dialogue choice that can result in positive Reputation point gains.

Give your fallen member a pep talk (or a commander's cold, hard speech), then exit the room. Now that you've visited your squad member and recruited a doctor, you can return to the Citadel Embassies.

#### ITEM REQUISITION

On the way out of the hospital, stop by the Sirta Supplies kiosk and purchase the **Medi-Gel Capacity** upgrade for

3,000 credits. It's still early in your adventure, and you'll need to carry plenty of Medi-Gel (especially in higher difficulty settings) to keep your squadmates alive.

If you'd like to pick up the **TM88-Peruvian Whiskey**, you might as well do that too. After all, it's only 1,000 credits.

#### TIP

If the injured squad member is Ashley, there will be a range of gifts available, from candy to books of poetry. However, you may only purchase a single gift. After purchasing one, the other choices are no longer available. The correct gift for her is the **Collected Alfred Tennyson**.

## PREVIOUSLY IN MASS EFFECT

Ashley's correct gift is a reference to her relationship dialogs in *Mass Effect 1*.

## NOTE

The Peruvian Whiskey is only available if Kaidan is the injured squad member. In this case, this will count as the correct gift for Kaidan. He will not take the gift from you at this time and should you choose to wait, it will still be available for purchase if you come back to see him again. At some point you will be able to have a conversation and give a gift to your injured squadmate. A correct gift for either Ashley or Kaidan will earn you points in the relationship. An incorrect gift for Ashley will gain you no benefit.

## CITADEL EMBASSY

### QUEST PICKUP-SHRIKE ABYSSAL: PROTHEAN OBELISK

At any point during your visit to the Citadel, walk up to the trio (turian, human, and volus) in the far left corner of the Embassies. You'll overhear the volus diplomat speaking about a Prothean Obelisk and you'll pick up a new mission in the Shrike Abyssal.

For information on how to complete this quest, go to the "Hub Mission" chapter and search for the "Shrike Abyssal: Prothean Obelisk" mission (page 359).

### VISIT COMMANDER BAILEY

Prior to speaking with the Council, stop by Commander Bailey's office to speak with him for a bit. When you arrive, you interrupt a conversation between him and Alliance News Network reporter Khalisah al-Jilani. Bailey doesn't have the brightest outlook on things, but this conversation can serve two purposes: (1) You can gain Paragon/Renegade points, depending on how sternly you steer the conversation, and (2) you'll possibly trigger a conversation with Khalisah later.

### SPEAK TO KHALISAH AL-JILANI

After speaking with Commander Bailey for the first time, exit his office and approach the elevator. There, next to Avina, the Citadel VI (virtual intelligence), you'll find Khalisah. She's eager for an interview, so stop and speak with her.

Early into the conversation, you'll be given the chance to trigger a Renegade interrupt (two, actually, if you take the first). However, if you ignore this choice, you can later take a Paragon decision. If you do, you'll acquire Khalisah as a war asset as well.

## A FAVOR FOR A FAVOR

After Commander Bailey greets you at the Citadel entrance, you can go to Councilor Udina's office to speak about the current situation on Earth. There you're met by Udina and the rest of the Council. Though they're sympathetic to your pleas to help Earth, their planets are under Reaper threat as well.

Even though it feels like a defeat, the turian Ambassador does extend an offer. The turian Primarch is currently stuck on Palaven, as he didn't get out in time.

If you can rescue the Primarch, he's just the type of man who will help defend Earth long enough for the Prothean weapon to be completed. A favor for a favor.

Your next stop is on Palaven's moon, Menae. However, even though they can't help you right away, the Council does reinstate you as a Spectre, granting you use of the Spectre Console and Spectre Requisitions consoles in the room next to Commander Bailey's. Depending on how you steer the conversation with the Council, you can gain either Paragon or Renegade points. Keep the conversation positive and supportive and you'll gain Paragon points. If you're stubborn, angry, and uncooperative, you'll get Renegade points.

### PREVIOUSLY IN MASS EFFECT

If you were already reinstated as a Spectre during *Mass Effect 2*, then the Council simply upholds your Spectre status during this conversation.

### TIP

Take a minute to check out the Spectre room where you can poke around the Spectre consoles and visit the shooting range. You can also use the weapon bench to modify your current weapons and try them out on the three moving targets nearby.

### SPEAK WITH COUNCILOR UDINA

After speaking to the Council, you can speak with Councilor Udina again to get a better read on his situation. Use the "Investigate" dialogue option to learn more about him and what has happened in the last few months.

## NORMANDY DOCK: BAY D24

### SPEAK WITH DIANA ALLERS

Once you've spoken to the Council and Councilor Udina, you're free to go down to the docking bay. There you'll find Alliance News Network correspondent Diana Allers. Speak with her briefly, then allow her to join you on the Normandy as a war asset.

## CITADEL EMBASSY

### SPEAK WITH JAMES

Before departing the Citadel on your next mission, return to the Embassies to find James staring out of the window just left of the elevator. Speak with him to get his view on things. You won't get any Paragon or Renegade points, but you'll accrue a few Reputation points for speaking with him. Once you've done so, you can leave the Citadel.

## DREAM SEQUENCE 1

After returning to the Normandy, you have a rough night of sleep. Your dreams are dominated by haunting visions of the little boy left behind on Earth as the Reapers attacked.

Even though you have control of this sequence, you don't have to do much. Simply follow the child as he runs from place to place until the dream ends.

## WELCOME BACK TO THE NORMANDY

The following morning, you meet Liara and your new Comms Specialist, Samantha Traynor. Traynor gives you a quick rundown of the new Normandy ship, including all of its critical systems, and leaves you to speak to Admiral Hackett over vid-com.

Every dialogue choice between Liara and Hackett culminates in a Paragon/Renegade point calculation, so keep this in mind as you respond to their comments and questions.

## ACT 1—PRIORITY: PALAVEN

The Citadel Council has called a war summit that presents an opportunity for the Alliance to request help building the Crucible. Unfortunately, Primarch Fedorian is caught in the Reaper attack on Palaven. Rescue the turian Primarch from Palaven's moon.

www.primagames.com

## MISSION BRIEFING

**Battlegrounds:** The majority of this mission takes place on the surface of Menae, Palaven's moon. The surface of Menae is nothing more than jagged rock. The turian forces have been spread thin across the moon, forcing them to set up makeshift command stations wherever they can.

The wide-open areas of the moon's surface allow all military classes to do well here. Everyone from the Sentinel to the Engineer can find creative ways to complete this mission with minimal fuss.

The toughest mission segment will be dispatching two Brutes at once, while fending off Marauders and Cannibals. Use the wide-open area to your advantage and sprint away if you need to create some distance from the enemies.

**Consequence Overview:** Nearly all integral conversation during this mission results in Paragon/Renegade points. Most importantly, however, are the conversations you have before the mission on the Normandy. Take this time to begin developing relationships and even inviting key members of the crew up to your quarters for conversations.

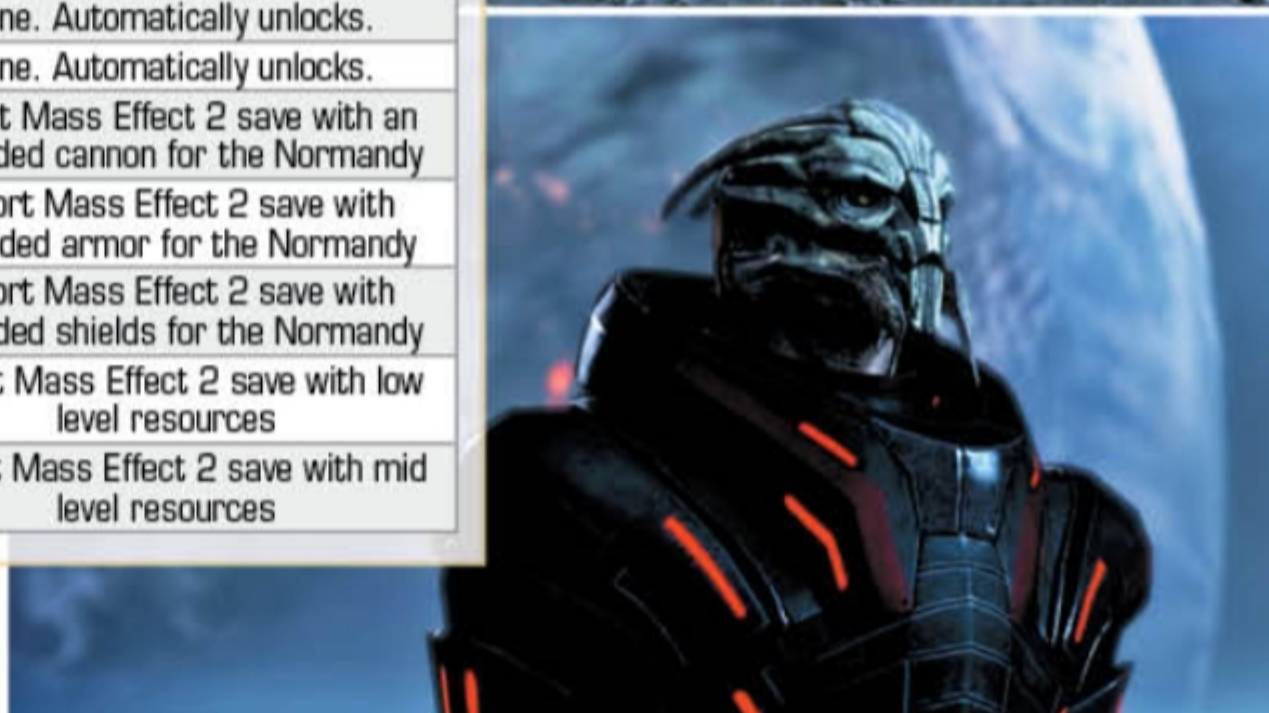

During the mission, you'll interact with several high-ranking turian figures. Your conversations with them will carry weight, so keep your responses in line with your desired outcome. If you want to lean toward Paragon, then keep the conversations positive and cooperative. Renegade players should get straight to the point and leave all tact out on the battlefield.

## WAR PREPARATIONS

Prior to leaving on your mission, take some time aboard the Normandy to prepare for battle. You can interact with other members of your crew, purchase upgrades, learn about new missions, and even begin developing relationships. The following suggestions are completely optional but highly recommended if you want to get the most out of your adventure.

If you'd like to get straight to the next mission, skip to the "Rescue the Turian Primarch" (page 139) section later in the guide.

### PRIVATE TERMINAL

Stop by your private terminal to read some e-mail. Everyone from Liara to Admiral Hackett will send you messages here that can trigger private conversation opportunities (where you can develop relationships) and briefings on new missions.

At the moment, Liara has something she'd like to talk to you about. There are also other e-mails available. Check them out.

### SPEAK WITH SPECIALIST TRAYNOR

If you want to start developing a relationship with Specialist Traynor, now is a good time to get started. Speak with her about her background, show interest in her past, and keep the conversation friendly and casual, as opposed to speaking to her like her commanding officer.

### SPEAK WITH ENGINEER ADAMS

Go down to Engineering and speak with an old familiar face. Engineer Adams is back aboard the Normandy and more than willing to catch up and share his thoughts on the current ship design. More importantly, he's not shy about sharing his thoughts on your dealings with Cerberus.

Try keeping the conversation friendly and understanding. If you understand his point of view on the Cerberus events, you'll gain Reputation points.

## ITEM REQUISITION

While you're down in Engineering, take a minute to explore the lower level, just below where Engineer Adams

is stationed. There, you'll find an item to pick up. Look on the table nearby to find a **Sovereign Model Ship** to display in your private quarters.

Also in Engineering, in the starboard cargo hold, is another model ship—a **Turian Cruiser**. Grab it before leaving the Engineering deck.

To find the **Destiny Ascension Model**, visit Life Support on the crew deck. Finally, pick up the **Normandy**

**SR-1** from the shuttle bay, just right of where James is working out.

## SPEAK WITH LIARA

Head to the crew deck to speak with Liara. In her office you'll find a quirky VI, Glyph, manning the intel terminal. When you're done speaking with Glyph, turn to Liara and speak with her.

Liara's office on the Normandy also has the Shadow Terminal where you can access Shadow Broker information. Since she's currently the Shadow Broker, Liara has access to a wealth of information that can help you along your adventure.

You can also call Liara to your private quarters to begin developing a relationship. She'll share with you a project she's working on and asks for your advice. If you want to encourage romantic feelings, allow her to decide how you are depicted in her project.

## SPEAK WITH THE NORMANDY'S DOCTOR

Stop by the medical office on the crew deck to speak with your doctor. The Normandy's doctor has essentially the same interactions available whether you chose Dr. Chakwas or Dr. Michel, so take a minute to speak with the doctor to get a checkup.

The doctor will give you a basic update on how you've progressed so far. If you've leaned toward Paragon, then she'll mention that your scars will continue to heal as long as you stay positive. However, she'll advise you to lighten up and not be so serious if you've been answering options with Renegade responses. Either way, you'll gain Reputation points.

### TIP

If you'd like to acquire a new power or reassign your current ones, this is where you'll need to go. There are two beds in the medical office, one for acquiring new powers and another to respec your class. Keep this in mind but don't change anything just yet. It's far too early in your adventure to change things up, and your current powers aren't nearly developed enough to give you a picture of how your class will play out three or four missions from now. Since both power reassignment and new power acquisitions will come at a cost, it's best to save your credits until you absolutely must make a change.

### NOTE

The Cerberus synthetic is still in the AI Core. You can visit her if you want, but you can't do much else with her at the moment.

## SPEAK WITH LIEUTENANT CORTEZ

Down in the shuttle bay is Lieutenant Steve Cortez. He's in charge of the requisition consoles in the shuttle bay. Stop by for a minute and speak with him to learn more about how the supply consoles work.

You can also speak with him about his background and his feelings toward current events. If you want to begin developing a relationship with him, ask him about his personal life.

Steve also has the distinction of being the Normandy's shuttle pilot. If you keep things friendly with the lieutenant, you can also accrue some Paragon points.

## SPEAK WITH JAMES

Also in the shuttle bay is James Vega. He likes to keep a low profile in the lower deck of the ship. This is also the best place for him to work out constantly without any interruptions. Approach and engage him in a conversation.

When he asks you to continue the conversation while you "dance" (spar), take him up on his offer. This sparring session will allow you to gain either some Paragon or Renegade points, but you'll have to react quickly since the Paragon/Renegade decisions occur as sparring moves. Attack him for Renegade points or carefully defend for Paragon.

End this conversation on a positive note and you'll be able to invite him up to your private quarters for another conversation. He's not interested in you romantically, but he respects you and asks for your professional advice on making career moves.

## UPGRADE YOUR EQUIPMENT

Before embarking on your next mission, we highly suggest that you upgrade your arsenal. Not only do you have several mods available to you, but you can also purchase upgraded versions of your current weapons. Rather than purchase several upgraded weapons, consider spending credits on upgrading one go-to weapon. If you're a sniper-friendly class, then upgrade your M-92 Mantis up to Level 5. Soldiers may want to consider investing their credits in a Level 5 M-15 Vindicator.

The choice is yours, but having one fully upgraded weapon early in the game is a benefit, even if you change your mind down the line.

# RESCUE THE TURIAN PRIMARCH

As you approach the turian moon, you find that the entire region around Palaven is flooded with Reapers. A careful approach to the moon ensures that you get by safely, but it's clear to see that Palaven's surface is being ravaged just as Earth's was when you left. Though your mission is on Menae, Palaven's moon, the outcome of this mission will determine whether Palaven will stand a fighting chance against the Reapers.

## LUNAR LANDING

The area below you is swarming with Husks. As you approach the landing zone (LZ), open fire from your shuttle to dwindle the number of Husks there. They're off in the distance, so use a medium- to long-range weapon with good accuracy.

Don't bother using any powers at the moment, since simple weapons fire should suffice for the task. The more Husks you eliminate on the approach, the less you'll have to deal with upon touching down.

Once you've landed, another wave of Husks rush in from the area next to the small turian guard shack. Either take cover behind one of the small rock mounds and pick them off from afar, or get up against the ridge beneath the guard shack and open fire. You'll be much closer to the action, but a good close-range weapon like a shotgun will shred the Husks at this range.

## TURIAN COMMAND CAMP

Once you've secured the LZ, speak to the turian soldier there; he'll direct you to the command base where the turian general is waiting. Climb onto the ridge and follow the path straight, then around the corner to the first barricade as the soldier suggested.

### NOTE

Pausing at certain ledges during the level and looking out over the landscape will sometimes reward you with unique banter from your squadmates. There is one of those lookout points here, on the left of the path.

The turian forces lower the barricade for you and grant you access. Take a minute to look around before finding the commanding officer. There is a wealth of weapons, mods, and other items to pick up before setting out.

### ITEM REQUISITION

There are plenty of items to be picked up before you speak with the turian CO. As soon as you enter the compound, examine the structure to your left; you'll find a **Med Kit** there. In the structure directly across from that one is a **Datapad**. Between both of those two structures, near the center of camp, is a white crate. Atop it is an **M-97 Viper Sniper Rifle** and a second **Datapad**.

Farther down camp, in a structure along the left side, is another **Med Kit** and a third **Datapad**. Pick them both up. That same structure also houses **Hahne-Kedar Greaves**.

The structure just past the general's, on the right side of camp, also has an **Armax Arsenal Shoulder Guard** and a **Pistol Piercing Mod I**, as well as a weapon bench where you can upgrade your weapons. Just right of the structure with the weapon bench, outside, are two more items: a fourth **Datapad** and **Pistol Magazine Upgrade I**.

Finally, grab the **Assault Rifle Piercing Mod I** and **M-27 Scimitar** shotgun near a small partition on the way out of the camp via the tower barricade.

General Corinthus is waiting to speak to you at his small command post. Speak to him to find out about Primarch Fedorian. As it turns out, you arrived a bit too late. Fedorian was killed half an hour prior to your arrival, and the turian forces are being decimated by the Reapers. Their numbers are too great to overcome.

#### TIP

**This conversation with the general is an opportunity to gain Paragon/Renegade points. Sympathize with the general's losses and you'll gain Paragon points. Keep the conversation all business and you'll earn Renegade points.**

The next turian in line to become the Primarch is currently unknown, and the only way to find out is to open up the line of communications with Palaven Command. The comm tower in the camp needs repair but is overrun by Husks.

Exit the camp and follow the waypoint marker to the comm tower just outside of camp. The exit is just past the barricade where you located the M-27 Scimitar. Walk out of the barricade and make a right. The tower is not far off, and neither are the Husks.

The first wave of Husks rushes you immediately. Order your squad members to take cover behind the nearest rockface and open fire. The speedy creatures won't waste time closing the gap, so use either Liara's or your (if you're an Adept) Singularity to slow them down.

Rather than focus on the Husks trapped in the Singularity, turn your weapon to the Husks that are still rushing you. As soon as you put them down, turn back to the enemies floating in the air, which may be coming back down to the ground any second now, and mow them down as well. However, the Husks don't let up yet.

#### APPROACH 1: ROUND THEM UP

Strong close-range classes such as Sentinels, Soldiers, and Vanguard's can use the wide-open space near the comms tower to circle-strafe around the enemy, dealing close-range damage as enemies approach you. Stay on the move to keep the Husks from getting too close, and use your squad members' powers to occasionally slow down the speedy beasts.

You'll incur some damage, as inevitably some Husks will make contact, but use quick melee blows to knock them off or use charged (heavy) melee blows to put them down. Vanguard's have the added comfort of using Shockwave, while Sentinels can use Lift Grenade and Throw to keep the Husks away.

#### TIP

**If the Husks are able to grab a hold of Shepard, then use melee repeatedly to escape their clutches.**

## APPROACH 2: "DRAW A LINE IN THE SAND"

Another approach, perhaps one more suitable to Engineers, Adepts, and Infiltrators, is to hunker down and "draw a line in the sand" by creating a wall of weapons fire and power combinations so that Husks cannot get near enough to cause you any damage. While Adept-class players can rely on powers like Singularity and Warp to cause massive Husk explosions, Engineers can launch Combat Drones deep into the battlefield, well past their line in the sand, to distract Husks while they destroy them from a safe distance.

Infiltrator-class players may be tempted to use the Tactical Cloak and get up close and personal, which is a sound tactic if their powers have been upgraded to sufficient levels; however, this early in the game, it is better to use the Tactical Cloak's damage bonus from afar rather than mix it up with a large swarm of Husks.

Eliminate all of the Husks around the communication tower, then assign one of your two squad members to repair it. It doesn't matter which member you pick; there are no long-term consequences to this decision. However, pick the squad member who least complements your current class and weapon/power loadout.

If you need someone with good Biotic powers, then ask James to fix it so Liara helps you in the following battle. If you need someone capable of dishing out major weapons damage, ask Liara to fix it so James can help during the battle. Make your decision, then prepare for another onslaught of Husks.

### TIP

As a Soldier class, we opted to keep James on the ground with us while Liara fixed the comm tower. While her Biotic expertise would have complemented our raw power on the battlefield, helping to slow enemies down while we destroyed them, James's damage output along with our own ensured that we'd make short work of the Husks before they could do damage. Similarly, if we were playing as an Adept class, we would've kept Liara on the ground. Biotic power combinations can match explosive, high-grade weapons fire when executed correctly.

If James is picked to fix the comm tower, an extra wave of husks will appear since James is not as technically savvy as someone such as Liara and will take longer to repair the tower.

The Husks attack from two different directions. Order your squad member to take point behind the tall pillar on the left, while you cover the area on the right. Hold them off long enough for your third party member to repair the communication tower, then begin your approach back to the camp.

You'll encounter several more Husks along the way as the path ahead is bombarded with flaming enemy drops, so lead your squad up to the small platform ridge on the right. This elevated position will grant you a better vantage point to direct your squad and fire on the enemy. Your efforts prove successful, and the comms tower comes back online. In no time flat, the general gets information vital to your mission. Return to camp.

### TIP

The following conversation between you, General Corinthus, and the rest of the squad can yield Paragon/Renegade points. So choose your responses carefully. Express a sense of hope and positivity and you'll gain Paragon points; focus on the negative and you'll gain Renegade points.

## DEFEND THE CAMP

Back at the camp, General Corinthus has located the next in line to become Primarch. Better still, he's on Menae, not far from your location. The new Primarch, a turian named Victus, is known to be unconventional and a skilled tactician; he's just the kind of help you need.

To help aid you in your search for the new Primarch, your old friend Garrus joins the squad. While you plan out your next move, Joker has some technical problems aboard the Normandy. Liara heads back up to the ship, while Garrus remains behind as a full member of your squad.

A Reaper Harvester dives in from above on its way to attack the airfield.

Follow the turian soldiers out to the airfield and immediately place your squadmates behind cover. Marauders—Reaper soldiers who were once turians—begin dropping in from above.

### ITEM REQUISITION

Sitting at the center of the airfield is a mod for your assault rifles. You can pick it up in the heat of battle, but the **Assault Rifle Magazine Upgrade I** is not going anywhere, so wait until after the battle is over to run out and get it.

The second level is one step down from that and has slightly more cover closer to the center of the battleground. The small rock mounds provide more cover but require you to be closer to the center of the action.

The third level is deeper into the battlefield, well away from the camp walls, but offers plenty of cover for the entire squad with enough room to move around.

This battleground essentially has three different "levels." The first level is just outside the camp walls, on the small raised ridge. It has little cover other than a small rock ridge on the left and a short wall for cover on the right. The

## APPROACH 1: LEFT, RIGHT, AND A ROAMER

The fight with the Marauders can be tough, especially at higher difficulty levels. One way to tackle it is to hang back, near the wall (first level), and perch one squad member on each side. Position your first squad member on the right, behind the small wall and the next on the far left. With both party members behind cover, your job is to roam around the battlegrounds and engage the enemy on one of the other two levels.

Vanguard or Infiltrator classes can excel as the roamer, using Biotic Charge and Tactical Cloak kills, respectively. If your build is better suited for long-range combat, switch places with James and send him into the lower level while you, an Adept, Engineer, or sniper-proficient build, can whittle down enemies from the safety of your cover.

## APPROACH 2: STAGGER YOUR FORCES

An alternate approach is to leave Garrus on the first level closest to the wall with his sniper rifle equipped, while you and James go down to the lower levels. Depending on which build you have, you can order James to take cover behind the center rock structure near the center of the battleground, while you go to level three and act as the first line of defense.

If you're not comfortable with close-quarters combat, then take the center area, while James is assigned to the area closest to the Reapers' landing zone.

## APPROACH 3: ALL IN

The third, and most dangerous approach, is to bring the entire party down to the third level and meet the Reaper forces head-on. This approach is best for Soldier, Vanguard, and Sentinel classes that can be well equipped for close-quarters combat. Use a good mixture of grenades, power combinations, and duck-and-cover tactics to stay out of harm's way and maximize your damage output.

Ironically, this may be one of the best tactics on higher difficulty levels since it requires lots of movement and power combos to be effective. The more you hang back against tough enemies, the more chances you give them to pin you in a bad spot.

### ITEM REQUISITION

After the battle with the Marauders and Husks is over, venture out to the raised ridge on the far right to find a stack

of supplies. On top is a bit of **Salvage**. Open it up to find some credits.

No sooner do you fend off the Reapers on the airfield than you get a call from Corinthus that Husks are overwhelming the camp's main barricade. Rush back to the camp and climb up the ladder to the mounted turret. Take the turret and immediately open fire on the Husks storming the barricade.

They approach from the far left and right, so keep the turret shifting from side to side as they approach. As you blow them away, your two squadmates automatically take position on your left and right to protect both barricade entrances.

### TIP

The mounted turret swings very slowly while zoomed in and firing, so let off the trigger to readjust between enemies.

Fend off several waves of Husks before the Reapers drop a Brute onto the battlefield. The Brute quickly rushes the barricade and knocks you off the wall onto the battlefield. The area is wide open, and a few Husks still remain. Immediately open fire on the Brute and begin whittling its health down.

Focus all of your squad members' efforts on the Brute while you move around the battlefield, and mow down any Husks that attack. If the Brute charges you, execute an evasive roll, then focus your fire on it as it passes you by. When it turns around, execute as many headshots as you can to knock off major chunks of its health.

After fending off the Reapers, General Corinthus is no closer to locating General Victus than before.

## LOCATE GENERAL VICTUS

Garrus was the last person to see Victus, so he's the best suited to lead you to his last location. Follow Garrus across the surface of Menae.

### TIP

Look up to see Palaven under attack and burning in front of you. You'll have more opportunities for unique dialogue options as you stop at the various vantage points along this path.

### ITEM REQUISITION

Shortly after seeing the surface of the war-torn planet, look on the ground to find a **Datapad**. Grab it, and keep following Garrus toward General Victus's last known location.

Continue following Garrus until you encounter a group of Husks climbing up the cliffside. They aren't much of a threat, so simply open fire or use another preferred method to eliminate them quickly.

## ITEM REQUISITION

Shortly after destroying the pack of Husks, you'll encounter a small group of stranded turian soldiers. Pick up the **Med Kit** near the soldiers, then the **Datapad** and **Sniper Rifle Spare Ammo I** upgrade on the left.

## TIP

During your trip across the moon's surface, pay attention to the banter between Garrus and James. Their conversation has information and reminders that are important to understanding both the political situation that Shepard is dealing with and upcoming missions.

Farther up ahead, a turian jet crashes in front of you. Examine the crash site, but don't hold out for any survivors. Leave the crash site behind and continue until you locate the next turian camp. Several soldiers are under siege from more Reaper forces. Jump in and lend a hand.

## CLEAR THE CAMP

General Victus and his men are under attack from several Reaper Marauders and Cannibals. As soon as you enter the camp, you join the fight. Order your squad to take cover behind the nearest rock structures, then rush to cover on the camp's left side.

The enemy forces have a slight height advantage, but not by much. To make matters more difficult, they also have decent cover on the area above you.

### APPROACH 1: FLUSH THEM OUT

Adept and explosive-proficient classes, such as grenade-toting Soldiers, can use powers and explosives to force Cannibals out of cover and into the open where they can get shredded by the rest of the squad. Classes with Cryo Ammo or Incendiary Ammo can inflict extra damage on these creatures and make this encounter slightly easier to manage.

When the Marauders begin charging, duck behind cover and use powers such as Warp or Singularity to weaken them. Otherwise, keep them at bay with explosives and whittle them down until the Brutes attack.

Focus your fire on the Brute's head and keep your distance. Don't stay out of cover for too long, or you'll risk taking too much fire from the remaining Cannibals and Marauders. If needs be, focus your squad's fire on the Brute to draw its attention away from you, while you finish off all other enemies nearby.

After eliminating all enemies but the Brute, rush deep into the camp to create some space, and lure the Brute out into the wide-open area where you can focus your fire on it without anything in your way. By now, the beast should be ready to drop easily.

When the second wave of enemies attacks, this time with two Brutes, take out the lesser enemies first. Let your squad distract the Brutes, while you eliminate Marauders first. As soon as they're down, turn on one Brute while your squad takes out the second.

## APPROACH 2: HANG BACK, THEN RUSH IN

The entrance to the camp has excellent spots for cover if you hang back a bit. Stay away from the ridge leading up into the main camp, and instead order your squad to take cover behind it. Hold off the Cannibals and Marauders by picking them off from your covered position.

If they get too close, use powers such as Shockwave or grenades to force them back. Your squad can hold them off for the most part, but your job is to inflict the most damage as they approach so your squad can clean them up easily.

When the Brute arrives, leave your cover and take the fight to it. Vanguard's can switch to a powerful shotgun, then use a combination of Biotic Charge and Nova to inflict maximum damage. For an added damage boost, follow up Nova with a charged melee blow. Other classes can simply use the bait-and-dodge tactic, while following up with shotgun blasts and melee blows to keep the Brute off balance. Keep peppering it until you bring the Brute down.

A second wave of enemies attacks from the other side of camp. This time, you must take out two Brutes at once. Since certain obstacles don't interfere with power-based attacks like Biotic Charge, Shockwave, and elemental attacks, lure the Brutes toward you, but place the large rock structures between you and the charging beasts. While they move around the rocks, use Biotics to inflict damage. Combinations like Warp and Singularity or Stasis and Warp Ammo are great for maximizing damage. Let your squad take care of the lesser enemies while you use your abilities to fell the two large Brutes.

## CAUTION

Don't get too comfortable while you're behind cover. Brutes are surprisingly athletic creatures capable of jumping over cover in certain situations.

## TIP

There is an extremely powerful weapon, the **Reaper Blackstar**, sitting near the structure on the right. Pick it up to get one ultradestructive shot capable of destroying a Brute with a single round. If you miss, you're out of luck. But if you land it, you'll cut your struggles in half.

## ITEM REQUISITION

After clearing the battleground, examine the structure just left of where you entered. On the ground are a **Med Kit** and a **Sniper Rifle Enhanced Scope II** mod. A second **Med Kit** can be found deeper inside the camp area, just outside of a structure on the left.

When you clear the camp, you find General Victus in his command station. He is shocked and amazed to find out that he is next in line to be Primarch. Convince him he needs to go with you and assume the station of Primarch. Even though he agrees to go with you, he cannot promise you his turian military support that you need. Not until the krogans join the war and help the war efforts on Palaven. Your next task is clear: recruit the krogans.

## ACT 1-PRIORITY: SUR'KESH

Before they will help with the war effort, the krogan have demanded a cure for the genophage, the sterility plague infecting their species. Go to the salarian homeworld of Sur'Kesh and safely extract the krogan females who hold the key to the genophage cure.

## MISSION BRIEFING

**Battlegrounds:** The salarian facility is a great level for varying your battle tactics. Even though each level of the facility shares a similar bifurcated floor plan, the battles can range from tactical flanking maneuvers to head-on firefights.

The facility has narrow halls, which allow close-quarter combatants and players with explosive-proficient builds to excel in the cramped spaces. The halls are not only narrow, but they're also very long, so players who favor sniper rifles and long-range combat can do well.

Power-heavy builds such as Vanguard and Adepts can use their abilities to create explosive combinations when enemies cramp together. All players, with the help of Liara, can use Singularity to block narrow passages and create funnels and choke points in the halls, forcing the battle exactly where they want it to go.

When encountering smoke-filled areas, be cautious. Instead of rushing in with weapons blazing, take cover and wait for the smoke to dissipate before attacking. The smoke may hide dangerous enemies, and rushing in can prove disastrous, especially for players who don't favor close-quarter combat.

**Consequence Overview:** Your time on the Citadel before the mission will offer you plenty of opportunities to shape your Paragon/Renegade character, but at the moment, those are all optional. Several missions that become available now, such as the encounter between Liara and the Asari Matriarch at the Presidium, are great opportunities for Paragon/Renegade decisions.

Once the mission begins, you're immediately presented with opportunities to generate Paragon/Renegade points. The first conversation you encounter, with Padok Wiks, will set the tone for the rest of this mission and will affect far-reaching decisions that impact the entire krogan species.

## WAR PREPARATIONS

There isn't much to do aboard the Normandy yet; however, that doesn't mean that there aren't things to do before getting to the next mission.

If you'd like to get straight to the next mission, skip to the "Host the Summit" section later in the guide.

### ABOARD THE NORMANDY

There isn't much to do on the Normandy at the moment, but you can use the vid-com to speak with Admiral Hackett and update him about the upcoming summit. Inform him that the asari are out but the krogan may have to join if the turians are going to help.

You can also stop by your private terminal and check your e-mail. You'll get a few messages (most notably from your hospitalized friend, Kaidan or Ashley), a salarian Spectre, and your old friend Aria from Omega. Also aboard the Normandy are Garrus, near the battery, and the new Primarch in the War Room. Speak to both men if you have the time.

### POWER OUTAGE

The strange technical problems that Joker experienced aboard the Normandy haven't gone away. In fact, they've worsened and seem to be emanating from the AI Core. Take the elevator down to the crew deck and visit the AI Core to investigate.

### VISIT THE CITADEL

Unlike the Normandy, there is plenty to do at the Citadel. Everything from visiting your friend in the hospital to reuniting with Aria and accepting some missions. If you aren't in a hurry, you can even complete some missions within the Citadel.

## HOST THE SUMMIT

With the asari officially out of the summit, the salarian, turian, and krogan representatives gather inside the Normandy to discuss a possible alliance to fend off the Reaper attack. Unfortunately, the history between these three species is dark and the summit becomes volatile almost instantly.

The krogan agree to assist you on the condition that you help cure the genophage. The salarian Dalatrass insists that a cure is a fool's errand, but the krogan knows of a salarian facility that has found one.

With your status as a Spectre, the support of the turian Primarch, and the krogan's inside informant, you have everything you need to rescue the krogan females who hold the cure from the Sur'Kesh facility.

## FREE THE KROGAN FEMALES

Upon arriving, the salarian security refuses to allow you to land. That won't stop the krogan Wreav, though. He slides open the shuttle hatch and leaps out. Rather than let him loose on the salarians, you jump out of the shuttle behind him.

This marks the beginning of your Paragon/ Renegade decisions during this mission. If you choose to intimidate and confront the salarians, you'll earn Renegade points. If you handle the situation diplomatically and keep Wreav on a leash, then you can earn Paragon points.

### PREVIOUSLY IN MASS EFFECT

If you've imported a save for your game, then you'll have a unique conversation during the shuttle ride to Sur'Kesh. If you destroyed Maelon's data in *Mass Effect 2*, then Wreav, or Wrex if he survived your adventure in *Mass Effect 1*, will confront you about your decision. You will have a chance to apologize for it or stand firm by your decision. This choice will affect their attitude toward you for the remainder of this mission, their time on Normandy, and the duration of a later mission, "Priority: Tuchanka."

## MEET WITH PADOK WIKS

After your initial conversation with Padok Wiks at the landing zone, he allows you to roam the area before heading into the facility. There isn't much to do here, except speak with Wreav and a salarian Lieutenant named Tolan near the entrance.

The mission to cure the genophage has a lot of deep-reaching repercussions, so take a minute to get as much information about the situation as possible. Tolan and Wreav each offer great perspective on the situation if you take a minute to listen.

# PREVIOUSLY IN MASS EFFECT

If you imported a save with Kirrahe alive from *Mass Effect 1*, Kirrahe will appear here instead of Tolan. However, if you have a save imported with Mordin dead from *Mass Effect 2*, Padok Wiks will follow you into the basement lab and lead you through it. Padok also replaces Mordin throughout the rest of the game if Mordin died in *Mass Effect 2*.

## TIP

If you're looking to get a few laughs and blow off some steam after such stressful missions, walk over to the salarian scientist working on a console on the right. Activate his console a few times to see what happens.

Speak to Padok Wiks when you're ready to go into the facility. As you prepare to go down to the female krogan holding area, the facility's perimeter alarms go off. A threat is nearing and you're now working on borrowed time.

Down in the facility, you run into your old friend Mordin Solus, who admits to being Wreav's inside informant. You learn that only one krogan female survived, so speak to her and prepare to move her out of the facility. Your tone with the female will dictate whether you earn more Paragon or Renegade points.

Before you can continue on your mission, however, Wreav urges you to free the female krogan before the intruders, now revealed to be Cerberus, infiltrate the facility. In order to free the female krogan, Mordin Solus must accompany her containment pod across several checkpoints to make sure it maintains integrity.

You must rendezvous with the pod at each checkpoint to make sure the Cerberus attackers don't destroy it and the genophage cure.

## ITEM REQUISITION

Before approaching the elevator and meeting the female at the first checkpoint, take a minute

to examine the area and listen to two of Mordin's research logs. Better still, there is a weapon mod, the **Assault Rifle Extended Barrel**, near the emergency exit, on a shelf along the back wall.

## NOTE

The level of the items you find will depend on whether you've purchased the previous level before finding this upgrade. So if you purchased the Assault Rifle Extended Barrel I mod, then you'll acquire level II here. If you haven't purchased it yet, then you'll acquire level I of the mod.

Cerberus manages to infiltrate the facility quickly and blocks your only path out of the lab. Activate the elevator to find a bomb. The explosion leaves the elevator inoperable, so your only way out is via the emergency exit at the rear of the room.

Exit the lab and take the ladder up to the next level. The first checkpoint is already under attack, so you'll have to rush up and relieve the pressure from Mordin and the pod.

## CHECKPOINT 1: LEVEL 1

As soon as you reach the top of the ladder, round the corner and prepare for battle with the Cerberus forces. The facility's halls are typically split into two sections, the outer passage nearest the balcony and the inner hall where most of the research seems to take place.

As soon as you reach the first floor, Cerberus Assault Troopers attack.

### APPROACH 1: LEAPFROG DOWN THE HALL

A tried-and-true method for advancing across long battlegrounds is to use a leapfrogging technique where the squad staggers their position in a vertical line down the battlefield, then moves one soldier at a time, from the back of the line to the front.

In this case, begin by ordering your squad to take cover ahead of you and allow them to engage the enemy. As they engage, move from the back to the front of their covered position, taking down enemies as you go. This first engagement can be easily won without getting too fancy.

### APPROACH 2: FLANK

Another approach is to use the inside hall to outflank your opponent. While this first encounter may not require an intricate, well-executed flank, this is a great time to practice the maneuver in this environment. It will help in later levels during this mission if you have a solid flanking maneuver in your battle repertoire.

At the beginning of the battle, direct your squad to the inside of the lab area (the inside hall), while you engage the enemy in the outer hall. Slowly approach the enemy down the hall, using a combination of weapons fire and powers such as Singularity, Stasis, and Overload to slow and stun the opposition.

### APPROACH 3: SEND IN THE TROOPS; YOU HANG BACK

Sniper-friendly classes like Soldiers and Infiltrators can hang back and carefully pick off enemies at a distance while the other two squad members take the fight to the Cerberus soldiers. This can get a bit tricky when the second wave of Cerberus troops arrive and take the inside of the lab.

If they do, either switch to a better close-range weapon and pick them off from the outside, or go into the lab area and use power combinations to take them down. Infiltrator-class players can use Tactical Cloak to sneak up on enemies and dispatch them from behind.

#### ITEM REQUISITION

Before going up to the next level, stop and check the Research Log and open the **Medical Station** to get a Medi-Gel pack

and/or some experience points. There is also a **Datapad** on the bench near the exit door. Grab it before you go.

Exit this floor via the rear door, and stop as a rogue yagh escapes from its containment cell and wreaks havoc across

the facility. Make a left and jump over the small wall, then make a right and leap over the gap to bypass the jet flame from the demolished wall. Leap over the wall on the right to get back onto the main hall and go up the stairs.

#### ITEM REQUISITION

Look on the ground immediately after leaping over the small gap. A **Shotgun Spare Ammo** weapon mod

is sitting on the ground. Grab it just before leaping back over the wall toward the stairs.

## CHECKPOINT 1: LEVEL 2-POD

The second level of Checkpoint 1 is where the pod must stop. To keep it from being destroyed, you must clear the area of Cerberus troops and activate the pod controls to advance it to the next checkpoint.

The battle for the pod begins as soon as you reach the top of the stairs to Level 2, as several Centurions and other Cerberus troops are dropped off by a transport shuttle.

### APPROACH 1: LEAD WITH EXPLOSIVES

As soon as you reach the top of the stairs, a group of Cerberus troopers attacks behind the safety of their smoke grenades. Rather than rush in and potentially encounter a Centurion at close range, either toss a grenade into the smoke or use an Explosive Power combo like Singularity and Warp on the nearest enemy.

Let the smoke dissipate, then quickly shoot your way into position where the smoke once was. Take cover behind the planter and aim down the long hall, watching for Cerberus soldiers to give away their positions.

Once you're clear, begin moving your squad down the outer hall (it's the wider section of the two), and lead their movement with more explosives. Clear out a section with an explosive (or flush out the enemy), then mow past them with weapons fire.

### APPROACH 2: TAKE THE INSIDE HALL

An alternate approach, one friendly to players using weapons-heavy builds, is to give up the outside hall and direct the entire squad into the inside hall (the lab area). Once inside the lab area, use the partition wall as cover and pop out to open fire on the enemies nearby.

Shotguns and assault rifles are the way to go with this approach, since they'll offer the best chance of maximizing damage at close range. The benefit of this approach is that the outside hall has less areas for the enemy to use as protective cover.

#### ITEM REQUISITION

Before activating the pod, examine the specimen-containment area across from the elevator. A **Datapad** is sitting on a small console near the containment cells.

Activate the pod when the coast is clear, and send Mordin up to the next level. An explosion rocks the elevator as a Cerberus transport blows open a hole in the wall. Take cover and use your preferred method of destruction to take out the two Cerberus Assault Troopers on the shuttle. With them out of the way, you can go through the new hole in the wall and make a left toward the next area.

## CHECKPOINT 2: LEVEL 1

This next hallway is the beginning of the approach to the next checkpoint. Quickly take cover and wait for the Cerberus troops to disembark their transport shuttle down the hall.

### APPROACH 1: FLANK

As soon as you enter this section, rush across the hall and leap over the partition into the inside hallway. Leave your squad to advance down the long, outer hall while you pick off enemies from the inner hall (the lab area).

Don't hesitate to get ahead of your squad as you execute a deep flank to surprise the enemies from their right side. As the Cerberus forces engage your squad in the outer hall, you can pick them off from the inside hall.

If you eliminate the enemies farther down the lab area, you can even exit out the back end of the lab and pinch the enemy from behind in the outer hall area.

### APPROACH 2: OCCUPY THE LAB

An alternate approach is to direct the entire squad into the lab area and use the inside wall supports as cover from

the enemies down both sides of the hall. The partition between the two sections will also provide decent cover if you choose to split your squad between both sides of the inside hall.

Lead with explosives as you approach down the lab area and exit through the rear of the hall. Then sweep out and around as you rush any remaining enemies.

With the area clear, you can exit the floor through the rear door and go up the stairs to the next level.

#### ITEM REQUISITION

There is another weapon mod in this lab. Pick up the **Pistol High-Caliber Barrel I** from the inside wall in the lab. It's sitting on a shelf.

## CHECKPOINT 2: LEVEL 2-TURRET

On this level, you're greeted by a Combat Engineer and his assault turret down the hall, as well as several other Cerberus soldiers. If you exit cover for longer than a few seconds, the turret can make very short work of you and your squad. This next section will be tricky.

### PREVIOUSLY IN MASS EFFECT

If Kirrahe is alive from *Mass Effect 1* in your save import, there will first be a scene where you talk to him, and then see the Combat Engineer introduction.

### APPROACH 1: FLANK

The most successful approach for this level is to use a well-timed flanking maneuver to avoid turret fire. As soon as you enter into cover on the hall's right side, the turret opens fire. Wait for the turret to temporarily shift targets, then dash across the hall to take cover on the left side.

Wait here until it shifts again, then dash down and to the right, into the lab area where you'll have much more cover and the entire length of the lab to flank the turret and the rest of the Cerberus squad.

Once you're safely behind cover, advance down the lab until you can focus your attention on the turret. Engineers can use their drones to distract the turret while you inflict direct damage on it. Similarly, if you brought EDI with you as a squad member, her Decoy ability can also relieve some of the pressure from you while you attack.

Use Overload, or close-range weapons like shotguns, to quickly destroy the turret. If you don't have a shotgun, use your assault rifle in short controlled bursts with special ammo such as Warp, Disrupter, or even Cryo Ammo. As soon as you destroy the turret, turn to the Combat Engineer and eliminate him too. If you let him linger, he'll spawn another turret and you'll have to start all over again.

### TIP

Combat Engineers can repair turrets, so try to eliminate them quickly. In some cases, it may even be worthwhile to destroy them before attacking the turret.

### APPROACH 2: INFILTRATE OR CHARGE

Close-quarter-combat classes can approach this battle a bit more dangerously. Vanguard and Infiltrators can use Biotic Charge and their Tactical Cloaks, respectively, to close the distance between you and the turret.

As an Infiltrator, activate your Tactical Cloak and either get in position to flank, or directly attack the turret with your strongest weapons. The turret will immediately target you and you'll be in direct contact with any of the Cerberus troops, but your squad can help alleviate that contact.

As a Vanguard, use Biotic Charge to zoom to either the turret or the Combat Engineer, then follow up with Nova to execute a devastating radial attack on all nearby enemies. Follow up with a few close-range shotgun blasts to the turret and finish it off.

Exit via the door at the end of the hall and follow the short hall into another section of the facility.

### ITEM REQUISITION

Before leaving this hallway, pick up the **Salvage Parts** in the hall to acquire a few more credits. When you're ready to continue, activate the door at the end of the hall, and enter the next section. Just on the door's other side is a **Medical Station**. Open it for experience and/or some Medi-Gel.

## CHECKPOINT 2: LEVEL 3-TWO-STORIED ROOM

This next section is a demolished room with stairs leading up to a second level. As you enter the room, a wild beast mauls one of your would-be Cerberus ambushers. Take advantage of the beast's surprise attack and get into position.

### APPROACH 1: DEATH FROM ABOVE

As soon as you enter the room, direct your squad to take cover behind the small set of steps on the left while you dash up the stairs on the right. Open fire on the Cerberus troops as you rush up the stairs and quickly clear out the top level.

While you do this, your squadmates will engage the enemies on the level below and keep them at bay. With the top level completely in your control, position yourself above and behind the enemies on the lower level and aim at their backs.

If any Cerberus Centurions attempt to reach you, shoot them down, then open fire on the enemies below as they approach your squadmates. When the two Guardians begin to slowly approach your squadmates, either blow them away from behind with a grenade or use standard weapons fire to get clean headshots. If you're an Adept-class player, then use powers like Warp to inflict damage.

### APPROACH 2: COVER FIRE

Another approach to this firefight is to take cover on either side of the entrance area. Direct your squad to take cover on the steps on the left while you take cover behind the structure on the right. Stay behind cover and use a combination of powers and weapons fire to eliminate enemies as they approach.

When the Guardians approach, use your squad's powers to slow them down while you pepper them with weapon fire. If you are an Adept, use Pull to yank their shields off, then follow up with fire.

If you're a Soldier, you can use Adrenaline to slow time, and carefully place a few bullets between the enemy's vision slots to blow them up. As always, Singularity can help remove a Guardian's shield just as well as a well-tossed grenade.

When you've cleared the entire area, go to the top level and through the door.

# ITEM REQUISITION

There are three items on the lower level. The first, **Armax Arsenal Greaves**, is on a counter near the center of the battle area in the main room. The other two, a **Sentry Interface** and **Salvage Parts**, are behind the main room, around the corner sitting near a small bench. Grab everything before going back to the top level.

## CHECKPOINT 2: LEVEL 4-POD

The fourth level has the containment pod. When you reach it, the Cerberus troops are busy attacking the pod and fail to notice you right away. You have the advantage.

### APPROACH 1: SURPRISE ATTACK, OUTER HALL

Since the Cerberus troops are focusing their attention on the pod, you can lead your squad down the outer hall directly toward the troops near the pod. Rush the troops using medium-ranged weapons and damaging power attacks like Warp, Incinerate, or Cryo Blast.

You'll incur a lot of fire as soon as they spot you, but at least they'll take their attention away from the pod for a moment. When they do, take cover and begin picking them off. If any enemies shift their focus back on the pods, take them out first despite the rest of the squad shooting at you.

#### TIP

Always focus on the enemies shooting at the pod first. If the pod is destroyed, the mission is over anyway. However, if you lose a squadmate, they can be revived. The pod is your number-one priority.

### APPROACH 2: SURPRISE ATTACK, INNER HALL

An alternate approach is to attack from the inside hall. The assault is the same as in Approach 1; the only difference is that you'd have slightly more cover at the cost of a better line of sight to the pod that is under attack. The lab also provides you a better approach to the rear of the pod's attackers as opposed to their flank.

If you take this route, however, you'll be able to approach the enemy a bit quicker if you sprint down the center of the lab. The faster you reach the enemy and divert their fire, the less damage the pod will take.

## ITEM REQUISITION

After eliminating the Cerberus troops, you can pick up a **Pistol Scope I** weapon mod from a table in the lab. You can also listen to

the nearby Research Log. In a room at the far section of this floor is a **Medical Station** and the **Scorpion** pistol.

## TIP

Even if you're not fond of using pistols, equip the **Scorpion** immediately. This weapon is a great help during the final few battles in this mission.

Before you can activate the pod, you must reestablish power using the power terminal in the small room at the end of this section. Place the power terminal back in place, then return to the main room to fend off several more Cerberus goons.

## APPROACH 1: SCORPION

If you've equipped the Scorpion, then the next battle can be a lot of fun. Take out the Scorpion and begin firing at the Cerberus troops as they move from cover to cover. The Scorpion's ammunition works similar to sticky grenades: They attach to whatever they hit; then, after a few short seconds, they explode, causing major damage.

If you stick the miniature projectiles on an enemy, it's only a short matter of time before they explode. The more projectiles you attach to a target, the bigger and more deadly the explosion.

You don't have to stick the projectiles onto the enemies themselves. You can also place them on nearby walls, their shields, and other objects so the explosion causes some amount of collateral damage.

Guardians in particular can be undone by the Scorpion's unique ammunition. Place a Scorpion shot near or slightly behind the Guardian so that the explosion happens behind their shield, either killing them or knocking their shields away.

## APPROACH 2: HOLD POSITION, LET THEM COME TO YOU

An alternate approach is to rush up to the pod's control console and wait for the Cerberus troops to get near. As they do, pop out of cover and open fire.

Their goal is to destroy the pod, so as long as you stand between them and the pod, you'll have the better position. From here, you can direct your squad back near the rear end of the lab, closest to the pod. This will lure the Guardians down the lab while you and the squad could surge around the outer hall and attack them from their weak side.

## ITEM REQUISITION

The second wave of Cerberus troops arrived near the elevator at the hall's opposite end. A curved bench near the elevator now has an **M-13 Raptor Sniper Rifle** that wasn't there when you arrived. Pick it up before leaving this level.

## TIP

If you're playing on a high difficulty setting, now is a good time to equip your most powerful sniper rifle, regardless of which class you're playing.

With the floor under your control, walk up to the second checkpoint and activate it, sending the female krogan and Mordin on their way.

A third wave of enemies attacks once the pod is on its way to the landing area. Take cover and open fire. It's only a small complement of soldiers, so keep it simple. Overwhelm them with cover fire and clear the way back to the elevator.

## FINAL CHECKPOINT: LANDING AREA

Take the ladder elevator to the final checkpoint—the landing area where you first touched down. There you'll find the Cerberus soldiers already laying heavy fire on the pod. Luckily, you've got the advantage: You have an elevated position and the element of surprise as you arrive behind them.

### APPROACH 1: ABOVE AND BEHIND

Maintain your advantage by running across the upper walkway before you open fire. Station your two squadmates along the upper wall and create a long wall of fire when you finally open up on them.

Your elevated position should allow you enough of a vantage point so you can fire on them and eliminate their cover. If any Cerberus Centurions or Assault Troopers attempt to rush up the steps and engage you, mow them down or use a power like Shockwave to knock them away.

### APPROACH 2: RUSH

If you want to confuse the enemy, you can create two fronts of fire by ordering your squad down the nearest steps while you rush across the upper walkway to engage the enemy from the far side. You can pinch the enemy on two sides this way and divert their fire away from the pod.

Finally, activate the last checkpoint and send the female krogan away safely. When you do, an Atlas and a few more Cerberus soldiers arrive.

## ATLAS BATTLE

There are several ways to take down the Atlas. Since they're slow lumbering mechs, most classes can easily outrun the Atlas and take cover as it ambles toward them. However, in small cramped spaces such as this, you must be able to move deftly from cover to cover to avoid getting blown to pieces.

### APPROACH 1: CAT AND MOUSE

The most reliable way to eliminate an Atlas is to play cat and mouse with it. Take cover as soon as it begins stomping in your direction. Duck left, and move from cover to cover, using the small tables and consoles to guide you back to the upper level.

The Atlas will give chase, but you'll have the entire length of the walkway to take cover and open fire on it. Pick your shots carefully and don't stay out of cover for too long or you'll risk taking missile fire from the metal beast.

While you engage the Atlas, order your squadmates to take out the other Cerberus troops. They should be able to keep them off your back long enough for you to eliminate the Atlas.

### APPROACH 2: TAKE CONTROL\*

#### NOTE

\*This approach is best on higher difficulty levels.

This method requires a high-powered sniper rifle and a lot of speed. Soldiers, Infiltrators, and Vanguard

can have a much easier time doing this, as long as their squadmates distract the other soldiers enough.

Begin by equipping your sniper rifle before the Atlas arrives. Once it does, either use Charge, Tactical Cloak, or Adrenaline to rush the Atlas mech. Get directly underneath it and zoom the sniper scope on the Atlas's protective glass, and fire.

Continue picking apart the glass until it shatters, leaving the Atlas pilot exposed. Snipe the pilot one more time to leave the Atlas untouched and ready to hijack. Finally, hop inside and turn the mech against the remaining enemies.

With the Atlas down and the female krogan and Mordin safe, Mordin can continue his work generating the genophage cure. Back on board the Normandy, Wreav and Primarch Victus both have issues they'd like to discuss with you in private.

#### NOTE

For your next mission, you can choose to either complete Primarch Victus's request or Wreav's; the choice is yours. However, you cannot continue until you complete one of the two. Completing one mission does not eliminate the other, so if you'd like, you can complete both before proceeding to the next Priority mission.

# ACT 1: TUCHANKA-TURIAN PLATOON

Primarch Victus has asked for help with a downed ship and has provided a NavPoint on Tuchanka. Land on Tuchanka and investigate.

## MISSION BRIEFING

**Battlegrounds:** Tuchanka isn't a hospitable planet to begin with, but the Reaper invasion has made it nearly unbearable. The battles here rage across narrow, debris-filled halls and elevated platforms and culminate in a wide-open arena.

Regardless of whether the area is a narrow hall or a courtyard, the rubble and debris will always provide excellent cover for you and your team.

Power-heavy classes such as Adept and Vanguard can make great use of the cramped hallways, while weapon-proficient classes such as Soldiers can exploit the areas by keeping enemies at bay with a constant barrage of heavy fire.

**Consequence Overview:** Prior to beginning this mission, you can speak to Lieutenant Cortez aboard the Normandy. Lieutenant Cortez is struggling with some deep personal issues, and your responses, whether sensitive and understanding or cold and unfeeling, will align in a clear Paragon/Renegade result.

Don't worry about your conversation with Primarch Victus to trigger this mission. Even though you can investigate about his motivations and get more background, the responses won't affect your Paragon/Renegade leaning.

You'll also engage Lieutenant Victus in a critical conversation in which you either motivate him through charismatic support or steeled military harshness.

### Mission Locks

None

## WAR PREPARATIONS

The Normandy is running smooth, and everyone is well aware of the issues at hand. Despite that, there are still people aboard the ship who are dealing with issues of their own.

If you'd like to get straight to the next mission, skip to the "Extract Turian Survivors" section later in the guide.

### ABOARD THE NORMANDY

Any good leader will look after the welfare of his or her men. Lieutenant Cortez is quietly suffering down in the shuttle bay. If you want to continue establishing a rapport with him, go down to the shuttle bay and speak with him.

### VISIT THE CITADEL

Now is also a good time to wrap up any other Citadel missions you may have taken on earlier. There haven't been many new developments at the Citadel, but it's always worthwhile to visit, check the shops, and acquire more experience, credits, and war assets.

However, do check your e-mail. If you haven't already visited the hospital to check up on Ashley or Kaidan, do so. And if you have, they may have sent an e-mail saying that they are ready for another visit. To build rapport with them, it may be important to visit them once again, now that they have become a Spectre. Ignoring Ashley or Kaidan in the hospital may have serious consequences later in the game.

## EXTRACT TURIAN SURVIVORS

To set out on your next mission, speak with Primarch Victus in the war room. He's tight-lipped about the details, but he does let it slip that his son was in charge of the failed mission to Tuchanka. Now that they've been pinned by Reaper forces on the krogan home planet, the turian mission has stalled. It is of high priority that the turians complete their top-secret mission, and rescuing them from behind enemy lines will allow them to do so.

Your mission is to reach the stranded turian squad and rescue them from behind enemy lines.

As soon as you land, you find the planet war-torn, and communication is hard to maintain. The only way to communicate with Lieutenant Victus is to have the Normandy patch you through and act as a relay.

The lieutenant is in a tough spot, and you're his only hope at the moment. Get moving.

### ITEM REQUISITION

This mission is rich in items, weapons, and mods that you can pick up. The first one is in a pile of rubble just left of where you start. Pick up the **SMG Magazine Upgrade** before turning right and beginning the mission.

Go up the ladder on the right and follow the dark winding path to a small opening. There, in the dimly lit passages, you can spy several Husks hunched over, waiting to ambush a passerby. You've got the element of surprise, so use it. Either use devastating power combos to blow them all up or open fire on them from behind.

You can probably destroy one or two before they realize what is happening. If they slip away from your sights before you can attack, use grenades or Singularity to slow them down.

Otherwise, a few solid melee attacks and close-range fire will cut them down.

### TIP

If you have **Cryo, Warp, or Incendiary Ammo**, now is a good time to activate it.

### ITEM REQUISITION

After destroying the Husks, follow the path deeper into the Tuchankan battlefield. Look on the ground where the Husks

were sitting to find some **Salvage Parts** that yield credits. Then continue up the next ladder and over a small gap to find an **M-9 Tempest** pistol.

Deeper down the path, you'll encounter a crashed pod surrounded by several Cannibals. Once again, you've got the element of surprise and can easily rush up to the first Cannibal without it noticing your presence. Stay low as you slide from cover to cover until you're nearly directly behind the Cannibal.

#### ITEM REQUISITION

After climbing up the ladder, immediately look left. You'll find a **Sniper Rifle Spare Ammo** mod. Pick it up quickly before proceeding.

Turn left after climbing the ladder and aim at the Harvester that landed across from the small chasm near the crashed shuttle. Open fire with everything you've got, but stay behind cover as much as possible. The Harvester's attacks can be extremely devastating if they hit you directly.

You can't destroy the Harvester yet, so your goal is to divert its attention away from the turian team and the crashed escape pod. By splitting up from your team, you give the Harvester several different targets. Focus your fire on the small, blue circle near the bottom of the beast. After sustaining too much damage, the Harvester flies away, leaving the turian squad alone.

Go down the path to the right and move to the next point.

Open fire to get its attention and put it down. Quickly order your troops to engage the other Cannibals nearby before lining up the entire squad near your position and taking protective cover near the farthest fallen pillar. After destroying the Cannibals, leave your squad behind the pillar, while you go up the ladder to the right.

#### TIP

Alternatively, you can still complete this mission by letting all the turian pods in this mission be destroyed. However, this will have slight negative effects later in the level.

You can also simply walk past the pods and ignore the turian survivors, in which case the pods are also destroyed by the Reapers, and your squad will not be happy that you're abandoning them.

#### ITEM REQUISITION

As you proceed down the narrow halls and demolished pathways, you'll encounter a dead turian soldier. In front

of him is a **Phaeston** assault rifle. Around the corner and slightly behind the dead body is another weapon mod. Go around the side of the pillar and pick up the **SMG Ultralight Materials** mod.

Drop down the ladder to the left of the dead body with the Phaeston, and make a quick right to find a **Med Kit** near the second pillar.

Follow the path down the ladder and past more rubble until you find another small firefight raging between the turians and the Reaper invaders.

There is no reason to get too fancy during this encounter, since the Marauders and Cannibals in the area are out in the open. You have the benefit of better cover than they do, so use it wisely. Take cover behind the fallen pillars and begin peppering them with weapons fire and power combos until you've utterly demolished them.

Once the first batch of enemies is destroyed, the Harvester returns. This time, its health has been replenished, so begin firing on its weak spot again to deplete its health quickly.

Spread your squad across the fallen pillars so everyone has cover, and split the Harvester's attention across several fronts. If any Husks get in the way, dispatch them quickly, then return your attention to the Harvester. Once again, the Harvester flies away after sustaining too much damage. When it does, make a right, drop down a small ridge, and continue down the path toward Victus and his men.

ITEM REQUISITION

After the short drop, you'll find a crate on the path's left side. Open it up to find a **Hahne-Kedar Chestplate**.

Continue down the path a bit more to another short drop, and find a **Flight Recorder** that logged some interesting conversation aboard the turian ship. Directly across from the recorder is a weapon mod. Pick up the **Shotgun Smart Choke I** and keep moving.

As soon as you descend the ladder, turn left sharply to greet the oncoming Cannibals. Toss a grenade ahead of you, or use a similarly explosive Biotic power. Make short work of the Cannibals, because the Harvester is directly behind them, and its attention is focused solely on you and your squad.

The sooner you eliminate the Reapers between you and the Harvester, the better.

The Harvester drops off another batch of Husks farther down the path. Take cover and open fire on them to bring them down quickly. Keep moving, pick up the Salvage on the ground to score some credits, and descend another ladder, going deeper into the Tuchankan battlegrounds.

Once they're gone, rush up the debris-filled path and order your squad to take cover behind the rubble just ahead of you. Stay back a bit, behind cover of rubble, and open fire on the Harvester one more time. Carefully duck for cover and pop out only to fire when it's safe.

The Harvester retreats a third time, but it doesn't go very far. Follow the rubble around the corner to the left and take the fight to the group of Marauders and Cannibals waiting to ambush you. There's plenty of rubble and debris here as well, so both you and your enemies will have plenty of cover to use.

Rely on powers, grenades, and quick flanking maneuvers to flush them out of cover and allow your squad to inflict heavy damage. Shred the enemy forces and keep moving. You'll encounter several short drops leading down and around to a larger battle area.

#### ITEM REQUISITION

After the first short drop down the rubble, look left. There, on the ground, is another weapon mod. The **Sniper Rifle Extended Barrel** can be a great mod for sniper-proficient classes. Don't leave it behind.

#### APPROACH 1: HUG THE REAR WALL

When you finally reach the next stage, the battle rages in a wide-open area full of more fallen pillars. Order your squad to take cover behind the rubble along the far left (rear) wall. This will give you a great vantage point of the entire battle area while maintaining a safe distance from the majority of the enemies.

Keep a close eye on the Brute and monitor its movements. If it's at a safe distance, focus your attacks on the nearest enemies, taking down Marauders first, then Cannibals. As soon as the Brute charges you, dodge out of the way and open fire on it as it passes you by.

Relocate to another position and resume your attack on the Reapers nearby. If the Brute stays too close, order your squad to distract the lesser enemies, while you focus on the Brute. If you're an Engineer-class player, use a Battle Drone to further distract pesky enemies. Vanguard players can also use a Biotic Charge/Nova combo to whittle down the Brute's health.

#### APPROACH 2: TWO LINES OF FIRE

A second approach, one slightly more dangerous, is to split up the squad into two attacking parties. Send your two squadmates along the far left wall, while you fight your way up the right ridge. This creates an L-shaped wall of fire across the battle area.

The only dangerous part of this approach is that you'll spread your line a bit thin and be out in the open by yourself. If the Brute turns its attention to you, hide behind cover as much as possible and pop out only to fire on it. Direct your squad to use their powers on the Brute, and it'll temporarily redirect its attention away from you. Take advantage and fire on its backside when it does.

#### TIP

**Cannibals are called that for a reason. You can down a Cannibal in the battle arena to create bait for the other Cannibals. When they rush over to the fallen Reaper, they'll leave their cover and expose themselves to fire.**

#### ITEM REQUISITION

About midway up, along the right ridge, is a **Reaper Blackstar**. It has only one shot in it, so use it wisely.

#### TIP

**You may be tempted to use the Reaper Blackstar on the Brute and finish it off quickly, but there is a much better use of the Reaper weapon.**

## HARVESTER BATTLE

### APPROACH 1: REAPER BLACKSTAR

#### CAUTION

**The Reaper Blackstar needs to charge before it fires. It doesn't take much more than a few seconds, but those few seconds can mean life or death if you mistime it. Be sure you have enough time to fire before popping out of cover.**

### APPROACH 2: STANDARD FIRE

The other, standard way of taking down the Harvester is to approach it the same way you've done so the previous three times. Take cover and pick your shots. You have a lot more debris here to use for cover, so don't hesitate to move from cover to cover and keep the Harvester guessing.

Pick your shots carefully and open fire on it as steadily as possible. Eventually, the creature goes down.

With the Harvester gone and the area clear of all enemies, you can finally meet up with the turian platoon at the far end of the battlegrounds.

When you reach the group, the men have begun turning on their leader, Lieutenant Victus. Now is your opportunity to either gain Paragon or Renegade points. As Victus tells you about their mission, respond with encouragement to gain Paragon points, or harshly order him to do his duty to gain Renegade points.

#### TIP

**Completing this mission unlocks one of the few "timed" optional missions in the game. As soon as this mission is completed, you unlock "Tuchanka: Bomb" and have up to three missions to complete it. That means, if you complete any three missions after this one without completing "Tuchanka: Bomb," then that mission will lock and you won't be able to complete it going forward. If you want to complete "Tuchanka: Bomb" immediately, skip to page 343.**

## ACT 1-ATTICAN TRAVERSE: KROGAN TEAM

A krogan team has gone missing while investigating rumors of activity at the Rachni relay. Investigate the missing team and find out what happened.

## MISSION BRIEFING

**Battlegrounds:** The caverns of Utukku are dark and littered with dangerous creatures. Not only are the Rachni monstrosities quick, swarming creatures capable of flooding around cover, but they're also born of explosive pods that can inflict major damage if you take one wrong step.

The terrain is rough. You'll often go from having the level advantage to shooting up at enemies within a few steps and can often find decent cover if necessary.

Since many of the creatures in the caverns—the most dangerous ones, at least—tend to be stationary, skilled tacticians can formulate strong military-grade maneuvers in some of the larger areas. Rush tactics, flanking maneuvers, and even pinching strategies are all viable options here.

**Consequence Overview:** Even though you may not have a lot of Paragon/Renegade decisions throughout the mission, you will be faced with a critical decision that affects the larger Galaxy at War scenario at mission's end.

The decision is tied to Paragon/Renegade points but not so significantly that deviating from your preference for the sake of this decision will negate your previous decisions. You can deviate from your Paragon/Renegade leaning for the final decision in this mission and for the sake of choosing one War Asset over another.

## WAR PREPARATIONS

The Normandy is running smooth, and everyone is well aware of the issues at hand. Despite that, there are still people aboard the ship who are dealing with issues of their own.

If you'd like to get straight to the next mission, skip to the "Investigate Missing Scouts" section later in the guide.

### ABOARD THE NORMANDY

There isn't much to do here, but any good leader will look after the welfare of his or her men. Lieutenant Cortez is quietly suffering down in the shuttle bay. If you want to continue establishing a rapport with him, go down to the shuttle bay and speak with him.

### VISIT THE CITADEL

Now is also a good time to wrap up any other Citadel missions you may have taken on earlier. There haven't been many new developments at the Citadel, but it's always worthwhile to visit, check the shops, and acquire more experience, credits, and war assets.

## INVESTIGATE MISSING SCOUTS

To kick off this mission, you must first speak with Urdnot Wreav in the war room. He explains that his best group of soldiers has gone to investigate a group of missing scouts. The scouts were sent ahead to verify rumors about the Rachni and the Rachni relay.

### NOTE

You will have to speak with Wrex in this situation if he's alive.

Your mission is to meet up with the krogan team Aralahk Company and help them search for the missing scouts. Upon landing, you find that the Aralahk Company commander has been waiting for you. This first conversation with Aralahk Company can yield Paragon/Renegade points, so keep your responses in line with your desired results. Be overly aggressive or confrontational and you'll earn Renegade points. Be agreeable and you'll be rewarded with Paragon points.

### ITEM REQUISITION

Before running off to find the scouts, take a minute to pick up any and all items you can find near the Aralahk Company camp. In the structure on the left, you'll find an **M-300 Claymore** shotgun, a **Pistol High-Caliber Barrel** mod upgrade, and one **Spare Parts** package.

Farther down the path, near Urdnot Dagg, is another structure. This one contains the **SMG High-Caliber Barrel** mod and a weapon bench. Just outside, you'll find another **Spare Parts** container.

### TIP

The **M-300 Claymore** is an extremely effective shotgun. Equip it now even if you don't like using shotguns. The combat in this mission can frequently go from long-range to close-quarters in the blink of an eye, and this weapon is one of the best at close- to midrange.

When you're ready to proceed, either speak to Dagg or step into the structure directly to his left. As soon as you step inside, the structure plummets down the cliffside.

You land safely, but the fall splits you up from Dagg and his crew. Proceed down the darkened cavern and pick up the **M-451 Firestorm** near the dead krogan.

#### PREVIOUSLY IN MASS EFFECT

If you have an imported save where Grunt is still alive, then Grunt will be present here rather than Urdnot Dagg.

To the left is a large web blocking your path. Use the Firestorm on the webbing and burn it up. Drop down the small ridge and continue to burn webbing as you go. The caverns are bathed in Rachni webs, so pick up and keep the Firestorm handy whenever you can.

Continue exploring the caves until you reach a small group of spore pods. Use the Firestorm to make them burst. The explosion also releases several small Swarmers that scurry toward you and attack. They don't inflict a lot of damage alone, but in swarms they can be very dangerous. Scorch them as well.

#### CAUTION

The cavern is dark and hard to navigate even with your flashlight. Go slow and keep your head on a swivel to spot spore pods. If you get too close, they'll explode automatically and inflict major damage. Later in the mission, fresh eggs will spawn Swarmers that will finish the job if the pod explosions don't.

#### TIP

You'll find plenty of M-451 Firestorm guns strewn about the cave, so you shouldn't have too much trouble burning through this area. However, don't waste precious fuel. If the Firestorm in your hand still has some fuel, use up as much of it as you can on nearby webs and pods before picking up the next one. That way, you get the most out of every tank.

## RAVAGER ENCOUNTER

After burning past several webs, you come upon a small drop in the caves. Drop down into a large, wide-open cavern. Directly across from you is a tall ridge with a Ravager. It drops down and wastes no time in attacking.

### APPROACH 1: FRONTAL ASSAULT

The Ravager isn't a very mobile enemy. Rather than swarm or flank or rush, the Ravager is completely content staying in one place and unleashing a barrage of explosive projectiles on you. That is both the Ravager's greatest strength and greatest weakness.

Daring players, especially those using Vanguard, Infiltrator, and Soldier, can use their special powers to either rush the creature head-on or slowly approach it without being seen. Before doing so, burn through as many Husks as you can and clear a path.

Once you're close enough, take cover behind the ridge directly below the creature and open fire on it with your most powerful close-range weapon, such as the M-300 Claymore.

#### CAUTION

Ravagers also spawn swarms, dangerous little creatures that swarm around you when unleashed. Keep a lookout for them on the ground; they can decimate your shields/barriers in certain situations.

### APPROACH 2: LEFT FLANK

An alternate approach is to leave your squad behind cover at the entrance, near where you dropped down, and dash up the right side of the caverns. While the Ravager concentrates its fire on the squad, you can blast past the Husks on the right and use the large pillars as cover.

The pillars will hide your approach from the Ravager and let you get directly next to its left side. Equip a powerful weapon and pop out, gun blazing. If you're an Adept, use damaging powers like Incinerate to set it ablaze.

With the Ravager out of the way, burn through the next few spore pods and webs until you reach a tall cavern with a Reaper door blocking the way.

In one compartment of the tall cavern, you'll find a door blocking the way; in the other is a Reaper Node. Use the Firestorm or other weapon to destroy the node, and the door in the other side will slide open. With the door open, you can burn the web and continue searching for the central chamber.

As soon as you burn through the web blocking the way and pass through the doorway, a cave-in seals you inside the new cavern with no way to backtrack.

The next section of the cavern immediately splits into two paths—one below a bridge and another that runs beneath the bridge. Both lead to the same place, but the lower path has less spore pods to destroy. Scorch a path under the bridge with your Firestorm leading the way.

#### ITEM REQUISITION

Just along the left wall of the cavern, after the bridge, is a large web. Burn it to find a **Reaper Tech** drop. Pick it up and gain a few credits. Just a few steps down from the Reaper Tech is another small niche in the wall on the left. You'll find this niche behind webbing, next to several spore pods and cables on the ground. Burn the webbing to find a **Krogan Corpse** behind them. Search it to find a note for his lover on the Citadel.

## THE HALL

Shortly after finding the Krogan Corpse, you'll come upon a large hall. Drop down into the hall and prepare yourself for battle—several Ravagers, Husks, and Cannibals rush out and attack. Luckily, the cavern provides plenty of cover.

### APPROACH 1: UP THE MIDDLE

The first, rather blunt, approach is to sprint up the middle of the watery area and immediately take cover behind the small ridge. From here you can spot every Reaper that runs your way, and you can order your team to attack specific foes. You'll also have plenty of decent cover from where to launch your counterattacks.

When the Ravagers come to view, use a good medium- to long-range weapon and open fire. Powers such as Warp and Incinerate are great here since you don't have to get too close to the Ravagers and expose yourself to incoming fire. Since the Ravager is perched across a long chasm, you can't rush it from here. Instead, focus on bringing it down with long-range attacks while your squad helps keep the other Reapers at bay.

## APPROACH 2: FLANK LEFT

Instead of rushing up to the small ridge ahead of you, direct your squad to take cover there while you sweep around the right side of the cavern. You can execute a similar flanking maneuver on this Ravager as the first approach. In this case, however, you're also separated by a large chasm once you round the right edge.

Dash around the right, past another large pillar, and surprise the Ravager from its left side. A few well-placed blasts of your shotgun and it'll come down quickly.

### ITEM REQUISITION

Just after the short drop into the Ravager encounter turn to your left and follow the wall until you find the **Shotgun Shredder Mod** next to a Krogan corpse.

## APPROACH 3: SWING LEFT, SEND THE SQUAD RIGHT

Another approach is to split up from your team and pinch the Ravager from both sides. Send your squad up the path on the right, while you leap up the small ridge and dash left. Take cover behind the rocks with the Barrier Engine and quickly destroy it. This way the Reapers in the room won't be able to replenish their health or shields.

Once it's gone, edge out of cover so you can see the Ravager on the chasm's other side. Order your squad to attack it, then leave your cover to attack in concert with your squad.

When the next wave of enemies rushes out, led by another Ravager, quickly take cover near the center of the area, just beyond the chasm. Wait for the Ravager to amble out far enough for you to pick it apart and open fire on it. The Ravager isn't alone, so either use a few strong power combinations on them or allow your squad to take out the Cannibals and Husks while you fell the Reaper beast.

#### ITEM REQUISITION

Continue walking deeper into the cave and go down the slope on the left. Before you descend, pick up the **Shotgun**

**Spare Ammo** on the left. Drop down to the next level and quickly eliminate the spore pods nearby. Behind the pods on the left is more **Reaper Tech**. Farther down the path, after jumping over a small gap, you'll find the **Ariake Technologies Shoulder Guard** armor. Grab it on the way up the path.

Continue exploring the cave, being careful to not detonate any gestation pods in the way and climb up the ridges to the next section of the cavern. Dagg will radio you asking for immediate help; his company is trapped and being overrun. When you see the battle, make a left and enter the next section of the caverns.

#### NOTE

At this point, there is the option to press the **Point of View** button to see a cool scene if Grunt is present.

Stop at the Reaper Node and open fire on it. This drops the first wall and allows the krogan team to join you. Dagg and his team managed to fight their way to the same chamber you're in; now you can combine your forces in search of the missing scout team. He opts to hold this position to give Shepard time to enter the central chamber and finish this one way or another.

#### ITEM REQUISITION

There is a **Med Kit** and a **Pistol Piercing Mod** just behind the Reaper Node. Grab them before you leave Dagg and his team.

## CENTRAL CHAMBER: AREA 1

Just beyond this small chamber is a narrow passage. Examine it and slide through into another massive cavern. This is the central chamber. Before you can venture all the way in, however, the Reaper walls rise out of the ground and block you in.

Look up and to the right to locate the Reaper Node high along the wall. Open fire on it and force the left wall to open.

### APPROACH 1: SLIDE LEFT AND RIGHT

As soon as the wall drops, a group of Husks comes rushing out. Obliterate them quickly, then take cover behind the central pillar. You'll be able to spot the Ravager and other Reapers in the distance from here, but you'll need to slide left and right, in cover, to see around both sides of the pillar.

The pillar's right side provides you better cover, but at the cost of a direct line of sight to the Ravager. Stalk the right side to whittle down the number of Husks and Cannibals while you sic your squad on the Ravager from the left.

Once you've dwindled the Reapers' numbers, slide left and join your group to open fire on the Ravager from afar. Lay down a steady stream of attacks, be they power combinations or long-range weapons like the sniper or assault rifle. After you've eliminated it, rush up to the node and destroy it.

Turn back around after destroying the node and begin backtracking toward the next room. There's a Firestorm nearby. Pick it up before you return, and let the fire cleanse the path of all Husks and Cannibals in your way. If you need a little extra insurance, send your squad ahead of you to soften them up and follow them with the Firestorm at full torch. Stop at the ridge just beneath the Ravager and open fire on it from close range.

Repeat this maneuver again on the next wave of enemies, just before reaching the chamber with the next Ravager. Destroy the Barrier Engine first, then turn your attention to the Ravager to finish it off.

## APPROACH 2: FLANK LEFT

Since the pillar's right side allows you better cover, send your squad left to distract the Ravager while you rush up the right. Round the corner and pounce on the creature from its left flank with a close-range weapon. Vanguard's can use Biotic Charge to close the distance quickly, but all other classes (except perhaps the Sentinel) should maintain cover before and after their flank attack.

After destroying the node, turn around and return to the previous chamber. You'll be met by another swarm of Husks and Cannibals. Use powers to slow them down. Singularity, Shockwave, Nova, and Stasis are all great skills to use on the creatures as they rush toward you.

Open fire on them once they're made vulnerable, or follow up with another power like Cryo Blast to detonate the Biotic-affected enemies.

When you reach the next Ravager, rush its left side again (your right) and take cover behind the nearest pillar. Let your squad handle the other Reapers while you focus on the Barrier Engine. With the engine down, turn to the Ravager and finish it off.

Lastly, destroy the final Reaper Node and rush back to the main chamber. You'll encounter one more group of Reapers, but you've got the height and cover advantage. Take position near the top of the ridge and open fire on them below from your covered position.

Concentrate on the Ravager first, then pick off any remaining creatures. Lure the next Ravager down to the lower area as well and wait for it to get in your kill box (the area where you can concentrate all of your squad's fire). When it does, let loose and finish it off.

## RACHNI ABOMINATION

The cavern is clear of all Reapers but one. You find a massive Rachni abomination chained to the cavern floor by the Reapers. Unlike the previous Rachni leader, however, this is no queen. Instead, it is a Reaper-created monstrosity that was made for the sole purpose of creating Swarmers and Ravagers.

Left to fend for itself, it pleads for your help. Free it, and it promises to help you in the war against the Reapers; leave it chained to the cavern, and it will be destroyed by the hordes of ravagers it can no longer control.

If you choose to save it, the krogan team will be decimated. If you leave it, the krogan team survives.

### PREVIOUSLY IN MASS EFFECT

If you've imported a save where you allowed the rachni queen to live, then she will be present here in place of the rachni abomination.

## A QUESTION OF WAR

This is one of the first critical decisions you'll have to make that affects the Galaxy at War. There is no right or wrong answer, but your choice does affect more than just this mission.

- » If you choose to save the Rachni, the krogan team will be decimated leaving them less effective as a war asset.
- » If you choose to leave the Rachni, you'll lose the Rachni as a war asset but will gain the krogan team in its place, minus Dagg.

### PREVIOUSLY IN MASS EFFECT

Dagg will never survive the run from the caverns. If Grunt is present, however, he has a better chance of survival if you leave the rachni queen/rachni abomination to die. If Grunt survives, he becomes a Galaxy at War asset.

## ACT 1-PRIORITY: TUCHANKA

The genophage cure is a success, but it must be synthesized and dispersed across all of Tuchanka using the Shroud tower. Land on Tuchanka and get Eve safely to the tower.

## MISSION BRIEFING

**Battlegrounds:** The ruins of Tuchanka are surprisingly intricate and ornate for such a strong warrior species. Just as you might expect, though, they also make for great, dynamic battlegrounds.

The first major battle takes place before, then after a bridge. Players skilled in flanking maneuvers can take advantage of the complex ruins, while power-heavy players can appreciate the wide-open spaces with little to get in the way of projectiles.

**Consequence Overview:** This mission is full of complex choices that can alter the war. Nearly every conversation you have from the beginning of the mission to the final bit of dialogue is laden with some amount of Paragon/Renegade consequence.

Early on you'll be faced with a dilemma. The salarian Dalatrass Linron will present you with a proposition that can have very dynamic results. To complicate matters more, your actions between the beginning of the mission, when she speaks to you, and the final decision point at the end of the mission can alter your Paragon/Renegade leaning.

## WAR PREPARATIONS

You're about to take a big step in the war-preparation efforts, and the following mission will change the course of the war and give shape to the Alliance fleet that helps fight the Reapers. Take a minute to do your rounds on the Normandy and speak with several key people.

If you'd like to get straight to the next mission, skip to the "Cure the Genophage" section.

### SPEAK WITH SPECIALIST TRAYNOR

Stop by the CIC and visit with Specialist Traynor. If you're interested in potentially sparking romantic interest, now is a good time to show interest in how she's acclimating to the Normandy.

If you saved the Rachni during "Attican Traverse: Missing Scouts," you can also check your private terminal for a message from Admiral Hackett. He sent you an e-mail about the Rachni and their strange behavior. Read the e-mail, then go speak to Specialist Traynor again to get some insight on the Rachni's communication methods.

### SPEAK WITH LIARA

You can also visit with Liara before this next mission. She's been hard at work trying to recruit new engineers to help build the Crucible (what the Council is now calling the Prothean weapon). If you've also completed other missions in between, there might be some available upgrades you can purchase at the Intel Terminal.

Finally, check out the Shadow Terminal to get some intel on key players in the war. Liara has e-mails from everyone from Admiral Anderson to Admiral Hackett.

The conversation with Liara quickly turns personal, so be mindful of your responses if you want to pursue a romance with her.

### SPEAK WITH DR. MORDIN AND THE KROGANS

Stop by the medical bay to find Dr. Solus speaking with Eve, the female Krogan. When Wreav arrives, the conversation gets a bit heated. Either support Wreav or talk him down to generate Renegade or Paragon points.

### PREVIOUSLY IN MASS EFFECT

If Mordin is dead in your imported save, then this will be Padok Wiks. Similarly, Wreav can potentially be Wrex instead if he survived the events of *Mass Effect 1*. If you destroyed Maelon's data in *Mass Effect 2*, then Eve will occasionally cough and Mordin or Padok will warn you her health is faltering and there's nothing they can do about it.

### VISIT THE CITADEL

Now is also a good time to complete lingering Citadel missions. If you left any missions incomplete or have items/intel to turn in to people at the Citadel, stop by and complete them. The experience points and potential war assets are great to have sooner rather than later.

### CAUTION

#### Spoiler Alert

Now is an especially good time to complete Citadel Quests since it will undergo a massive change in the next mission. The next time you try to land at the Citadel, you will be drawn immediately into the next mission.

## CURE THE GENOPHAGE

Nothing is ever easy, especially when the Reapers are involved. As you approach Tuchanka, you find that the Reapers have unleashed a poison on the planet using the Shroud. That means you cannot land the shuttle near the Shroud and will need turian help to launch a two-pronged assault.

While the turians attack from above, the Wreav's krogan units will attack from the ground. The combined assault of the turian and krogan forces will draw the massive Reaper away from the Shroud tower. When it moves away, Mordin and Eve can head to the Shroud facility and synthesize the cure.

Before you depart, you get an emergency communication from the Salarian Daltrass. She proposes an alternate solution to the genophage cure that will undoubtedly have long-lasting repercussions. Speak with her and weigh your responses heavily. The Daltrass's suggestions may sound harsh, but they're not without merit.

Once you're on the shuttle to the planet, you'll have three opportunities to either reveal the Daltrass's suggestions to Eve or keep them to yourself (the first opportunity takes place during this conversation; the second takes place later, during an early part of the mission; and the final opportunity takes place at the base of the Shroud tower if you didn't reveal the sabotage earlier). All of your conversation responses carry Paragon/Renegade implications, so be sure you mull the Daltrass's suggestion over carefully.

### TIP

#### Spoiler Alert

If you're undecided about what you will do when the time comes, consider making a decision before your first response to Eve in the truck. If you reveal the sabotage early, in the truck, you cannot be devious later. Once the sabotage is revealed in the truck, Mordin/Padok will always sacrifice themselves, curing the genophage. At that point, they can't be stopped. You can only be devious and murder them if you don't reveal the sabotage to Eve in the truck. The truck choice is the pivotal one. Conversely, you can choose to be a Renegade during these conversations and choose to do what seems to be the "right" thing. In the end, your choice should be in accordance with whatever outcome you want for the greater war.

### NOTE

If you spoke to Lieutenant Tolan (or Kirrahe if you saved him during *Mass Effect 1* and imported a save) during the "Priority: Sur'Kesh" mission, his words may now carry a bit more weight. Ultimately you should do what you want to get the desired war asset, but there's plenty of reason to stop and give it some real thought.

## DEFEND EVE

As soon as the shuttle touches down, you're greeted by hordes of Husks. Rush down the stairs and order your squad members to cover behind each corner of the platform ahead of you. While one covers left and the other covers right, you can hang back by the base of the stairs and safely pick off any Husks that get past them.

Secure the landing area and a rival, older clan of krogan arrive from the nearby temple. Needless to say, tensions immediately run high, and it's up to one person to calm them both down and unite them—Eve.

Her peaceful, yet stern tone quickly defuses the situation, but under the promise of a better fight, united against the Reapers. Support the female krogan and resume your mission.

### PREVIOUSLY IN MASS EFFECT

If you imported a save from *Mass Effect 1* and have Wrex instead of Wreav, the rival is Wrex's brother, Wreav, who never rose to power to become clan leader. If you don't have Wrex with you, then Wreav did rise to power and is now in your party. So your choice in *Mass Effect 1* on how to handle the Wrex argument on Virmire made a big difference!

## THE RUINS

En route to the Shroud, you engage Mordin and the krogans in another conversation about the genophage and its long-lasting effects on the krogan species. During this conversation, Eve asks you again what is on your mind. This is your second opportunity to come clean on the Dalatrass's suggestion or keep quiet and make your final decision later in the mission.

Regardless of what you ultimately decided to do, this decision also yields Paragon/Renegade points, so choose wisely. When the transport stops, you step out to investigate.

### TIP

You may be tempted to speak right away with the krogans guarding the transport. Feel free to do so, but do not speak with the krogan standing by the edge of the highway. Speaking to him will trigger the next sequence. Instead, scavenge the area for weapons and other useful items.

## ITEM REQUISITION

Before speaking to the krogan guard, roam the immediate vicinity to collect everything you can. Near the stalled

transports, you'll find a **Med Kit**, a **Shotgun Smart Choke** upgrade, a **Pistol Magazine** upgrade, a **Pistol Melee Stunner** upgrade and a **Death Mask**. The guard standing off to the side, by the railing, has a **Graal Spike Thrower** and another **Med Kit**.

The delay in the transport throws off the timing of the coordinated attack. Unfortunately, it is too late for the turian forces to alter their course. They've committed to the attack and cannot pull back. As the air assault unfolds in the distance, a turian ship gets swatted out of the sky and launched toward your stalled location. The explosion forces the krogan transport to move forward while you find an alternate route to the Shroud.

Locate the entrance to the ruins and go inside. Leap over a small gap to reach the entrance. Your flashlight will automatically turn on; when it does, turn left.

Upon dropping into the ruins, you can either go straight to find a slope leading down and to the left or you can make an immediate left and drop down into a pitch-black cavern. The immediate left is the quickest way down, and you'll appear directly in front of a small chamber. Go inside to find krogan glyphs depicting some ancient ritual. Examine the glyphs, then backtrack out of the small chamber and follow the left wall.

Follow the left wall to find a slope leading deeper into the ruins. Make a sharp left at the base of the slope and enter a small chamber with another krogan painting on the wall. This one depicts a large, ancient creature that may be the cause of the tremors you're currently experiencing.

Backtrack out of the small chamber and make a sharp left. This time, you'll find a short tunnel with another ancient painting along the right wall. Examine it, then keep walking down the tunnel around a right corner to find a fallen Ravager at the base of a staircase on the tunnel's left side.

Examine the fallen creature, then sprint up the stairs to the ruins' exit. The ruins sprawl out, leading up to a bridge in the distance, but before you can set foot on the bridge, a large group of Reapers attacks.

## THE BRIDGE

The path leading up to the bridge is wide open, save for a few large pieces of rubble. A massive structure along the area's left side sits inside a large depression. While this depression can be dangerous if you get pinned inside from above, it can also provide you a great route along the left side of the massive structure for sweeping maneuvers.

### APPROACH 1: RUN THE RIGHT RIDGE

The first approach is to keep the squad lined up along the right ridge of the ruins and rush the Reapers near the bridge. Order your crew to take cover behind the pillars along the right side while you pick off enemies from afar using weapons fire or power combinations.

Engineers can also sic a combat drone on an enemy in the area's far left corner to draw fire that way and create a little more breathing room along the right side. When the combat drone engages the enemy, push up the right side and put more pressure on the Reapers. Adept players can also use power combos like Singularity and Stasis to create destructive bottlenecks along the right side. This will keep enemies at a distance while allowing your squad to advance toward the bridge.

Soldiers and Infiltrators can rely on an increased damage bonus to their weapons and can use sniper rifles to pop the Ravagers first, leaving the lesser enemies, like Cannibals, for last.

### APPROACH 2: SWEEP LEFT, SURPRISE

If you prefer a more indirect approach, leave one squad member, preferably a long-range battle expert like Garrus, near the right ridge. Lead your other squad member left, around the large structure, and sweep around the back of the Reaper group.

If you're an Engineer, you can distract the group with a combat drone near the right ridge, then sweep around the structure's left. Once you're in a good position behind the Reapers, rush out and overwhelm them with fire and power combos.

If the Ravager is putting up a fight, hit it with a power to weaken it, then follow up with shotgun blasts to its unprotected sacs. Destroy all of the Reapers in your way, then rush across the bridge to the next battle.

## BRIDGE CROSSING

After crossing the bridge, you come upon an open courtyard. Stop before completely crossing; instead, take cover at the small partition near the bridge's far end. This will give you a great vantage point of the whole courtyard.

### APPROACH 1: HUNKER DOWN

The area near the bridge's end actually provides plenty of great cover for you to hunker down behind and pick off enemies. It may not be a flashy technique, but it is a solid approach against a head-on assault.

When the Cannibals begin to pour out of the far end of the courtyard, they'll inevitably begin walking in your direction. Stay behind cover and slowly pick them off as they approach.

During the second wave, a Brute rushes out with a handful of Husks and Cannibals. Focus on the speedy Husks first. They're capable of closing the distance first. Use Powers to slow down Cannibals and distract the Brute, while you eliminate all Husks.

Once they're down, turn your attention to the Brute and begin diminishing its health. If you're a Vanguard, use your Charge or Nova to knock it off balance while your squad attacks it. The Cannibals can wait for last since they're the easiest to distract. Drop one Cannibal, then pick off the others as they rush to feed off their fallen friend.

### APPROACH 2: SPREAD OUT

The area beyond the end of the bridge, just on the outer edge of the courtyard, is a great place to spread your squad and create a wall of fire and power attacks. This may sound like Approach 1; however, you'll need to engage the enemy a bit more in close-quarter combat since they'll take less concentrated fire as they approach.

The benefit to this approach is that you'll have more space between you and your team, so if you need to become mobile, you can rush from one position to another and redirect the enemies, splitting their attention as a result. So while you may have to melee a few foes here and there, you'll have less enemies to contend with individually.

When the Brute arrives, focus all of your squad members' attacks on it so they draw its attention. When it does, sweep out of your position and attack it from behind to finish it off.

## FALLEN RUINS AREA

Make a left at the courtyard's far end and follow the path down and around to another wide-open space where the ground has given way and the ruins have fallen. Across a small chasm is a large passageway. Rush up along the left wall as the Reapers slowly pour out of the passageway, and order your squad to take cover atop the small steps along the left wall.

The protective ridge around the small platform is great cover, and the platform has the perfect vantage point to see all Reapers coming from the passageway directly across from it.

Keep one squad member on each side of you to protect the entrance to your platform while you take the center position and obliterate all of the Reapers from your perched position. Focus on the Ravagers first, then help your team sweep up the remaining Reapers around the area.

### TIP

If you don't want to face the Ravagers and the other Reapers at the same time, then hold back. By doing so, the Ravagers won't appear and you can take out the other enemies. This is slower but much safer, as you can concentrate on the Husks and Cannibals first. Once the Ravagers come out, then run up to the platform, tell your squad to stay on the floor to distract the Ravagers, and start taking them out.

Go through the passage onto the next bridge. As you do, the ground begins to shake and your fears are realized: A monstrous creature speeds by, slashing through the bridge as it chases the krogan transport unit. The tremors you've been feeling *are* due to the humongous thresher maw you saw depicted on the ruin's ancient walls.

Rush across the bridge and turn right at the other side. Go around the structure until you reach a large memorial.

## MEMORIAL

The memorial is a round structure with a central pillar. Cannibals stalk both the far left edge of the structure as you enter, so take cover and wait for them to begin approaching you.

### APPROACH 1: HEAD-ON ASSAULT

There aren't many foes here to begin with, so a simple head-on assault should be enough to take the first wave down. Rush the memorial's far left edge and duck behind the small partition as soon as you begin to encounter Marauders and Husks. If any are standing on the other side of the partition, use a covert takedown to eliminate them quickly. Otherwise, send in your squad, then follow behind them to clear the area.

### APPROACH 2: WORK IN STAGES

Take out the Cannibal to the right and move up to the cover that he was behind. Order your squad to move up, but stick to your left and take out the remaining Cannibals. Bring your squad into the open but do not move!

Take out the Marauders and ignore the Husks, letting your crew eliminate any Husks near you with melee attacks. Once you deal with the Marauders, take out the remaining husks.

#### ITEM REQUISITION

Examine the left edge, just behind the partition to find an **SMG Scope** mod upgrade. Go down the stairs, cross another

small bridge, then immediately turn left again to find another weapon mod. This time you'll find an upgrade to your assault rifle, the **Assault Rifle Extended Barrel**.

## THE SHROUD

Continue following the path down and around until you reach a small, stepped drop. Hop down to catch a ride with the krogan transport unit, and ride the transport all the way up to the base of the Shroud. The Reaper is still in position since the two-pronged assault failed. But the female krogan has a plan.

Eve explains that the tower has two large maw hammers that can be used to summon the thresher maw. If you activate them, the thresher maw will come and attack the Reaper.

While you do that, the krogan accompanying you can fend off attacking Reapers, and Mordin Solus, along with Eve, can rush to the facility and finish synthesizing the cure.

### TIP

The conversation with the group before summoning the maw can yield Paragon/Renegade points. Just as you might expect, if you respond positively, you'll get Paragon points; if you respond negatively, you'll get Renegade points.

Several Cannibals block off the path ahead. They aren't too much of a threat, so dispatch them however you see fit, then rush up the stairs on the left side. Take the stairs all the way up and make a right.

### ITEM REQUISITION

Just before turning right at the top of the steps is a new weapon to add to your arsenal. Pick up the **M-5 Phalanx** before proceeding.

The path continues up and around, up to another bridge where you can get a much better view of the Reaper. Before you can cross the bridge, the Reaper lets loose a dangerous laser blast that halves the bridge and sends you plummeting to the area below.

You're now in the direct line of fire of the massive Reaper's laser cannon. Immediately take cover near the closest structure and keep an eye on the laser cannon. Wait for it to blast, then leave your cover and rush up the long pathway toward the base of the Shroud.

The reaper will continue to blast away at you, so duck behind cover every chance you get. If it even glances you, you can lose all of your shields and some of your health. Time your movements so you are dashing between blasts, and always move from cover to cover; never stop in the open. Never leave cover while your shields are depleted, and only move when the coast is clear.

Eventually, the turian attack squad rejoins the fight and takes some of the pressure off of you and your squad. Take advantage and make a mad dash to the central area just beneath the Reaper.

## ACTIVATE THE MAW HAMMERS

Your main goal is to activate the two hammers. One is on the far right; the other is on the far left. Before you can approach them, though, large Brutes attack you. You can fight the Brutes, but the Reaper also continues to make things difficult by stomping around. You will take massive damage from being stepped on, and less damage if you are near the feet. Two direct hits from the Reaper's stomp will kill you.

### TIP

**Watch out for the Reaper's first stomp: If you get hit by this, you could wreck your chances of surviving the rest of the ordeal.**

Instead of engaging the Brutes, focus your squad on the nearby enemies while you sprint past them at full speed, and make a beeline to the first hammer on the left. The Reaper will try to stomp you as you approach it, but it'll miss and only slow you down temporarily. Activate the left hammer, then sprint past any Brutes in your way toward the far right hammer.

The courtyard between you and the next hammer may make things a bit tricky, but you'll be fine if you slow down only to readjust your course, then sprint again. If you try to engage the Brutes, all of them can potentially gang up on you and end your mission. Instead, focus on the second hammer and sprint toward it. Activate it and the thrasher maw comes just as Eve planned.

Eve's plan worked. The thrasher maw destroys the Reaper and allows you to rush to the facility and rendezvous with Mordin and Eve. By the time you arrive, Mordin has synthesized the cure, but Eve has passed away. She had insisted on proceeding with the cure and it cost her her life.

### PREVIOUSLY IN MASS EFFECT

If you imported a *Mass Effect 2* save where you'd completed Mordin's loyalty mission, "Old Blood," then Eve survives the procedure and Mordin is able to save her and create the cure. If Eve survives, then the final funeral scene in this mission will be replaced by a different cutscene where she thanks you for your help.

## CURE?

Now comes a critical decision. During this encounter with Mordin, you must choose whether to let him cure the genophage as planned or to follow the Salarian Dalatrass's suggestion and let the krogan believe they are cured but instead sabotage the cure. The decision doesn't come easy, but the potential outcome of both decisions will shape the war against the Reapers in far-reaching ways.

There are three possible outcomes:

1. If Wrex is the krogan leader, then you cannot persuade Mordin to walk away and trick the krogan. You must either let him cure the genophage for real and sacrifice his life doing so, or murder him to sabotage the cure.
2. If Wreav is the krogan leader and Eve died, only then can you persuade Mordin to walk away and trick the krogan into thinking the genophage was cured. You can also murder Mordin, or let him go up the tower and sacrifice himself to cure the genophage for real.
3. If Wreav is the leader and Eve survives, then you cannot persuade him. You must either let Mordin sacrifice himself to cure the genophage for real, or murder him to stop him, thus sabotaging the cure.

If you get option two (the default option for people who don't import a game save), you'll either have to convince (Paragon) or force (Renegade) Mordin into fooling the krogan that they've been cured. While the decision may be deceitful, you'll gain the krogan and the salarian fleet as war assets. If you peacefully convince Mordin to allow the genophage to persist, he'll eventually realize it was the right thing to do, and you also gain Mordin as a war asset as he then diverts his attention to building the Crucible.

If you cure the genophage, you'll gain the krogans as allies and War Assets, but at the cost of salarian support. The decision to allow the genophage to continue may not be an easy one, but it is a great example of how things are not always black and white.

### NOTE

#### Spoiler Alert

If you sabotaged the cure and Wrex is the leader, he will not know about your treachery during this mission. However, he will find out later and confront you on the Citadel about it, after you speak with the asari councilor and accept the "Priority: Thessia" mission. In that confrontation, you will be forced to kill Wrex. The krogan therefore will not support you in the end.

If Wreav is the krogan leader, he will never find out you sabotaged the cure and will always think it was cured for real.

## A WARRIOR'S FAREWELL

In a touching show of reverence, the remaining krogan lay Eve to rest in a warrior's funeral. Comment on the ceremony in accordance with your Paragon/Renegade leaning to acquire a few more points.

### NOTE

As stated above, this scene only happens if you didn't import a save from *Mass Effect 2* where Maelon's data is kept.

## DREAM SEQUENCE 2

Shepard's dreams aren't getting any easier. He's faced some tough decisions, and the consequences of his actions have had rippling effects across the entire galaxy. But perhaps no decision has haunted him more than the one he made in Vancouver, during the Reaper invasion.

Once again, you have control of this dream sequence, but you don't have to do much. Simply follow the child as he runs from place to place until the dream ends.

## ACT 2—PRIORITY: THE CITADEL

The Citadel is under attack by Cerberus forces. Work with Commander Bailey to stop Cerberus and protect the Council.

www.primagames.com

Prima Official Game Guide

MISSION BRIEFING

**Battlegrounds:** Battle on the Citadel can be as varied as the Councilors who make their residence here. The C-Sec landing zone is divided into three lanes of approach, which means multiple tactics are available. The lanes are long, making them a great playground for sniper-proficient classes.

In fact, many of the other battle arenas are suited perfectly for snipers and for one specific enemy encounter (an Atlas) that can be a lot of fun for skilled sharp-shooters, so bring a sniper rifle along even if you don't fancy it as a go-to weapon.

The later levels of the Presidium, along with the plaza, are also long, narrow battle arenas with plenty of niches, nooks, and crannies for decent cover. Engineer-class players can make great use of their Drones against two new enemies, while other close-quarter combat specialists will appreciate the narrow halls.

**Consequence Overview:** There are two main conversations during this mission that offer Renegade/Paragon opportunities. The first is a minor conversation with Commander Bailey. He'll fill you in on the situation, and your responses will dictate whether you earn Paragon/Renegade points.

The second, far more important instance, is a heated encounter you have with an old friend. During the final phase of this mission, you'll have to convince your ex-ally (either Kaidan or Ashley) once and for all that you're not still working with Cerberus.

During this second conversation, you'll also have to decide to take action against your old friend or not. Your decision will affect whether you can recruit them into your squad, so be prepared to make some big decisions.

## AROUND THE GALAXY

### Mission Unlocks

Citadel: GX12 Thermal Pipe (page 363)

### Mission Locks

Grissom Academy: Emergency Evacuation (page 338)

Tuchanka: Bomb (page 343)

## WAR PREPARATIONS

You've secured the aid of a turian fleet by enlisting the krogans to help on Palaven, the turian planet. Your actions may have also brought the salarians (if you chose not to cure the genophage) or the resurgent Rachni (if you chose to help the Rachni creature). Now you're being called back to the Citadel to speak to the Salarian Councilor.

If you'd like to get straight to the next mission, skip to the "Visit the Citadel" section later in this guide.

### SPEAK WITH ENGINEER ADAMS

Chief Engineer Adams needs a part that may come in handy on the ship. If you have the time to help him out, you can acquire it on the Citadel.

### UPGRADE WEAPONS

The next act will shift focus away from the biological organisms like the Reapers and reintroduce old enemies that are more susceptible to electric powers and plasma-based weaponry. So consider upgrading weapons that complement electricity-based combat. Also, if you have go-to weapon, now is a good time to upgrade it as well.

### SPEAK WITH OTHER CREW MEMBERS

Even though you may not be able to engage them in long conversations, you can still stop by and speak with James, Specialist Traynor, and other crew members. They won't engage you in conversations worthy of lengthy dialogue trees, but they will reveal bits and pieces of their thoughts, feelings, and other musings.

### NOTE

Since the current mission requires you to visit the Citadel, you have no choice but to visit there. As soon as you arrive, you'll engage in the mission, so any Citadel-based missions will have to wait until after this one.

### COMPLETE GRISSOM ACADEMY: EMERGENCY EVACUATION

This may be your last chance to complete the Grissom Academy mission. If you engage this mission and have not completed it yet, you'll be unable to complete it afterward.

### COMPLETE TUCHANKA: BOMB

If you completed "Tuchanka: Turian Platoon," then completed "Attican Traverse: Krogan Team," then this will mark the third mission since acquiring "Tuchanka: Bomb." If so, then this is also your last chance to complete "Tuchanka: Bomb" before it is no longer available.

## REASSIGN POWERS

If you haven't done so already, now is also a good time to reassign powers. This isn't mandatory, but if you find that you're using certain powers more than others or some not at all, then reinvest those points in a power you will use more.

Another reason to respect your powers is to prepare for the new enemies you'll be facing in the next few missions. You'll still face Reapers and Cerberus foes, but you'll also have to contend with the geth as well. Powers like Overload, Disrupter Ammo, and other tech-leaning powers are going to be very useful.

### TIP

If you haven't reassigned your powers yet, then you can do so now, for the first time, for free. Every time after that, you'll have to pay an increasing amount of credits with every power reassignment.

## VISIT THE CITADEL

You've been called to the Citadel to meet with the Salarian Councilor, but as you approach, you find that the Citadel is under Cerberus attack. Rather than land near the embassies, your new destination is C-Sec headquarters. Commander Bailey's distress signal sounds frantic; if the C-Sec HQ falls, so does the Citadel.

Lieutenant Cortez deftly maneuvers the shuttle near the C-Sec HQ and drops down as a battle rages on.

### Previously in Mass Effect

If Thane is alive and you've spoken to him, he will impart the necessary information here rather than Bailey.

## C-SEC HQ LANDING ZONE

The LZ is hot as Cerberus forces fiercely engage and quickly overwhelm C-Sec forces. As your shuttle touches down, you find that the area between you and the Citadel entrance is full of Cerberus soldiers. The area splits into three paths, however, allowing you several different methods of attack.

### TIP

Vanguard players can use **Biotic Charge** to dash across any lane and instantly reach the far end. To keep from being overwhelmed with fire, order your squad to distract the enemies from any one lane, then pinch the foes from behind. Follow up with Nova and charged melee attacks to keep the Cerberus goons off-balance while your team picks them apart.

Sniper-proficient classes, on the other hand, like Infiltrators and Soldiers, can use their range advantage from any of the three lanes. Use your squad as bait while you safely pick off all enemies from the base of the landing area.

## APPROACH 1: ONE PER ROUTE

Since there are three long avenues leading up to the Citadel entrance, you can assign one route to each of your squadmates and take the third for yourself. The left lane offers a raised vantage point with little cover, the center lane is guarded by a turret at the far end, and the third lane on the far right has more cover but has several tough enemies stationed at its far end.

The Soldier and Sentinel classes are comfortable with close-quarters combat and can take a fair amount of damage, so they are best suited for taking the center lane. Use the small partitions as cover, and use close-quarter takedowns whenever possible. Otherwise, focus your fire on the turret at the far end while your two squadmates rush up the left and right lanes, taking care of business from above.

If you get pinned by the turret, order your squad to attack the turret and take off some of the pressure. When they do, rush to a better position and attack. You'll face several Combat Engineers and Centurions along the way, but if you spread your squad out evenly across all three lanes, then the number of enemies each of you faces should be manageable.

### CAUTION

No matter which approach you take, don't rush into the Centurion's smoke grenades. It may be tempting to do so under the assumption that they can't see you, but the turret's targeting system may track you a bit if it catches you out of cover.

### TIP

If you feel that your class is not as well equipped to go down the center aisle, you can assign a squad member with more firepower, such as James, while you rush up one of the other two lanes.

## APPROACH 2: LEFT LANE

Direct your squad up the far left lane and begin spreading out across its entire length. This way, you and your team can gain a view of the other two lanes and gain a height advantage on the center lane. With a clear shot across both lanes, pick off all enemies, starting with the turret, then focus on the Combat Engineers.

Stay behind cover as much as possible, and send your most powerful squad member, if it isn't you, to the front of the lane while you take the center. This way, you lead with the strongest member and flank the turret if needs be.

### TIP

It can also be a good idea to take out **Combat Engineers** first, as destroying their turret will cause them to start repairing it, or even drop a new turret down if you destroy one—that is, of course, only if you can't move quickly enough after taking out the turret.

## APPROACH 3: RIGHT LANE

The right lane has several shield generators near the far end that provide extra protection for duck-and-cover tactics. If you rush up the right lane immediately, you'll have to take down the Combat Engineers near the far end, and they'll use the shield barriers for protection as well.

A high-powered Concussive Shot will deplete the shields entirely, leaving the Cerberus fighters exposed. Take them down quickly, then rush the shields. If you need cover from the remaining enemies, reactivate the generators to bring the shields back up, then get return work.

Clear the area, then speak to Commander Bailey, who's been injured in the firefight prior to your arrival. He took one in the gut, but he'll survive. Bailey grants you access and, while at the computer terminal, finds a clue as to why Cerberus may have attacked the Citadel.

The Salarian Councilor is in danger, and you're the councilor's only hope. Leave Bailey behind while you set out to the Executor's office to find the Councilor.

## C-SEC LOBBY

Pass through the double doors and enter the C-Sec lobby. You'll get the jump on two Assault Troopers near the lobby's far end, so take them out quickly. If you pounce fast enough, they'll be down before they even know you're in the room. However, this will alert the other Cerberus troops up the stairs on the left, so take cover behind the couches.

### APPROACH 1: LIE IN WAIT

Wait for the Guardians to begin slowly marching down the stairs, and either fire through the vision slots in their shields or use a power like Singularity, Pull, or Shockwave to knock their shields off; then open fire. If you have Frag Grenades, you can use them to knock their shields off as well. You can also shoot the Guardians' knees as they descend the stairs.

With your entire squad behind the couches for cover, the Guardians will have a lot of ground to cover before they can reach you. Once the two Guardians are down, rush the stairs and overwhelm the Combat Engineer.

Another fun tactic is to use a combat drone on the Guardian. If you cast a combat drone on the Guardian itself, the drone will appear behind them, and it will cause them to turn around and attack it, exposing their back to you.

### APPROACH 2: AMBUSH

If you don't want to wait for the Guardians to come to you, order your squad to take cover near the bottom of the stairs and cut the wait short. As the Guardians approach the top of the steps, your team can begin whittling them down and potentially finish them off.

This tactic is especially effective if your squad members can dish out a lot of damage quickly. Crew members like James and Garrus can put down Guardians with Carnage and Concussive Shot, respectively.

Go up the stairs and rush the Combat Engineer. You can outgun him easily now that you have superior numbers.

#### ITEM REQUISITION

Shortly after going up the stairs, examine the counter on the right side of the reception area. Pick up the **Med Kit** and

**Assault Rifle Piercing Mod** mod before the next wave of enemies comes crashing down on you from above.

Shortly after going up the stairs, a small group of Assault Troopers will drop in from the level above you. Rush your squad to the room's rear and open fire on them as they descend. If you get to the rear quick enough, the Assault Troopers won't have enough time to get a shot off and they'll fall dead to the ground.

#### TIP

Examine the C-Sec corpse in the room and the terminal on the counter to get a hint of how the Cerberus attack unfolded.

Enter the next room, one that is flooding under an active sprinkler system, and slowly approach the center table. A Guardian stands with his back to you at the hall's opposite end. This is a perfect time to pounce on another unsuspecting enemy and eliminate him before he knows you're in the room.

When the Guardian drops, a Centurion comes rushing into the room from the distant hall. Open fire as he approaches and send a squad member to attack from the room's left side. Simultaneously send your other squad member up the short flight of steps on the right and have him engage the other Centurion and Combat Engineer in the far right corner.

If your second squadmate has trouble, take cover behind the partition on the right and lend him a helping hand. Tackle the turret in tandem and use power combos or grenades to quickly dispatch the machine gun.

#### ITEM REQUISITION

This room is jam-packed with valuable items. Begin by collecting the **Recon Hood** on the counter along the left

wall. Then open the door on the left and enter the restroom. Inside you'll find an **M-76 Revenant**, a **Locker** with some credits. There's also another C-Sec corpse in this room to examine. Finally, exit the restroom, back into the flooded room, and exit through the hall at the far end. As you go, open the **Medical Station** and clean it out.

As you travel down the hall, look left to find a Combat Engineer working on a wall console. Take him out quickly, then shoot the console's latch to unlock it. When the lid opens up, activate the switch inside the console to unlock the elevator door.

# ITEM REQUISITION

There is a weapon mod sitting on the shelf to the left of the wall console. Pick it up to get the **Sniper Rifle Extended Barrel**.

Get in the elevator and take it to the next floor, where you'll find another short hallway in shambles. There is a terminal against the far right wall; check it out before you move on.

# ITEM REQUISITION

Along this area's right wall is a **Pistol Piercing Mod**. Grab it, then examine the dead body near the center of the hall. The officer was carrying an **M-25 Hornet** that you can now pick up.

Turn right at the hall's end, and use the small room to circumvent the malfunctioning door. This leads to another hallway with two Cerberus soldiers with their backs to you. Rush them and silently eliminate them if you can. Vanguard's can use Biotic Charge, Soldiers have Adrenaline, and Infiltrators should use their Tactical Cloak. All other classes can sprint up and use a charged melee attack on one, followed by a close-range headshot on the other.

Make a left at the hall's end. When you enter the next area, you see the Executor's office at the far end. On the right is a kitchen area with a small dining section to its left.

# ITEM REQUISITION

After going around the malfunctioning door, examine the terminal nearby to get some credits. The terminal also unlocks the door to a room in the previous area, along the back left wall, that contained a **Datapad**, and the **M-358 Talon**. A **Securitel Helmet** and **Pistol High-Caliber Barrel Mod** can be found in an open room next to the locked one.

Hop over the small partition into the kitchen area on the right. Examine the counters to find some **credits**, then open the **Medical Station** on the wall.

Take cover behind the wall separating the kitchen from the dining room. This spot gives you perfect cover and a great view of the incoming Assault Troopers and Centurions on the far side, near the stairs. Order your squad to take cover behind the wall with you or in the dining room outside. Engage the enemy, then rush outside the kitchen and position yourself behind one of the tall supports in the hallway.

By taking cover in the hall, you get a better view of the enemy and can stop them more quickly from attempting to flank you via the hallway. Your squad members in the kitchen and dining room can freely engage Cerberus, split their fire, and create an opening for you to either rush in close and blow them away or obliterate them from your position.

# ITEM REQUISITION

Open the **Medical Station** on the far wall just before entering the Executor's office. The desks at the far right corner of this wall also contain a **Sniper Rifle Piercing Mod**.

Finally, go through the far door and up the stairs, and enter the Executor's office. The area is full of dead bodies, and the Councilor isn't inside. When you look out the window, back down on the dining room area below, you see the Councilor come out from her hiding spot.

Before you can reach her, however, a strange man interferes. He threatens to kill the Councilor, and you rush down in time to hold him up. As the Councilor's life is being threatened, she reveals some shocking information about Councilor Udina.

Suddenly, the strange man, an assassin, releases a blast from his palm that tears through the Councilmember. He quickly turns around and runs. He jumps atop a speeding shuttle that will probably take him to his next target—the rest of the Citadel Council. The Salarian Councilor was correct about Udina: He's working with the assassin.

#### PREVIOUSLY IN MASS EFFECT

If Thane is available and you've spoken to him on the Citadel already, Thane will be killed instead of the councilor. If not, and Kirrahe is alive, Kirrahe will be killed instead of the councilor.

You hop into a shuttle and give chase, but the assassin pounces on your car midflight and disables it. The shuttle crashes into the Presidium.

#### THE PRESIDIUM

When your shuttle crashes, you stop on the Presidium. If you've spent any time in the Citadel, then you know the Presidium's layout. The long hallway is broken up by plenty of planters along its left side that provide great cover. The right edge of this floor overlooks the rest of the Citadel, so you're better off sticking to the left. Farther down the long hall, along the left side, are also two sets of stairs that lead up to a small perch.

#### APPROACH 1: PLAY IT SAFE

You're facing brand-new enemies in this encounter. Phantoms are devilishly fast and slippery, so don't rush out like you might against other enemies. Stay behind the planters for cover and use powers to slow them down or knock them off balance. Soldiers can use Adrenaline to slow time and follow up with grenades or headshots to inflict major damage. Adept players can also use Stasis or Singularity against these tricky foes, but you'll have to follow up with destructive powers like Cryo Blast to inflict maximum damage. With the Phantoms gone, you can focus on the Assault Troopers and Nemesis troops.

Nemesis troops are sniper specialists, capable of causing major damage from down the hall. If you maintain cover near your landing position, you'll have a difficult time nailing them from afar (unless you're a sniper-proficient class as well). When the Nemesis arrive, dash from cover to cover, up the hall, and get within close range to eliminate their advantage. Hit them with strong close-range weaponry and powers to eliminate them quickly.

## CAUTION

Phantoms are also capable of delivering fatal blows if they can get you or your companions into melee range.

## TIP

You can try to shoot the weapons out of their hands to "defang" the phantoms, but this requires exceptional marksmanship abilities.

After leaping across the small gap into the next section, order your crew to take cover behind the parked shuttle on the left and behind the planter on the right. This area is much more cramped, so your best bet is to keep cover and spread your forces as much as possible to cover as much ground as you can.

When the Phantoms attack, they'll be forced to attack one of you, while the other two can open fire on it from close range. If the Phantoms take cover, flush them out and put them down. Once again, when the Phantoms are eliminated, you can turn your attention to the remaining Nemesis and Assault Troops.

## APPROACH 2: CREATE A BOTTLENECK AND FUNNEL

An alternate approach to this battle is to force your enemies to go where you want them to. If you allow the Phantoms and Assault Troopers to roam freely, the Phantoms will rush you quickly while the Assault Troopers pick you apart. Instead, use powers like Singularity near the center of the hall to create a bottleneck in their travel path. This will force your enemies to either avoid it and take a more indirect route toward you or get caught up in the Singularity's field.

Other powers like Throw can work similarly by hurling enemies into others and redirecting them. When the path ahead of you is clear of Phantoms, rush up the stairs on the left and follow them around to a flanking position behind the Nemesis troops. You'll get the jump on them and put them down quickly.

After leaping across the small gap, once again use Singularity or a similar tactic (combat drones can also work here) to block one path from the Phantoms. If you place the Singularity near the far left side, enemies will be funneled into the right side where you can greet them with heavy fire.

Finally, with the Phantoms out of the way, rush the Nemesis and Assault Troopers near the rear of the area to flush them out. Nemesis soldiers will attempt to get a better position as you approach, so either pick them off as they move, or focus on the Assault Troopers in the meantime.

Drop down at the hall's far right end and turn left. Follow the series of windows and ledges up to the top floor. Pick up the **credits** on the ground as you travel across the outer edge of the Citadel, then reach the next floor of the Presidium, Shalmar Plaza.

## SHALMAR PLAZA

Shalmar Plaza is not much different than the previous section of the Presidium you were in. It is only slightly longer and lacks the parking bays on the left side. Instead of encountering Phantoms and Nemesis soldiers, however, you're greeted by a massive Atlas mech.

### APPROACH 1: COVER IN THE SHOP

The shop on the left-hand side provides plenty of cover for your entire squad. From here, you can safely take the brunt of the Atlas's attacks while getting a decent view of the other enemies nearby. If you want to spread out your forces and divert the Atlas's attention away from your crew, then take cover out by the planters on the right side of this floor while they deal with the enemies surrounding the Atlas.

Your squad may occasionally take fire from the Atlas, but if you keep the pressure on and stay out in the hall, then the Atlas will focus primarily on you. While it does, direct your squad's fire on the other enemies and take them all down.

### APPROACH 2: HIJACK THE ATLAS

An alternate approach is to take the Atlas for yourself. Equip a sniper rifle and focus all of your fire directly on the Atlas's cockpit. If you get nothing but direct shots on the glass, eventually it shatters and leaves the pilot exposed.

Train your weapon the pilot and open fire. A few solid shots from your sniper and he'll die, leaving the Atlas open for you to take control. Rush the Atlas and hop inside, then turn it on the rest of the enemies nearby.

Go up the stairs on the plaza's left side and open the door. You'll reach the elevator in time to see the assassin get in with a group of Cerberus troops. They're after the rest of the Council, so you hop into another elevator shaft, landing atop a stopped elevator.

Bailey activates the elevator you're on and you go speeding after the assassin in the hopes you reach the Council first.

Change to a close-range weapon and prepare to engage the enemy in tight quarters. Despite Bailey's attempts to slow down the assassin, he still manages to stay ahead of you a bit. When you come up on his elevator, fire on the power conduits at the bottom of his ride to slow him and his goons down.

When the Phantom car pulls up next to you, take cover behind your power conduits and unleash a blast of your close-range weapon (preferably a shotgun) or hit it with strong power combinations. At this range, you'll be able to eliminate them quickly and potentially knock them off the elevator car.

## TIP

Power conduits can be shot on top of the Phantom's elevator, causing it to fall and prevent combat with the enemies inside.

Shortly thereafter, another car will pull up next to you with three Assault Troopers. If you're behind cover, you can deal with these soldiers quickly and easily. A few headshots or a well-placed grenade does the trick. Once again, shoot out the power conduits on the next car and slow the elevator carrying enemies down a second time. Put down the two Assault Troopers that zoom in from above, then jump onto the top of the next elevator car, the Council's car, when it pulls up.

## PARANOIA AND BETRAYAL

You finally manage to catch up to the Udina and the rest of the Council, and they escape their elevator car, running toward a shuttle transport. Your ex-comrade, either Kaidan or Ashley, is now in charge of their protection and carefully escorts them to their shuttle.

However, when they see you exit the elevator with your weapon drawn, you immediately become suspect number one. The following conversation between you and Kaidan or Ashley not only grants you Paragon/Renegade points, but also determines whether they will join your squad for the remainder of the game.

If you've visited them in the hospital, brought gifts, and kept a positive open line of communication with them, they're more likely to trust you when you try to convince them that Udina is the enemy, not you.

When the time comes, you'll have to choose whether to shoot your ex-comrade or talk them down. Shooting them will eliminate them from the game, and you'll be unable to recruit them. If you talk them down, you'll also get a Renegade opportunity to shoot Udina as he attacks the other Council members. If you allow the Renegade opportunity to pass, your ex-comrade will shoot Udina in your place.

### NOTE

All of the above are the assumed default events if you didn't import a save from previous games. If you did import a save, then, when facing off with Ashley or Kaidan, you may face a friend who does not need convincing, a reluctant ally who needs a hard- or maximum-level persuasion or intimidation to bring over to your side, or an enemy that cannot be convinced. It all depends on how you have treated Ashley or Kaidan in the past three games.

Factors that help win them over include:

- » Saving the Council in *Mass Effect 1*
- » Romancing them in *Mass Effect 1*
- » Acknowledging their fears on Mars about you helping Cerberus (*Mass Effect 3*)
- » Visiting them in the hospital and speaking with them often
- » Staying true to them in *Mass Effect 2* (not romancing anyone else)
- » Being honest or apologetic about any rival romances you had in *Mass Effect 2*
- » Taking the Paragon or Renegade Interrupt in this conversation
- » If Thane or Kirrahe kept the Salarian Councilor alive, Udina has no doctored footage to show to Ash or Kaidan

In the end, your efforts to save the Council succeed, and Udina's traitorous actions are exposed. You lose track of the Cerberus assassin—he escaped when he saw that C-Sec was operational again—but you're certain to get another opportunity to take him down.

### NOTE

This mission ends on the Citadel, so you're free to resume any Citadel missions you may still have. This also marks the third phase of the Citadel (post-Cerberus attack), so you may find new missions to pick up.

## ACT 2-PRIORITY: PERSEUS VEIL

The quarian fleet offers both technical specialists and support ships to assist with the Crucible. Meet with the quarian admirals and obtain their help in the war effort.

## MISSION BRIEFING

**Battlegrounds:** The geth Dreadnought was not designed for the comfort of organic creatures, so don't expect a lot of space to move around. The geth ship is full of narrow catwalks, perhaps because the machine species can move efficiently with no need of extra space, and there is little cover, so expect a lot of head-to-head battles.

In the few rooms that offer a wider battle space, you have plenty of options for battle tactics. You will be able to engage in everything from roaming firefights to carefully constructed power-based traps used to funnel enemies around.

The geth don't have the same self-preservation instinct as organic creatures, so be prepared to engage foes in close-quarters combat (CQC). Bring squadmates that can either engage in CQC or have great complementary powers such as Overload. In fact, EDI is a great squadmate to bring along since she's also a machine. She will provide great insight and will bring unique powers that are perfectly suited for this mission.

**Consequence Overview:** Before you set out on the mission, you'll engage in a critical conversation with both Admirals and Liara that yield Paragon/Renegade points. It won't alter the course of the war or dictate who is on your squad, but your responses will affect your Paragon/Renegade leaning.

During the mission, you'll also encounter a unique Geth VI that is in need of help. Your decision to either trust it or remain cautiously skeptical will yield more Paragon/Renegade points.

Finally, once you're back on the Normandy, the last conversation of the mission will place you in a tough spot. The conversation will begin to forge an alliance with one species or another. You won't see the effects of this alliance right away, but you will gain Paragon/Renegade points in the meantime.

### PREVIOUSLY IN MASS EFFECT

The Geth VI can be replaced by Legion if you imported a save where Legion is still alive.

## WAR PREPARATIONS

In a time of war, few would've suspected one of their own would turn on them. The salarian Councilor did, and the cost was her life. Luckily, you and your squad were able to put down Udina's Cerberus allies on the station and return control back to C-Sec. In the aftermath of the assault, you've gotten word from the Admiralty that the quarians have offered assistance in the war.

If you'd like to get straight to the next mission, skip to "Speak with Quarians" section later in this guide.

### CITADEL MISSIONS

The attack on the Citadel marks the next shift in the Citadel mission structure. The aftermath of the attack has left a lot of people in need and looking for answers. Since the last mission ended on the Citadel, take some time to explore the Citadel and pick up all new missions to complete.

Some missions, such as "Citadel: Inspirational Stories" or "Citadel: Medi-Gel Sabotage," can be completed in a matter of seconds after acquiring them, so check every level of the Citadel and keep your ears open for new mission objectives.

### CITADEL AMBIENT CONVERSATIONS

The Citadel is a busy place. At any given moment, there are people engaged in heated conversations. If you've listened to them on previous visits, then now is a great time to stop by and listen to them again. If you've passed by enough times, many of these conversations will have progressed to a point where you can interact by supporting one person or another.

Your involvement in these conversations will often garner Reputation points, so be sure to stop, listen, and give them your two cents.

## SPEAK WITH JOKER

Joker and EDI are taking some time off at Purgatory on the Citadel. Stop by to speak with Joker and continue your conversation with him from your first visit. At this point, he's begun giving more serious thought to the possibility of a relationship with EDI. You can either encourage or discourage him from doing so.

## SPEAK WITH JAMES

If you spoke with James in your private cabin earlier about his N7 prospects, now is a great time to visit with him again at the Citadel. You'll find him in the lower docks near the refugees.

## RECRUIT KAIDAN OR ASHLEY

If you built up your trust with Kaidan or Ashley while they were hospitalized, and then convinced them that you're not with Cerberus during the Udina incident in the last mission, you can now recruit them for your squad. Before you return to the Normandy, you find your friend waiting for you near the Normandy's entry hatch. Speak with your friend and convince them to come on board the Normandy instead of staying behind.

## SPEAK WITH THE ADMIRALS, THEN LIARA

Back on the Normandy, you immediately communicate recent events with the Admirals. Admiral Anderson also shares some information on the assassin Kai Leng. They have history together and now so do you. In the meantime, the asari and salarians have both completely pledged their support to the cause, and work on the Crucible is coming along nicely.

The scientists working on the Crucible still have questions, but at least they've been able to confirm that it can cause an extensive amount of damage. The only missing key at the moment is a mysterious component called "the Catalyst." Scientists believe this is the key to controlling the weapon and directing it at the Reapers.

Shortly after speaking with the Admirals, Liara relays a message from the asari high command. They don't relay much information, but it's clear they'd like your help. Your conversation with both the Admirals and Liara play out as one long segment, so keep your replies consistent, as this conversation segment will yield Paragon/Renegade points.

## SPEAK WITH SPECIALIST TRAYNOR

There are numerous conversations to be had aboard the Normandy once you return. Specialist Traynor has several conversation options, one of which is a mission that can yield War Assets. If you spoke to her earlier about her fondness for games, you can also engage her in a private conversation in your cabin.

Check your e-mail to find an invitation to Game Night from her. To accept her offer, go to your private quarters and invite her up. If you're a female Shepard, now is your chance to make the relationship a romantic one. If not, you'll have a humbling conversation where she politely turns you down.

## SPEAK WITH GARRUS

Garrus is silently contemplating the people you have lost just outside the elevator on the crew deck. Stop by to speak with him. He'll ask about your actions on the Citadel and will share his own thoughts on the matter. You'll gain Reputation points for the conversation.

## SPEAK WITH DR. CHAKWAS

Dr. Chakwas has a mission for you as well. Speak to her to get more information.

## SPEAK WITH DIANA ALLERS

Diana Allers can also have a private conversation with you in your quarters. If you've already started flirting with her, engage in a favorable interview with her to take the flirtation to another level. You won't be able to spark a romance during this conversation, but you'll take one step closer.

## SPEAK WITH QUARIANS

When you meet with the quarian representatives aboard their ship, they explain that they have engaged the geth again and their fleet has been pinned by an enemy geth Dreadnought. Even though the quarian representatives are too busy infighting, they do agree on one thing: They need your help. Your next mission is to disable the geth Dreadnought and help free the quarian fleet.

Whether they attack once they've been freed or retreat is yet to be determined, but one thing is for sure—the geth are not working alone. They've been bolstered by the Reapers through a signal that is controlling the geth. To make matters worse, the geth have been upgraded with Reaper technology.

The quarians have brought back Tali, another old friend, to help in your assault. She immediately joins your squad and bolsters your crew's abilities with her own unique powers.

### NOTE

If Tali is dead or was never recruited due to an imported save, then Admiral Xen will help in the mission.

## SPEAK WITH TALI

After speaking with the quarreling quarians, you can take a minute before triggering the mission to speak with Tali in your private cabin as well. She needs to get a lot off her chest, and you're a familiar face. Speak with her and either encourage her or give her your cold assessment of the situation. This conversation will yield Reputation points and is a great place to start if you want to resume a romance with her.

### NOTE

Tali only appears if she's alive from the last game. Players who do not import a save will recruit a Tali who is alive but was exiled from the fleet. Also, you can only romance Tali if you romanced her in *Mass Effect 2*, so you can continue a romance but not start one.

### TIP

This is likely the first time you will have Tali in your squad. Level up Tali depending on how you want to use her. To actively use her powers against enemy defenses, **Energy Drain** and **Sabotage** are excellent against shields and synthetics. To bolster Tali in combat without worrying too much about power use, put points into **Combat Drone** (which can be destroyed but attacks enemies at range) or **Defense Drone** (which stays close to Tali and attacks enemies that come into range). Tali's passive power boosts the effectiveness of her powers and shields.

## DISABLE THE DREADNOUGHT

When you're ready to help the quarians, fly to the geth Dreadnought and dock. As you approach, you find that there are hundreds of ships engaged in battle near the Dreadnought. Despite that, Joker manages to dock you safely, but the docking area is not quite safe yet.

Before your squad can join you, venture out the long docking tube and cross it until you get into the geth ship. Once inside, you can secure other docking procedures for your two crewmates.

The long tube isn't dangerous, really, but it is dark and creepy. Walk left and right, around the inside of the tube (you're in a zero-gravity environment, after all), until you reach the parts of the tube that will let you advance. If you reach a gap, walk left or right again until you find a place without a gap. The easiest way to cross is to keep your eye on the lights on the inside of the tube and follow them.

### TIP

There's a nice view of the geth Dreadnought, as well as a look at the planet of Rannoch through a hole in the umbilical tube. Take a minute to check them out as you make your approach.

### ITEM REQUISITION

Once you make it inside the geth Dreadnought be sure to follow the path to your left and drop down onto a smaller catwalk to pick up the **Shotgun Smart Choke**.

Inside the geth ship, drop to the lower area and edge around the right side of the debris-filled room. Hop on top of the metal beam and follow it to its end. There you'll find a ladder leading up to a door on the right. Go inside to find another airlock, then climb the ladder on the right to find the docking control. Prior to activating the docking controls, there is a Geth Data pickup on the console standing on the catwalk leading to the docking bay air lock. Activate them and let the rest of your squad into the geth Dreadnought.

## ITEM REQUISITION

After Tali unlocks the next doorway, look down at the item she points out. It's an **Arc Pistol**, a weapon that

is highly effective against the geth. Pick it up and equip it for the duration of the mission. Inside the next room, just right of the GUARDIAN Battery, is a weapon mod. Pick up the **Sniper Rifle Enhanced Scope** before proceeding.

## NOTE

If Admiral Xen joins you in place of Tali, she gives you the gun as well, but remains behind and is primarily in radio contact throughout the mission.

Activate the GUARDIAN Battery computer on the left, then follow the walkway right, to the bridge controls. Activate them as well before you run into a group of well-armed geth.

Immediately take cover and wait for the geth to reveal themselves on the walkway's other side. If you or your squad has Disrupter Ammo, equip it now. When the geth Rocket Trooper comes up to shoot, use powers like Overload or Singularity to disable it. If you don't have those powers available, open fire and then quickly take cover again.

The geth Rocket Trooper fires very dangerous and speedy rockets that can instantly deplete your shields if you're not careful. Take out the first few geth, then head down the walkway. Make a right and open fire on the next geth group before they attack.

Always focus on the geth Rocket Troopers first, since they pose the most danger, then sweep the area for the regular geth Troopers. Engage the geth Troopers in melee combat; it's not one of their strengths, so make it one of yours.

## TIP

Highly skilled sharpshooters (though not necessarily snipers) can nullify the geth Rocket Trooper's greatest strength by shooting their rockets out of the air. If you're fast enough, you can even shoot the rocket when it's nearest to the enemy and inflict damage on the geth Rocket Trooper.

Drop down the ladder on the walkway's right side and you'll land a few yards behind another geth Trooper. Melee combatants like Sentinels, Soldiers, and Vanguarders can make very short work of this unsuspecting foe, while other classes can easily take aim and fire at the back of its head to drop it quickly.

As soon as you do, you'll alert the other geth nearby. Take cover near the railing and send your squad ahead of you, farther down the hall. If you've brought EDI along, use her Overload ability to temporarily stun the geth Rocket Trooper and unload on it first while its shields are down. Otherwise, powers like Singularity and Shockwave will help too. Lay down a constant stream of pressure on the geth and keep them suppressed as much as possible to allow your squadmates to inflict some punishment on them as well.

## CAUTION

This area also has proximity mines that you can destroy; if you don't, they blow up in your face and knock you back, which can be critical during a hard fight.

Examine the signal console along the right wall to learn more about how the Reapers are controlling the geth. There is also a sensor console on the left wall that may provide some valuable information.

#### ITEM REQUISITION

Farther down the hall, shortly after making a left, look to the console on the left to find some **Geth Data**. Enter the next room

and check the computer on the right. Atop the computer is an **Archon Visor**. Grab it before you go.

The next room has a network console that you can examine.

#### ITEM REQUISITION

This next room holds a **Geth Pulse Rifle** on a shelf on the right. Pick it up and equip it—but only if you don't already have a more powerful assault rifle.

## DREADNOUGHT OPERATION CENTER

Enter the next room, the Dreadnought Operation Center, to find a cloaked geth accessing a computer terminal at the far end. Its cloaking device flickers for a bit, but before you can reach it, the geth disappears again somewhere into the room. At that point, the other geth turn their attention to you.

### APPROACH 1: SPREAD THE SQUAD

As soon as the geth notice you, they immediately begin rushing you and your squad. Spread out your squad along the back end of the operation center and maximize your team's firepower. Use grenades and other explosive power combinations to take out the geth Troopers.

Keep your eyes peeled for visual distortions to give away the position of geth Hunters as they fearlessly approach you, then hit them with a projectile to reveal their position. As soon as you temporarily disable their ability to cloak, focus all of your team's powers and firepower on the Hunter to quickly overwhelm it.

If you have grenades, use them near other geth soldiers to inflict some damage. The concussive sphere of the explosion can also help reveal nearby Hunters. Vanguard players can use Nova as well if a geth Hunter is approaching; the radial shock wave will instantly knock back and reveal the cloaked enemy for others to fire upon.

By keeping your squad stationed together, near the rear of the room, you can anticipate the geth's approach from the room's opposite side. This will also cause the geth to use the side halls to attempt flanking maneuvers where you can ambush them with power combos and explosives.

### APPROACH 2: WORK THE PERIMETER

An alternate approach is to lead your squad around the room's perimeter. As you round the room, use powers and grenades to redirect and funnel the geth away from you while your team depletes their health. As you move around the perimeter, you force the geth to redirect and chase you.

Staying on the move gives you more time to inflict damage and gives them less opportunity to rush you as they are wont to do. Keep moving around the room's perimeter, staying behind cover as much as possible, and carefully pick off the geth as they give chase.

Engineer players can complicate things even more for the geth by unleashing combat drones to distract them as you skirt the room. If you brought EDI, her Decoy power can also distract enemies.

As you work the room's perimeter, keep your eyes trained on the center of the room in case you manage to funnel the majority of enemies out into the open.

#### ITEM REQUISITION

Before you activate the computer terminal at the room's far end, pick up the **SMG Scope** and the **Geth Data**.

Once the room is clear, examine the data console near the room's center, by the entrance, then activate the Operation Center console near the room's far end. The console brings up the ship's schematics and allows Tali to plan the team's next attack. She tricks the ship into thinking there is a thermal warning and unlocks all of the doors to the room, clearing a path to your next stop.

Before you can go, though, you must contend with the geth waiting on the door's other side. When the doors open, the geth pour in from the room's opposite side and the ceiling. Once again, take cover and prepare for battle.

As soon as the geth rush into the room, begin directing your squad toward the far left corner, where the now-open door provides an exit. Use similar tactics during your escape as you would in Approach 2 and keep the geth moving. The only difference now is that as you move, you'll encounter geth directly in your way, as opposed to behind you.

If you send your team ahead of you, hang back a bit and wait for the geth to open fire on your squad. Surprise the geth with fire of your own and shred them quickly. If you're an Adept player, use power combos on multiple enemies at a time and maximize your damage output.

If you've equipped the Arc Pistol, this is the perfect time to familiarize yourself with it. Charge shots as the geth take cover and release the trigger when you've got them trained in your sights.

Open the second door in the room's far left and enter the next room. Follow the catwalk around the left until you find a ladder, then drop to the next level.

Continue dropping down until you reach the bottom floor, then enter the next room, the Main Gun Battery. Enter the room and make a left. Follow the walkway down and around to a long hall that acts as a charged firing tube.

#### ITEM REQUISITION

After you drop down two levels, examine the console along the left wall to find some **Geth Data** you can salvage. On the bottom floor, just left of the exit door, is a **Med Kit**. Open it and claim its contents before entering the next room.

## MAIN GUN BATTERY: ENTRANCE HALL

The entrance to the Main Gun Battery is a long hall that constantly fires a dangerous, highly charged electric field. If you or your squad get caught in the blast, it'll obliterate your shields. To make matters worse, the entire length of the hall is swarming with geth Troopers and geth Rocket Troopers. Your shields will deplete with a hit of the electric field, but theirs won't.

### TIP

Carefully time your movement and your attacks in between the gun battery's firing pattern. Wait for the distinct discharge sound that denotes the shock wave has been released; when you hear this, take cover, then pop out of cover as soon as the shock wave passes you.

### APPROACH 1: SNIPE

As with most long hallways, sniping from a distance is one of the best approaches available. Equip your best long-range weapon and wait for the enemy to show its face. When it does, take aim and open fire. In this hall, things become a bit more complicated due to the short window between shock waves. You'll have to fire between shock waves from the main battery, so you'll have to pop out of cover, spot the enemy, zoom in, and pick your shot all in the matter of a few very short seconds.

Use yours or your squad's powers to distract or stun the target before firing; then maximize your fire by concentrating on one target at a time. Look for the ripples in a Hunter's cloak when it is affected by the shock wave, and always make them first priority when you spot them. The Hunters won't stop coming until you make them stop.

If you hang back with the sniper rifle, send your squad slightly ahead of you to cover on the other side of the hall from you. That way, the geth will attempt to reach them first and your squad will weaken the enemy with their fire, leaving you to finish them off from afar.

### APPROACH 2: RUSH

Another tactic is to take a complete opposite approach: Instead of hanging back with a sniper, time your movements carefully and rush ahead with a strong close-quarter weapon, like the ultrapowerful Claymore shotgun. With this approach, the key is to use powers like Singularity, Stasis, and Overload to slow enemies (or Adrenaline to slow down time), then wait for the shock wave to pass you by.

When it does, leave cover and rush the nearest enemy. Hit it with a direct shot from your weapon, then either follow up with a charged melee blow or a second blast to finish it off. As soon as it is down, take cover, reload, and spot your next target.

This approach is especially suited for Vanguard-class players who enjoy using the Biotic Charge, Nova, melee combo to wipe out enemies quickly.

## APPROACH 3: FLANK

If you prefer using more traditional tactics, you can also rush from your cover into some of the winding hall sections that flank the main hall. Rush into the side section on the right or left, and mow down any geth stationed in the U-shaped hall. Use a combination of weapons fire and melee attacks to clear the hall, then aim back down on the main hallway to get the jump on the enemies engaging your squad.

### TIP

The side halls flanking the main hall provide safety from the shockwaves.

If you press the action all the way around the U-shaped hall, you can also flank the enemies in the main hall or pop out from behind them and pinch them between you and your squad.

### ITEM REQUISITION

About halfway down the hall drop down to a lower platform on your left to find a console with **Geth Data** worth salvaging.

Clear a path to the hall's far end and make a left. Hit the Maintenance Override switch to gain access into a short firing conduit leading to the Core and go inside. Sprint across the tube and reach the other side before it charges to completion and fries you.

## MAIN GUN BATTERY: EXIT HALL

This section of the main gun battery, which leads to the Core, is very similar to the previous hall you traversed. It also has a dangerous firing pattern, but has a raised platform crossing over the walkway where enemies like geth Rocket Troopers can perch.

### APPROACH 1: UP THE MIDDLE

Since this long passage has side passages along both sides, plenty of cover in the main walkway, and a platform crossing over the top of the main catwalk, the approach up the catwalk can be a treacherous one. Instead of splitting up the squad across all of the different possible routes, take a more direct, head-on approach to the main hall.

Carefully direct your squad from cover to cover, up the main walkway. When you encounter an enemy on the walkway above, make it your first priority and concentrate all powers and weapons fire on it before proceeding up the catwalk. Stay behind cover and use covert takedowns whenever possible.

The geth will approach your position, so you will have plenty of opportunities to reach over your cover spot, grab your enemy, and put them away with one melee blow. When you reach the platforms in your way, wait for the shock wave to pass you, then climb up the ladders and quickly take cover again before the next shock wave.

Don't climb any platforms if there is more than one enemy still perched there. You can overwhelm one foe, but multiple foes, especially if one is a Hunter or Rocket Trooper, can make things much more difficult. Both Hunters and Rocket Troopers can deplete your shield quickly, allowing the shock wave to finish you off.

### APPROACH 2: SIDE AISLES

If you don't want to take a direct approach, you can also utilize the short U-shaped sections flanking the left and right sides of the main walkway. Direct your squad into the hall's far left side as soon as you enter the main walkway and follow them in.

Lead the squad around the bend and carefully approach the top of the platform that crosses over the walkway. You'll be safe from the shock wave, but you'll have to engage every enemy in close-quarters combat as you reach the top of the catwalk. Switch to a close-range weapon like a shotgun and use powers like Throw, Shockwave, or even Pull to manipulate your enemies nearby.

If there are a lot of enemies on the catwalk, Singularity or Lift Grenade can lift the bunch off the ground and turn the situation in your favor. Wipe out all foes from the catwalk, then drop down to the main walkway's other side.

From here, you can use the side passages on the right to flank the enemy to rush them and engage in close-quarters combat. Lead with direct shotgun blasts or disruptive powers. If you've brought EDI along, use Decoy to distract your foes, or, if you're an Engineer, activate a Drone to help ease the pressure a bit.

Make a left when you reach the hall's end and follow the path up and around. A door on your right side will lead to the next area. Go through the small passage and enter a room with an elevator platform inside.

#### ITEM REQUISITION

Before hopping on the list, check the console on the room's right side to find some **Geth Data** on it. Salvage the data, then get moving.

Activate the platform controls and ride the lift up. Before it can go far, a pair of geth Rocket Troopers blasts your platform and knocks it off its support. Quickly sprint toward Tali on the upper level before your platform gives way and you go down with it. Once you're back on your feet, take the ladder up to the level above you.

#### ITEM REQUISITION

Pick up the **Med Kit** shortly after going up the ladder, then go through the door into the next room.

## CENTRAL CORE

When you finally reach the Central Core, you find a large, spherical containment unit near the center of the room. It is clearly made out of Reaper technology, but it's hard to see what is inside. When you deactivate it, the containment unit retracts to reveal a trapped geth unit.

The geth unit explains that it was created to research the Reapers, but when the Reapers took over the ship, they imprisoned this unit due to its unique and complex architecture.

Your responses to the imprisoned geth will determine whether you accrue Paragon or Renegade points, so respond according to your leaning. If you're quick to trust the geth, you'll gain Paragon points; your skepticism will gain you Renegade points.

### PREVIOUSLY IN MASS EFFECT

If you import a game save in which Legion survived, the geth being imprisoned is Legion. Legion is much friendlier and makes it clear that it opposed the geth allowing the Reapers to control them.

### TIP

You can also go the other way and just quickly take the elevator up to the spot if you want.

### APPROACH 1: OUTSIDE EDGE

#### ITEM REQUISITION

Before setting the geth unit free, turn around to find an **Assault Rifle Precision Scope** weapon mod. On the other side of the room is a bit more **Geth Data**. Salvage it, then continue.

Go up the ladder to the level above and walk left, all the way around the circular platform to a computer console. Activate the Data Core Override console and free the trapped geth. As a gesture of cooperation, the geth disables the Dreadnought's drive core. This, of course, alerts the geth still under Reaper control, and they immediately attack.

As soon as the geth attack, take cover behind one of the nearby pillars. Direct your squad to take cover behind the consoles on the platform's right inside edge, and aim down the circular walkway. The geth Troopers will probably try approaching you using the outside edge of the platform, so shift left behind cover and get a good view of the outside edge.

Use powers like Concussive Shot, Shockwave, or Nova to knock enemies away and keep a safe distance. Leave your squad to cover the inner edge, and engage the geth from that angle. Leave your cover and begin slowly moving along the platform's outside edge. Carefully pick off the geth Troopers and Rocket Troopers, leaving only the geth Prime in your way.

Once the geth Prime is the final enemy, move your squad into position and focus their powers on the Prime. Use Overload, Warp, and other disruptive powers to get its attention, while you follow up with carefully aimed headshots.

A second wave will arrive after you take down the first geth Prime. Approach it the same way as you did the first, leaving the second Geth Prime for last, then clear the room of all enemies.

#### NOTE

As you battle the geth, the quarian Admirals begin firing on the Dreadnought while you're still in it. This will lead to a potentially heated conversation when you wrap up this mission.

#### CAUTION

Watch out for geth combat drones and geth turrets released by the geth Prime. You can quickly wipe them out with a few well-placed shots, so take them out quickly. The longer they're on the battlefield, the more damage they can inflict.

## APPROACH 2: INSIDE EDGE

If you lead your squad around the inside edge of the circular platform, you'll have plenty more cover, but you'll be forced to keep an eye on your surroundings a bit more carefully. Since the geth can use the platform's outside edge, they'll be able to move through it freely and get much closer to you before firing.

Avoid getting ambushed by funneling enemies out of the outer edge and into your line of fire. Use combat drones, Singularity fields, or grenades to make the outer edge a less hospitable place for your foe.

When they come into view near the platform's inside edge, open fire and take them down. You may even be able to use covert takedowns if they attempt to take cover directly across from you.

Once the Geth Prime is by itself, you'll have to rely on well-placed long-range shots to take it down, since it'll probably stay behind cover on the room's outside edge. Once again, use a combination of disruptive powers and weapons fire to take it down and usher in the next wave of geth attackers. Stay behind cover and use the same tactics on the second wave that you used on the first, then clear the room.

The Dreadnought begins to come undone under the quarian fleet's fire, but you've freed the geth, so your mission here is complete. Since the geth don't use escape pods, your only chance to escape the ship before it crashes down around you is to sprint to the hangar and board a fighter ship.

Go down the ladder and sprint toward the door on the left side. Rush out of the exploding ship and keep running no matter what. As the ship explodes, potential pathways will close before you reach them, leaving only one path for escape.

When you reach the long walkway, it'll give out underneath you and send you tumbling down to the lower level. Get up, make a right, and follow the walkway back up to the top level where you'll meet with Geth VI, your new geth ally you just liberated.

Back on the Normandy, the quarians are at each others' throats again. Prior to speaking with them, Admiral Hackett reminds you that the war needs the quarian fleet, so you'll have to do what is needed to secure their help. When you encounter the quarreling quarians, you can either escalate the argument and gain some Renegade points, or play nice and earn Paragon points.

When the quarians see the Geth VI, they immediately begin making plans to dismantle and study it. Your response will give you another chance at Paragon or Renegade points.

#### NOTE

At the end of this mission, both the quarian Admirals and the Geth VI bring up new ways to proceed. Either you can rescue a stranded quarian Admiral or enter the geth matrix on Rannoch in order to proceed in the main campaign. You must do one, but completing one mission won't eliminate the other. The choice is yours.

## ACT 2-RANNOCH: GETH FIGHTER SQUADRONS

Geth fighter squadrons are targeting quarian liveships with attacks that could cripple the quarian fleet. Land on Rannoch and disable the server controlling the geth fighter squadrons.

## MISSION BRIEFING

**Battlegrounds:** Even though you will be wielding a weapon, you won't actually engage in any combat during this mission. You'll be transported to the geth server, so you'll be flying solo this entire mission. You won't have, or need, your squadmates, and you won't face any enemies.

**Consequence Overview:** This is a unique mission where you won't have many interactions or critical decisions to make. In fact, as this mission unfolds, you'll get a new perspective of the quarian/geth war through the eyes of the geth. Rather than affect the future, you will be witness to history.

However, Shepard's final attitude at the end can net you Paragon/Renegade points. The number of points are not affected by the choice you make on the shuttle going down (at the beginning of the mission); they just change the dialogue to reflect what your initial opinion was.

### ITEMS REQUISITION RUNDOWN

None

## AROUND THE GALAXY

### Mission Unlocks

- Rannoch: Admiral Koris (page 238)
- Rannoch: Geth Fighter Squadrons (page 230)
- N7: Fuel Reactors (page 333)
- Athena Nebula: Hesperia-Period Statue (page 364)

### Mission Locks

None

- Citadel: Wounded Batarian (page 368)
- Hades Nexus: Obelisk of Karza (page 368)
- Citadel: Target Jamming Technology (page 367)

## WAR PREPARATIONS

The crew aboard the Normandy doesn't have much to say, but things at the Citadel are still settling down. Miranda Lawson gives you a reason to visit the Citadel, so stop by and speak with her. While you're there, check every section of the Citadel to pick up a few more missions and affect the daily lives of the people you're fighting to save.

If you'd like to get straight to the next mission, skip to the "Geth Comm Hub" section later in this guide.

### SPEAK TO ADMIRAL RAAN

Admiral Raan of the quarian fleet has had enough time to examine the aftermath of the Dreadnought attack. By now, she's seen that the Geth VI's actions may have actually saved the quarian fleet. Still, she's not completely convinced she can trust it. Speak to her about the Geth VI.

#### NOTE

After speaking with the Admiral, decode the scrambled distress call being transmitted next to the admiral in the war room.

### SPEAK TO ADMIRAL ANDERSON VIA VID-COM

Access the vid-com unit to speak with Admiral Anderson briefly. He'll give you a quick rundown of how things are progressing back on Earth and his thoughts on Kai Leng. Your responses to this conversation won't yield any Paragon/Renegade points, but you can accrue some Reputation points.

### SPEAK TO THE GETH VI (OR LEGION)

You won't gain any Reputation or Renegade/Paragon points, but you can speak to the Geth VI and get some more information from it about an upcoming mission.

### VISIT THE CITADEL

There is plenty to do at the Citadel. As life begins to return to normal, the citizens of the Citadel begin to resume old and new arguments. Wander the Citadel and listen for heated conversations. In many cases, you will be able to interject and support one side over another for Reputation points and war assets.

If you travel to the Presidium Commons, you may even find Tali engaged in a debate with a turian diplomat. Just around the corner in the

C-Sec office are two C-Sec officers. If you support the patient C-Sec officer, you may earn Paragon points. Support the angry C-Sec officer and you'll gain Renegade points.

## SPEAK WITH LIARA

If you've been pursuing a romance with Liara, now is the time to speak with her at the Presidium. Find her near the lower shops and speak with her.

### TIP

If you have enough intimacy with her, this is the point where you can ask to be more than friends if you're a new romance, or if you imported a *Mass Effect 1* save where you romanced her, ask Liara if she wants to be Shepard's permanent romance.

## SPEAK WITH KAIDAN OR ASHLEY

Kaidan or Ashley is also located at the Presidium. Stop by and speak with either of them to enjoy some friendly downtime between missions. You'll gain Reputation points, but more importantly, you'll strengthen the bond between you and one of your crew.

### NOTE

This conversation may not be available if either Kaidan or Ashley die during the attack on the Citadel.

## SPEAK TO MIRANDA

Visit your Spectre message terminal to speak with Miranda Lawson. She has some more information about her father and her sister. She suspects that her father may be working with the Illusive Man and that she's being hunted by Cerberus troops. Conclude this conversation and continue exploring the Citadel. You won't gain any Paragon/Renegade or Reputation points, but this activates a series of events that revolve around Miranda and her past.

After returning to the Normandy, Miranda sends you an e-mail that she's ready to speak in person at the Citadel. Return to the Citadel to speak with her. You'll find her in a private room in the upper level of the Presidium Commons. During this interaction, Miranda will ask for Alliance resources. The conversation will shed a lot of light about Miranda's background and her involvement in the Lazarus project. Your responses during this conversation will yield Paragon/Renegade points. Grant her access to the Alliance support she needs and you'll gain Paragon points. Deny them and you'll acquire Renegade points.

## SPEAK TO EDI

EDI and Joker finally take the next step in their relationship, and it may be all due to you. Stop by Purgatory to speak with EDI and see how things are going with the new couple. You'll gain some Reputation points for your support.

## GETH COMM HUB

In order to complete this mission, you must virtually interact with the geth by interfacing with the geth server. The Geth VI has intercepted research conducted by Cerberus on human/geth interfacing, so it's confident that it can facilitate the necessary interface required for the mission. More importantly, however, it requires your trust.

Regardless of how you respond, you'll have to do what it says to complete the mission, so respond in accordance with your Paragon/Renegade leaning to get the points you desire.

Once you're ready, you land on the Rannoch surface and enter the facility shortly after the Geth VI has cleared it out. The interface pod scans you and creates a virtual version of you to interact inside the server, but you have full control.

The server interior looks like nothing you've ever seen, yet somehow looks as you might expect a virtual world to appear. Angular and constructed of cubelike data bits, the server is wide, expansive, and lacks much detail. It's a machine's world.

## DESTROY FOREIGN CODE

The geth server has been infected with foreign Reaper code. This takes the shape of long, orange strings of data cubes that pulsate with information. The infected code creates weblike connections across the server and frequently blocks your path.

Walk down the glowing path to its end, where an orange strand of Reaper code blocks your way. Open fire on the Reaper code to obliterate it, and the path will autoconstruct itself ahead of you, allowing you to proceed deeper into the server.

### TIP

**Always target the bright orange parts of the Reaper code to destroy it. Also, note that the weapon will recharge after periods of inactivity.**

Follow the path down and around to another section of infected code and blast it with your weapon. The dead-end path will turn from bright, blinking red, to a solid light blue as it autocompletes and extends deeper into the server.

Continue obliterating malicious code as you go, and follow the path the server lays out for you. If you reach a dead end, search for a section of the path that is either blinking red, which indicates that you must destroy code to proceed, or blinking blue, which simply requires you to step on it to extend the path farther along.

In some cases, you may have to destroy intersecting (crisscrossing) sections of malicious code in order to proceed. If you do, follow the code strings to the bright orange sections and fire on them, then follow the code to its source to completely obliterate it. Do so with the second part of the intersecting string, and the path will autoconstruct.

The first section completes at a server terminal. Walk into it to be transported into the next section of the server.

As you enter the next area, the Geth VI begins to have trouble communicating with you. It asks you to investigate. There is only one way forward, so get moving. Just as before, begin removing infected code until you reach a large, spherical data cluster covered in malicious Reaper code.

To free the data cluster from the Reaper code, fire on the nodes extending out of the data cluster, out to the rest of the server. Target the node connections and open fire until the code is completely removed from that cluster section.

There are three nodes extending out of the first data cluster. Clear a path around the cluster and remove all of the nodes to free the data transmission.

When you remove the shell of Reaper code surrounding the first data cluster, you can view a streaming bit of archived geth history. The video feed reveals the creation of the first geth nearly 300 years ago. Clear a path to the next data cluster and walk around the massive information archive, clearing infected code as you go.

The next data cluster also has three nodes of infected code attached to it. Circle around the cluster and clear out all three to view the next bit of streaming archived information. This data cluster streams information regarding the emergence of the first geth AI.

Walk up to the next server access node and meet up with the Geth VI. It reveals another archived data cluster; this one is of the first geth that ever took up arms against its creator. As the quarians massacred sentient geth, one machine took a first step toward self-preservation.

Step into the next server node and access the next area. This area contains the final data cluster. As you continue in your mission, the quarians and other members aboard the Normandy begin to worry about your progress. Things are getting rough outside the server. Still, you can't abort, so continue on your current mission and see it all the way through.

By now, the Reaper infection has learned to self-replicate and is counteracting your progress. In this section, simply attacking one section of the corrupted data strings won't be enough. You'll need to destroy a weakened section of the Reaper code earlier in the string before attacking the section of infected code in your way.

Starting at the section of code blocking your path, follow the string back to its origin. When you find another bright orange section of the code in that same string, destroy it, then turn your attention back on the code blocking your path. With the other section of the string severed, the code in your way won't be able to self-replicate and you'll be able to proceed.

When you reach the next data cluster, follow the path around it to the left and turn toward the far left wall. You'll see two missing sections of the wall; each one has a strand of weak Reaper code extending into the distance. Blow away the left weak Reaper code segment, then turn around and destroy the first node of infected code on the data cluster.

The second node on the data cluster requires you to destroy two infected sections of malicious code. Follow the node back to a Y-split in the string and destroy both sections of weakened code along the branching paths. One extends into the wall behind you; the other crosses overhead. Once both are destroyed, turn back to the node on the data cluster and remove it.

Repeat this on the third node on the data cluster; it also has a Y-split along the code string. Remove the malicious code from the data cluster completely.

The final data cluster reveals a critical piece of geth/quarian history. Some of the quarian population didn't agree with the removal of the geth and attempted to intervene on their behalf.

Leave this data cluster and follow the path around to one more corrupted section of code. Just as before, remove infected sections of the string before attacking the nodes on the cluster, and free the data cluster completely. This data cluster shows a piece of geth/quarian history during which the quarians declared martial law.

Finally, follow the path out of this section and back to the Geth VI, near a large sealed data cluster. Walk up to it.

The final data cluster is from 290 years ago. It reveals how the geth spared the quarians as they fled after the Morning War. Meanwhile, in space, all geth begin to malfunction and shut down. Massive geth fighters suddenly go quiet midflight and begin to drift in space.

Your mission was a success. Sprint to the exit point and leave the server. Back on the planet's surface, you reunite with the Geth VI and several huge geth Prime units.

While you were in the server, the Geth VI transferred the geth from the server into the Prime hardware units. The Geth VI convinced the Prime units to help oppose the Reapers in the war. Your responses to this new revelation will yield Paragon/Renegade points, so respond accordingly. If you trust the Geth VI's intentions and accept its help happily, you'll get Paragon points. Do otherwise, and your skepticism will be rewarded with Renegade points.

Back on the Normandy, the quarians, including Admiral Xen, are relieved that the geth are no longer attacking their fleet but remain skeptical of geth Prime's true intentions.

## NOTE

If you want to continue in the main campaign, you can proceed to "Priority: Rannoch" right away. Otherwise, now is your last chance to save Admiral Koris. If you don't complete "Rannoch: Admiral Koris" now, you'll lose the opportunity to do so after completing "Priority: Rannoch."

## ACT 2-RANNOCH: ADMIRAL KORIS

The quarian ship carrying Admiral Koris crash-landed on Rannoch, leaving the civilian fleet without a leader. Land on Rannoch and rescue Admiral Koris.

## MISSION BRIEFING

**Battlegrounds:** Along the winding paths of the Rannoch surface you will encounter an elevated area from where you can ambush enemies below. If you choose to keep the elevated position, you can use sniper tactics or long-range power combos to do the most damage. Otherwise, you can rush into battle and engage the enemy in close-quarter combat in the small campsites.

The AA gun stations provide slightly more complex, if not rigid, battlegrounds. The intersecting pathways of the rectangular arenas allow for great flanking, sweeping, and rushing tactics, depending on your preferred class.

The geth are always susceptible to Overload, Stasis, and other disruptive powers, so teams with EDI and Liara will do well. Tali, a natural fit for this mission, can also contribute if she has the ability to call upon Combat and Defensive Drones.

**Consequence Overview:** Before the mission begins, you'll engage in a conversation with Admiral Xen during the approach. Ease her concerns for Paragon points or express pessimism and a lack of genuine concern for Renegade points.

During the mission, you'll also come across an injured quarian that makes for a Paragon/Renegade encounter. Most importantly, however, your biggest decision will come at the end of the mission. When you find your mission objective, Admiral Koris forces you to make a critical decision that will not only yield Paragon/Renegade points, but will also affect your relationship with the quarians as a whole.

### TIP

#### Spoiler Alert!

If you select the conversation choice asking, "What makes finding the Admiral a priority?" the persuade at the end to bring Koris onto your side will be easier.

## WAR PREPARATIONS

The crew aboard the Normandy doesn't have much to say, but things at the Citadel are still settling down. Miranda Lawson also gives you a reason to visit the Citadel, so stop by and speak with her. While you're there, check every section of the Citadel to pick up a few more missions and affect the daily lives of the people you're fighting to save.

If you'd like to get straight to the next mission, skip to the "Save the Admiral" section later in this guide.

### SPEAK TO ADMIRAL RAAN

Admiral Raan of the quarian fleet has had enough time to examine the aftermath of the Dreadnought attack. By now, she's seen that the Geth VI's actions may have actually saved the quarian fleet. Still, she's not completely convinced she can trust it. Speak to her about the Geth VI.

#### NOTE

After speaking with the admiral, decode the scrambled distress call being transmitted next to the admiral in the war room.

### SPEAK TO ADMIRAL ANDERSON VIA VID-COM

Access the vid-com unit to briefly speak with Admiral Anderson. He'll give you a quick rundown of how things are progressing back on Earth and his thoughts on Kai Leng. Your responses to this conversation won't yield any Paragon/Renegade points, but you can accrue some Reputation points.

### SPEAK TO THE GETH VI

You won't gain any Reputation or Renegade/Paragon points, but you can speak to the Geth VI and get some more information from it about an upcoming mission.

### VISIT THE CITADEL

There is plenty to do at the Citadel. As life begins to return to normal, the citizens of the Citadel begin to resume old and new arguments. Wander the Citadel and listen for heated conversations. In many cases, you can interject and support one side over another for Reputation points and War Assets.

If you travel to the Presidium Commons, you may even find Tali engaged in a debate with a turian diplomat. Just around the corner, in the C-Sec office, are two C-Sec officers. If you support the patient C-Sec officer, you may earn Paragon points. Support the angry C-Sec officer and you'll gain Renegade points.

### SPEAK WITH LIARA

If you've been pursuing a romance with Liara, now is the time to speak with her at the Presidium. Find her near the lower shops and talk to her. Lead the conversation to a more flirtatious and romantic path and she'll respond accordingly.

### SPEAK WITH KAIDAN OR ASHLEY

Kaidan or Ashley is also located at the Presidium. Stop by and speak with either of them to enjoy some friendly downtime between missions. You'll gain Reputation points, but more importantly, you'll strengthen the bond between you and one of your crew.

#### NOTE

This conversation may not be available if either Kaidan or Ashley die during the attack on the Citadel

### SPEAK TO MIRANDA

Visit your Spectre message terminal to speak with Miranda Lawson. She has some more information about her father and her sister. She suspects that her father may be working with the Illusive Man and that she's being hunted by Cerberus troops. Conclude this conversation and continue exploring the Citadel. You won't gain any Paragon/Renegade or Reputation points, but it activates a series of events that revolve around Miranda and her past.

After returning to the Normandy, Miranda sends you an e-mail that she's ready to speak in person at the Citadel. Return to the Citadel to speak with her. You'll find her in a private room in the upper level of the Presidium Commons. During this interaction, Miranda will ask for Alliance resources. The conversation will shed a lot of light about Miranda's background and her involvement in the Lazarus project. Your responses during this conversation will yield Paragon/Renegade points. Grant her access to the Alliance support she needs and you'll gain Paragon points. Deny them and you'll acquire Renegade points.

### SPEAK TO EDI

EDI and Joker finally take the next step in their relationship, and it may be all due to you. Stop by Purgatory to speak with EDI and see how things are going with the new couple. You'll gain some Reputation points for your support.

## SAVE THE ADMIRAL

As you approach the surface of Rannoch, Admiral Xen reached out to you via comm panel. She's concerned about the state of the fleet, as the captains of Koris's fleet are one hair away from complete panic. Speak to her about the importance of Admiral Koris, and either remind her to protect her civilians or give her a cold, tactless reply about Koris's status to gain Paragon or Renegade points.

You quickly lose signal and communication with Admiral Xen is interrupted. Your approach is met with heavy fire from anti-aircraft cannons. You'll have to take out the guns on foot in order for your shuttle to take out the jamming tower. Once the tower is down, communications can resume, and you'll be able to locate the missing Admiral...if he's still alive.

### RANNOCH SURFACE

You can clearly see the geth jamming tower in the distance. Set off down the rocky, winding path toward the tower. Follow the cliffs down and around to a small campsite where you'll make your first enemy encounter.

The geth Trooper has its back to you, so use the element of surprise and take it down quickly. Either use a headshot or a disruptive power like Singularity, then follow up with a destructive power like Warp to detonate it. When you do, several other nearby geth attack as well.

Target the geth Pyro first. It will not hesitate to rush you and set you ablaze, so either take it down quickly or use powers like Shockwave to knock it back. Engineers, or squads with Tali in it, can use combat drones to draw the Pyro's attention, while you shred it with heavy fire.

Clear out the small campsite and examine the quarian corpse by the fire.

#### ITEM REQUISITION

Right next to the fire is a small bit of **Wreckage**. Pick it up, then continue to find a dead geth with more salvage. On the path just outside of the campfire area is a **Javelin Sniper Rifle**. Pick it up and equip it; you'll put it to good use in the next few battles.

#### CAUTION

Keep your eyes to the ground as much as possible. The geth have booby-trapped the area with mines. If you miss one and step on it, listen for the distinct sound it makes as it arms itself and prepares to explode. Execute an evasive dive-roll away from the mine or you'll take damage.

## GETH PATROL

Shortly after picking up the Javelin, you'll come upon an outcropping overlooking another campsite below. As you approach, a small geth troop comes ambling out of the far left corner and begins to patrol the campsite.

### APPROACH 1: POWERS AND SNIPING

If you've equipped the Javelin or have a preferred sniper rifle already equipped, take cover near the small rock atop the outcropping and take aim. Before you pull the trigger, use a complementary power like Adrenaline, Stasis, or Tactical Cloak. Wait for the first two geth Troopers to come directly into view, then open fire.

Use your squad's other powers to attack from afar. Use power combinations and anything that will ease the pressure by distracting foes. Otherwise, send your squad farther down the path to the left and allow your squad to put pressure on them from below while you remain above and pick them off.

If you've brought Liara, equip destructive ammo, hit them with Singularity, and let them have it. Stay behind cover and use the entire length of the rocky partition to get the best view possible. Clear out the entire area before heading down.

### APPROACH 2: AMBUSH

If you prefer a more traditional approach, rush down the path on the left as soon as you enter the area. Don't bother to look for the geth patrol as you come down the path; instead, rush down and order your crew into position. As the geth patrol deeper into the campsite, order your attack.

Begin by singling out the geth Rocket Troopers and focusing the majority of your weapons fire on them. Combine powers, grenades, and close-range weapons fire to eliminate the toughest enemies first. If you like to mix things up in close range, equip a shotgun and send out a defensive drone. As the drone stuns enemies, rush up to them and blast them with your shotgun or hit them with charged melee attacks.

#### TIP

**This can also be a great area for Vanguard players to wreak some havoc. If you wait for the geth Rocket Troopers to emerge from their patrol, use Biotic Charge from the ridgetop. You'll bypass the route on the left and catch the entire troop off guard. Follow up with Nova, then use a series of Biotic Charge/ Nova/melee combos to obliterate the entire geth patrol.**

## ANTI-AIRCRAFT GUN CONTROL STATION

After eliminating the geth patrol near the second campsite, follow the geth's patrol route back to its origin. You'll find a large AA gun control station. Near the far right edge is the computer station, but several geth are standing guard in the station's walkways.

They don't see you as you approach, so rush up to the station's entrance and immediately take cover near the small partition on the left. Get a good view of all enemy positions before you make your move.

### APPROACH 1: LEFT, HEAD-ON

The majority of the geth are standing near the station's left side. Send your squad to cover near the ridge edge of the station's entrance and slip in behind them. When you're within striking distance, open fire and get the geth's attention.

Lead with strong powers like Concussive Shot or Shockwave, and immediately focus your squad's powers on the geth Rocket Trooper. If you have the ability to unleash a combat drone, sic it on the geth at the farthest edge of the station's left side while you get to work on the enemies near you.

### APPROACH 2: RUSH RIGHT AND AROUND

The computer console you're after is on the station's right side, so begin making your way to the computer as soon as you enter the station. Distract the geth by either sending a tough squad member like James or Kaidan to the left (or using a defensive drone), while you and the other squad member rush to the station's right side.

As you round the corner from the right to the left, open fire with a close-range weapon on the nearest geth. Use Overload or Singularity to slow them down, and inflict as much damage as you can. Take cover to regain health, then rush all the way to the far right corner (bypassing the computer). From here you can rush around the rear of the station and sweep in to the far end of the left side.

If you executed this correctly, you will be in a perfect position to pinch all of the remaining enemies in the left lane. Create a cross fire between you and your other squad member near the station's entrance and finish the geth quickly.

# TIP

An alternate tactic for Approach 2 is to create a three-sided cross fire with your squad. This would require you to leave one member near the entrance and order a second member to stay near the computer console while you sweep around the station's far side to the far left corner.

## ITEM REQUISITION

After clearing out the station, grab the **Geth Technology** near the far left side, then pick up the **Geth Spitfire** to the right of

the computer console. You won't be able to incorporate the Geth Spitfire into your arsenal for good, but it will be infinitely useful in the next few minutes.

Approach the AA gun console near the far right side and assign one of your squad members to disable the AA guns. Select the squad member who least complements your current class build. If you need Biotic Powers, assign your weapons specialist, like James or Garrus. If you need weapons fire, assign Tali or Liara to disable the guns. If you have Liara or Tali as we suggested, then assign Liara, since Tali's drones will come in handy.

While your squadmate disables the guns, turn around and rush back toward the station's far left corner. Order your other squad member to post up near the center of the left lane (where the passage leads to the computer console). With the Geth Spitfire in hand, stay behind cover and wait for the geth Prime to come sauntering out.

When it does, order your squad member to distract the incoming geth Troopers, using Decoy, drones, or standard attacks, then open fire on the Prime. Concentrate your Spitfire on the geth Prime until it falls, then wipe out the rest of the geth in the area.

With the AA gun disabled, exit the station via the passage in the far left and continue your trek to the geth tower.

# CAUTION

Look out for a trip mine on this path as you exit.

## ITEM REQUISITION

To your left as you walk up the path leading out of the area is an **Assault Rifle Magazine** upgrade mod and a **Med Kit**.

Also, shortly after leaving the station, look on the path's left side. The path opens up a little bit into a slightly larger, wide-open area. On the left side is a ridge with a **Shotgun Shredder Mod**. On the right, near a dead body, are **Geth Parts**. Salvage them, then continue on your way.

Near the Geth Parts is an injured quarian named Dorn'Hazt. Speak to the downed quarian to find out that he tried to send out a distress call. He's not a soldier but a maintenance technician. Your responses to this quarian will determine whether you get Paragon or Renegade points. If you offer him help, you'll get Paragon points. Disregard his pain and you'll accrue Renegade points.

## ITEM REQUISITION

After speaking with the injured quarian, look on the ground to find an **SMG Magazine Upgrade**.

## DUAL AA GUN STATION

The next section splits into two paths, each one leading to an AA gun. You can choose to go either right or left, but there is no correct or incorrect path to take. This is truly a matter of preference. Both sides have similar layouts and have geth squads manning a mounted turret. We chose to go right first.

### APPROACH 1 (RIGHT AA GUN): SWEEP RIGHT, TAKE THE TURRET

The area around the right AA gun is a series of walkways that form a long, bifurcated rectangle. The mounted turret is near the center of the rectangle and is aimed directly at you as you enter the area. Rush to cover directly ahead of you and instruct your squad to do the same.

Slowly direct your squad to the right walkways and stay behind cover. Order your squadmates to engage the enemies, but leave them in position to hold the attack near the front of the battlegrounds. Once they've engaged, rush up all the way across the right walkway past the mounted turret, until you're directly behind the entire geth squad.

Round the corner left and pinch the squad. Take out the enemies nearest to you then take the turret for yourself. Use it to shred through the remaining geth in the area while your squad baits them out of coverage.

### APPROACH 2 (RIGHT AA GUN): HANG LEFT, HUNKER DOWN

The mounted turret can make life very difficult for you if you stay too far to the right, directly in its line of sight. Instead of risking being torn to shreds by the turret, shift everyone left behind cover, just enough so the turret doesn't have a clear line of sight to you.

Stay behind cover as much as possible, and use strong power combinations to destroy enemies. If you veer too far to the right and take turret fire, back off until it can't see you, and resume your attack.

Geth enemies will come to you at this position, but if they are too slow to chase use decoys and drones to flush them out.

# ITEM REQUISITION

With the area free of all geth, take a minute to examine the area near the right corner. There you will find an **Armax Arsenal**

**Chestplate.** Pick it up before disarming the AA gun.

Approach the AA gun console in the far right corner and assign one of your squad members to disable this gun. While they do that, rush back to the mounted turret and activate it. Several more geth will rush in from the entrance to the station.

Stay on the mounted turret, level the gun up to head height, and open fire as the geth start to approach. Their armor is no match for the turret's raw power, so slowly pick your targets moving smoothly from left to right, and keep the gun as level as possible.

When the geth Prime arrives, tilt the gun up a bit to compensate for its height, and focus on the Prime until it falls. A few short seconds later, the geth stop pouring into the area and the door to the right of the gun turret opens, revealing a short hallway leading to the next AA gun.

Behind the door are two geth soldiers, a geth Trooper, and a geth Pyro. Hit them both with Singularity, Shockwave, or a grenade. The hall's cramped space ensures you have both enemies in your line of fire no matter what attacks you choose. Make short work of them, then rush into the next gun area.

## APPROACH 1 (LEFT AA GUN): SPLIT UP

The entrance to the next AA gun area is similar to the first: a series of long, connecting walkways forming a rectangular battle area. Near the center is another mounted turret. Since you enter near the area's lower right corner, you have two paths available to you—the left lane and the right lane, both leading out of a corner.

Send one squad member to the right while you and the other take the left. Stay behind cover as you slide left, and order your crew to combine powers as much as possible. If you have Tali, however, use her drones to create a fourth target for the geth and the turret.

Leave your second squad member behind as you continue moving to the far left side and begin circling around the turret's right side. Clear the area out before disabling the next AA gun.

## APPROACH 2 (LEFT AA GUN): STRAIGHT RIGHT

As you enter this area, the AA gun console is directly in front of you, along the far right walkway. You can opt to go straight to the console upon entering. Direct your squad straight ahead, and use disruptive powers to distract and slow your enemies. If you have a drone, sic it on the turret.

Face the left of the area and strafe right, behind your squad, as you fight your way to the computer console. Clear as many enemies as you can, then, once you're behind the turret, take the command of the turret and sweep the remaining area of all foes.

Once again, assign a squad member to disable the AA guns while you take the turret and decimate the fresh batch of geth that attack your position. With the AA guns down, your shuttle is now clear to swoop in and destroy the jamming tower. With communications back up and running, you can quickly locate missing Admiral Koris and fly to his position.

### TIP

Before you disable the AA guns, examine the wall along the area's left side. There is a console displaying jamming tower data. Examine it before finishing this mission.

Before you disable the AA guns, examine the wall along the area's left side. There is a console displaying jamming tower data. Examine it before finishing this mission.

Back in the shuttle, you get a communication from Admiral Koris. Either tell him you're on your way for Paragon points or tell him to hold off his attackers to gain Renegade points. Before you can reach him, however, you must make a choice.

The admiral is more concerned with his people than with his own rescue, so you must choose whether to save him (and convince him it's the right thing to do in the meantime) or save the civilians. If you choose to save the admiral, you'll get an opportunity to either use a Paragon persuasion or Renegade persuasion. Choose according to your leaning.

If you choose to save him, you'll have to free him from his pinned position using the turret from your shuttle. Pick off the geth from above as you circle above the admiral's position, then rescue him.

If you opt to save the civilians, the general stays behind, and you force the other quarian admirals to look after the civilian fleet in Koris's place.

### NOTE

If you want to continue in the main campaign, you can proceed to "Priority: Rannoch" right away. Otherwise, now is your last chance to shut down the geth Comm Station. If you don't complete "Rannoch: Geth Fighter squadrons" now, you'll lose the opportunity to do so after completing "Priority: Rannoch."

## ACT 2—PRIORITY: RANNOCH

The geth remain under Reaper control, thanks to a base located somewhere on the surface of Rannoch. Continue to help the quarian fleet survive the geth attack until the Reaper base can be located.

## MISSION BRIEFING

**Battlegrounds:** No matter where you engage in battle during this mission, EDI and Tali will prove to be your best weapons. Tali must come along, forcing you to decide on the third squad member. Bring EDI, and her Decoy ability will prove very useful in nearly every encounter.

The geth facility is comprised of a series of walkways, many of them with great spots for cover. However, like the geth Dreadnought, the structure isn't overly complex or spacious. The machine's gift of efficiency allows them to utilize small walkways without the need for wide, open spaces.

Adept players will enjoy being able to combine powers in tight spaces, while snipers and Engineers can safely engage enemies from across long walkways.

Ashley's disruptor ammo allows her to rip through enemy shields and can help the whole squad if she has the squad ammo upgrade. With Tali present to remove geth shields, Liara provides excellent crowd control with her Singularity power and can take down armored enemies with Warp.

### NOTE

If you imported a save where Tali is not available, then you can select any other two squad members for this mission.

**Consequence Overview:** There aren't many options for Paragon/Renegade points during the mission; however, after the final battle, you'll be faced with a major decision that not only grants you Paragon/Renegade points, but also decides which new fleet you'll be bringing into the war.

## WAR PREPARATIONS

As the war heats up, things around the Normandy and the Citadel begin to cool down. There are no new missions to pick up, so feel free to either turn in any side missions you've completed to the Citadel or travel across the galaxy to complete missions before it's too late. If you completed only one of the two previous missions, you can take this time to complete the second. Once you begin this mission, the other one disappears.

If you'd like to get straight to the next mission, skip to the "Reaper Base" section later in this guide.

### ABOARD THE NORMANDY

Tali and Admiral Xen are in the midst of a fierce disagreement in the war room. Listen to what they're talking about and either support Tali or the Admiral. If you support Tali, you'll gain Paragon points. Support Admiral Xen for Renegade points.

### REASSIGN POWERS

If you've already reassigned your powers once for free, reassigning your powers again will cost you only 5,000 credits. It is well worth it if you've invested points in powers you don't frequently use. Spend the credits now and reassign your powers so that you maximize the value out of every point.

### UPGRADE WEAPONS

Now is another good time to invest in weapon upgrades. Many of the upcoming battles will be against multiple types of enemies at once, such as geth Hunters, geth Rocket Troopers, and geth Prime, so upgrade any new weapons that you have taken a liking to. Weapons like the Arc Pistol, which is specifically designed to be used against artificial life-forms, will be of great help.

## REAPER BASE

### NOTE

While on approach to the landing site, the Geth VI reveals that it still has Reaper components integrated into its system. Upon landing, Tali cannot help but become emotional. She's one of the few quarians to set foot on her home planet, and she's feeling hopeful about the outcome of this mission.

The Reaper base is heavily defended by geth still carrying Reaper code and enhancements, so you're greeted by a large squad of geth guarding the entrance to the base. Take cover behind the small partition and order your squad to do the same. Leap over the wall into the next small section, clear out any geth in your way, and order your squad to advance.

Spread your squad along the wall's left section while you take the far right end for yourself. From here, you can get a clear view of the enemies' left side while your squadmates engage them head-on. Use power combinations to weaken the geth's numbers, then leap over the wall into the next section of the battlegrounds.

This time, you'll come upon a large rock structure near the center where you can take cover.

Once again, reach cover and wait for the geth to give you a clear shot. From here, you can either continue to engage nearby enemies or equip a sniper rifle and start picking off the geth near the bottom of the battlegrounds area. As you eliminate enemy forces, more come charging in from the far lower end of the base's entrance.

Use Tali's drones to attack the geth and give them a fourth target. If you've brought EDI, activate her Decoy ability to increase your numbers.

If you prefer close-quarters combat, leave your cover and descend to the lower area. Lead with a few well-tossed grenades or other explosive power combinations to whittle down their numbers, and switch to a good close- to medium-range weapon. Melee combatants can also rush down and engage the geth in melee combat. Vanguard and Sentinels will have the advantage in this area because there is little to get in their way as they rush from enemy to enemy.

#### ITEM REQUISITION

After clearing out the area, check the lower left corner. You'll find an **SMG High-Caliber Barrel** just behind the building's massive support.

### SPLIT TOP LEVEL

With the area below free of all geth, turn to the long pipes nearby and hop on top of them. Follow the pipes up to a raised platform on the right. This area has two ladders, each one reaching the top platform. Since the platform is split in the center you essentially have two short paths, one starting at the left ladder, another starting at the right ladder.

#### APPROACH 1: SPLIT UP

When you reach the ladders, go up the right one first and take cover. Order your squad to then go up the ladder on the left. You now have the entire top platform covered. Before you proceed, eliminate the nearest geth, then rush up the pipe on the left.

Follow the pipe up to the next section and press the action forward. There's plenty of cover on this side of the platform, so don't stay out in the open too long. Since your two squadmates are covering the far left side, order Tali to release a drone near your position to even up the numbers.

Stalk the geth near the platform's far end, and move up the right platform at the same time that you move your squad up the left. Keep a slow, steady approach forward until you've cleared both sides of the platform.

## APPROACH 2: STAY LEFT

If you prefer to keep the squad together, stick to the left side, which has a long wall section running up its right side that has small intersecting partitions. Use these partitions as cover for yourself and the crew to leapfrog up the length of the platform.

Send drones or decoys ahead to slow and stun your enemies. If you brought Liara, this is a great time to unleash a Singularity field near the far end. Carefully move from cover to cover, picking off enemies as you go, and clear the entire area.

If you take too much incoming fire from the right side, order your squad to eliminate foes on the far end while you concentrate on clearing geth on the right platform.

There is one geth Rocket Trooper perched on the catwalk above you, so eliminate it first, before going up the ladder at the far left end.

### ITEM REQUISITION

There is an **Assault Rifle Piercing Mod** near the far platform, against the back wall. Grab it, then hop over to the left platform, just beneath the ladder leading to the next level. There you will find **Kassa Fabrication Gauntlets**.

## UPPER ENTRANCE APPROACH

After climbing the ladder, you reach a series of walkways that lead to the upper entrance. The walkway splits into two paths, one below and another along a series of pipes on the left side. However, you can approach this section of battle three different ways.

### APPROACH 1: DEATH FROM ABOVE

If you choose to stay high, you can hunker down against the wall directly in front of you. Order your squad to take position either to your left or right, while you rain down death on the geth below. The geth will try to scramble from cover to cover, but they can't fight their nature. They'll constantly try to advance on you and leave themselves open to attack.

If any geth attempt to attack from behind you or to circumvent your position, free up one of your squad members to deal with them. As always, Tali's drones are perfect for keeping pressure on the geth below.

After destroying the first few geth near you, equip a medium- to long-range weapon and begin picking off the geth Rocket Troopers that attack from the far end. This approach is better suited for long-range fighters with sniper rifles. Adept players will also do well in this approach, since they can mix up powers both at a distance and close-range, if necessary.

### APPROACH 2: LOWER LEVEL

Players who prefer a more direct approach can drop directly to the lower level where all the geth are located. Equip a strong medium- to close-range weapon and slowly press the action up the lower level. The geth will attempt to take cover as you approach, but you can easily flush them out with powers like Singularity or Defensive Drones.

This approach is also well suited for Infiltrators specializing in melee combat, Vanguard, and Sentinel. With a shotgun in hand and little to get in your way, you can move quickly between enemies, blasting them up close and finishing them off with melee attacks.

When the geth Rocket Troopers are the only foes left, eliminate their ranged advantage by rushing them, and engage them in close-quarters combat. Use grenades if you have them; otherwise, stick to power combinations and heavy firepower.

## APPROACH 3: RUN THE PIPES

Players with a bit more versatility can use the pipes on the top level's left side to reach the far end quickly. Leave your squad near the entrance (you can even order one squad member to take the lower level), while you rush across the pipes on the far left.

Open fire on enemies to your right as you go to weaken them and make them easy prey for your squad. When you reach the far end, either eliminate the geth Rocket Troopers from your elevated position or drop down and rush them up close. The goal is to clear the far end quickly, then turn around and face the length of the walkway to pinch any remaining enemies between you and your squad.

Once the area is clear, make a right into the small passageway leading into the facility. On the passage's other side is a long Geth Trooper. Take it down quickly and exit the passage. By now the geth are aware of your plans to destroy the base, so they've closed the blast shield over the Reaper's location.

### ITEM REQUISITION

Examine the right side of the small passage for a bit of **Reaper Tech** to salvage. After eliminating the geth Trooper, turn left to find an **SMG Ultralight Materials** mod upgrade.

Make a right at the corner and follow the walkway down to a long catwalk. There are geth guarding the entire length of the walkway ahead, so take cover behind the tablelike structure at the walkway's entrance and position your crew behind the left and right partitions jutting out of the sides of the walkway.

Wait for the geth to group up near the walkway's center and toss a grenade ahead of your squad. If you don't have grenades, use a disruptive power like Shockwave, or hit the group with Singularity. Send your crew down the hall to mow down the remaining geth, then rush down the walkway behind the cover of your crew.

Since the walkway has a series of partitions running down its sides, you can leapfrog your squad safely and easily. Stay behind cover as much as possible and lead with power combinations, grenades, or drones. EDI's Decoy is also a great help as you rush down the walkway.

Reach the far end and turn your attention to the balcony on the left side. The geth in the balcony can't leave their position, so use your best long-range attacks to take them out. If you have a sniper rifle, equip it now and string together a series of headshots to take them down from afar.

If you don't have a sniper, rely on powers and a medium-ranged weapon to eliminate the enemies on the left balcony. Take out or distract the geth Rocket Trooper first, then eliminate the rest of the Troopers to clear it out.

#### ITEM REQUISITION

Wait until you've defeated every enemy in this section to pick up all of the items scattered nearby. On the right side of

this area's entrance is an **Assault Rifle Stability Damper IV**. Near the exit to this area, at the walkway's far end, is a **Geth Plasma Shotgun** and some **Data** you can salvage. You'll find more **Data** to salvage and a **Med Kit** after exiting this area; pick them up as you proceed to the next section.

Exit through the door on the right and follow the halls to the next section of the facility. In order to retract the blast shield, you'll need to hit the override switch on the shield. Turn left as soon as you enter this area, and sprint to the override console near the far edge.

When you hit the override button, the area nearby begins to fill up with geth. The Geth VI needs you to buy some time while it bypasses the security systems. Retreat a bit to the area where you entered. It has only one point of entry, near the override console, and is very defensible. Station your two squadmates near the section of walkway by the console and begin fending off attacking geth.

They won't all rush your position at once, so you can pick them off one by one, or even two at a time if they get too close. Send out decoys and drones to draw fire away from your position, and occasionally venture out of cover to blast nearby geth.

If you spy a geth Pyro approaching, meet it head-on. It's better to localize its fire on only one of you than to let it get close to the entire squad and allow it to scorch you all at once. Rush the Pyro and quickly knock it off balance, then follow up with weapons fire to extinguish the fiery geth.

#### CAUTION

Watch out for geth proximity mines in this area. Trip one and you can sustain substantial damage.

If you favor long-range attacks, leave your squad by the override console and back up to the area where you entered this section of the facility. Aim your weapon across the gap to the center walkway and open fire.

Eliminate all of the enemies and survive long enough for the Geth VI to bypass security on the second override console at the area's far left side.

#### ITEM REQUISITION

Don't activate the override console right away. Instead, explore the area to the right of the elevator at the far end

to find a **Med Kit**. Pick it up, then return to the second override console.

Activating the second override console gets the attention of a geth Prime and a pair of geth Rocket Troopers. Leave your squad members to guard the far left passage near the second override console, while you backtrack to the center lane and get a direct path straight to the elevator.

Pick apart the Rocket Trooper first, while your squad engages the Prime; then slowly press forward, toward the elevator and hit the Prime with everything you've got.

Keep your distance from the geth Prime. If you capture its attention from the center walkway, stay behind cover and keep it engaged. This will allow your crew to dish out major damage from close range. Again, if you can release a combat drone or a decoy, now is a good time.

Take the elevator to the level above you after destroying the geth Prime and quickly rush to cover as soon as you exit the elevator.

When you reach the top level, there is a Geth Spitfire sitting on the crate directly in front of you. Grab it first before getting the geth Prime's attention near the far end. The Prime will notice you quickly when you pick up the Spitfire, so stay behind cover and sic your squad on the Prime to distract it.

Pop out of cover when the Prime engages your team, and lay it to waste with the Spitfire. You'll face three geth Primes simultaneously, so take on one at a time, using the Spitfire to shred them quickly.

# ITEM REQUISITION

There are three Geth Spitfire weapons nearby: one on the crate as you enter the area, another one on the far left near a locked door, and a third atop another crate near the far right. You can take down all three Primes with one Spitfire if you keep to headshots, but if necessary, you have one Spitfire for each Prime.

Drones and decoys work perfectly during this Prime encounter. Distract them with the drones while you blast them from behind with the Spitfire. Take down all three and the floor is yours.

Walk up to the ledge at the far end of the center walkway and take out your targeting weapon. Aim it down at the Reaper station. Wait for it to lock onto the red node and the Normandy bombs the target. The destruction frees a Reaper hidden below the station, but it is too massive for you to engage on foot.

Sprint to the left, and make a beeline to the hovercraft where the Geth VI is waiting to rescue you and the squad. The massive Reaper machine begins to stomp after you as you get away in the hovercraft. One blast of its central cannon and it crashes your escape.

## DON'T FEAR THE REAPER

The Reaper prepares to fire and is caught by an orbital strike that knocks it down. The quarians must have hit a weak point, the targeting chamber, only visible as the Reaper prepares to fire. The admirals urge you to escape, but that will leave them to die at the hands of the geth. You get out of the hovercraft and sync the targeting laser to the entire quarian fleet. They prepare to fire while you paint the Reaper's weak point.

When the Reaper opens up to fire its main cannon, aim your targeting laser at the vulnerable pink spot and lock on. You'll notice the blue radial light hone in on your target as the Reaper continues to charge. When the light completely locks on the target (the radial light will shrink to a pinpoint), the fleet fires on the Reaper and knocks it off balance.

The first attack on the Reaper is a free shot. The massive machine was getting its bearings while you were free to zoom in and lock onto it. The Reaper's next shot, however, will be aimed directly at you. Give yourself some space to maneuver by rushing to the right side of the ledge you're standing on and turn to face the Reaper.

When it begins to charge again, lock onto the machine's cannon. Let the Reaper fire its cannon, then execute an evasive roll to the left as the laser beam cuts a path toward you. Resume your targeting lock on the machine until the fleet can completely lock on and fire at it a second time.

### TIP

Don't worry about rolling to evade when your lock is almost complete. The weapon will remember lock status, and you will be able to complete the lock as soon as you finish rolling.

The Reaper's laser fires more accurately at higher difficulties. If playing on regular difficulty, you only need to move once the Reaper starts firing to avoid getting hit. At the higher difficulty levels, dodging too early will cause the Reaper to track your movements and adjust its attacks—you will need to wait until the beam is closer to you before rolling to the side.

After taking a hit, the monster steps closer to you before attempting another shot. Continue edging to the right, rolling left evasively and painting the target until it's taken two more shots from the fleet.

Eventually, the Reaper is directly on top of you, allowing you to get one final shot on its laser cannon. Lock on one last time and the fleet unloads everything on the Reaper, putting it down for good.

Even though it has fallen, the massive Reaper still insists you will be defeated. As you stand there, in front of the skyscraper-sized machine, you can engage it in a conversation. Attempt to reason with it for Paragon points or stand up to it for Renegade points.

Regardless of your response, the Reaper remains adamant that you and the rest of the organic creatures will be destroyed. If you chose the Renegade response at first, you'll also get a chance to follow up with another Renegade response during the conversation.

## STANDOFF: GETH VS. QUARIAN

The Reaper is down, and the geth are no longer under their control. However, the Geth VI still has the Reaper code upgrades integrated into its system. With no puppeteer pulling their strings, the Geth VI suggests unloading the Reaper code to the remaining geth across the quarian system.

The upgrade would grant the geth true free will and make them capable of choosing sides against the Reapers. If you choose to upload the code, you'll gain the geth and accept potential consequences. However, Tali insists that this is a bad idea. The new, upgraded geth could decimate the quarians! If you choose to listen to Tali's pleas, you'll let the geth die but will retain the quarian fleet's support.

The choice is yours.

### TIP

There is a way to reach a truce between the geth and the quarians and retain both their fleets for the *Galaxy at War*, but this requires that you met very specific circumstances during the events of *Mass Effect 2*. In order to bring out peace between the geth and the quarians during this encounter, you must:

Keep Tali alive through *Mass Effect 2*.

Kill the heretics during Legion's loyalty mission, "A House Divided," in *Mass Effect 2*.

Keep Legion alive during *Mass Effect 2*

Complete "Geth Fighter Squadrons" mission.

If these are all true, you then gain "points" for the following:

Complete "Rannoch: Admiral Koris" (+1 point)

Save Admiral Koris during "Rannoch: Admiral Koris" (+1 point)

Save Tali from exile in *Mass Effect 2* (+2 points)

Destroy the heretic geth in "A House Divided" in *Mass Effect 2* (+2 points)

Broker peace between Legion and Tali in *Mass Effect 2* (+1 point)

If you have fulfilled the plot elements required and have at least 5 points, you can persuade the quarian fleet to stand down using Paragon persuasion. This is extremely difficult and requires four bars of Reputation.

Also note that siding with the geth over the quarians will have an impact on your relationship with Tali.

## ACT 2—PRIORITY: THESSIA

The asari, growing desperate as the Reapers attack their systems, have revealed an artifact that may hold the key to finding the Catalyst. Meet a scientific team at a temple on Thessia and investigate the artifact for clues.

## MISSION BRIEFING

**Battlegrounds:** Thessia is a beautiful planet with gorgeous architecture. Unfortunately, by the time you arrive, it has become a war-torn shadow of its former self. You will engage in battle across broken bridges, demolished courtyards, and even inside sacred asari temples.

The bridge battle can be approached many ways, but since it's a direct assault against your enemy and the bridge doesn't provide any alternate paths, a head-on battle is your best bet at victory. Players with sniper skills may appreciate the straight-and-narrow approach, while most other players can engage the Reapers in standard warfare tactics.

Mid-mission, you will come upon a large courtyard. The fallen pillars and other debris here create multiple avenues of approach. However, snipers can enjoy attacking across the plaza and pick off enemies before they approach. The most difficult encounter here will be against the first Banshee you face. These asari-Reaper hybrids are large, fast, and capable of dealing lots of damage with only a few attacks.

The final battle will take place inside an asari temple against an enemy you've yet to face in direct combat. Like the Banshee, he is fast and elusive. Use the temple's seats, pillars, and displays for cover, but sprint down the many lanes in the temple when you need to create some distance between you and your foe.

**Consequence Overview:** This mission is loaded with weighty conversations. Nearly every conversation from the initial dialogue with the asari Councilor and Liara while you're en route to the mission to the final debate with your archnemesis will carry Paragon/Renegade implications.

When you encounter a lone asari survivor near gunships, keep your Paragon/Renegade leaning in mind. You'll have the opportunity to gain more points there as well. Finally, nearly all dialogue choices made inside the asari temple will carry Paragon/Renegade choices as well.

## AROUND THE GALAXY

### Mission Unlocks

None

### Mission Locks

Tuchanka: Turian Platoon

## WAR PREPARATIONS

You've freed the geth from the Reapers and eased tensions for the quarians. Depending on your final choice during the previous mission, you've either added one or both of the two fleets to the Galaxy at War. Even with all the progress you've made, the fight is still ahead of you, and you have yet to complete the key component to winning the war. The Crucible is missing the mysterious "catalyst," and the asari Councilor on the Citadel might have an idea as to what it might be...or where it may be located.

If you'd like to get straight to the next mission, skip to the "Priority: The Citadel" section later in this guide.

### SPEAK TO TALİ

If you sided with Tali or brokered a peace between the geth and the quarians, you can speak to Tali aboard the Normandy. She's down in the engineer deck with Adams, so go down and have a chat with her. You'll gain Reputation points for the chat.

### GIVE DIANA ALLERS THE SCOOP

The quarian invasion of the Perseus Veil may be in the past, but it's still new and noteworthy to the rest of the Alliance planets. Diana Allers is ready for another interview, so go to your quarters and call her up to give her the scoop. This interview is short, but at least you'll get the chance to score some Paragon/Renegade points.

# PRIORITY: THE CITADEL

Upon returning to the Normandy after the previous mission, you receive a private communiqué from an asari representative on the Citadel. She requests your presence at the Citadel, so go there first to pick up your next mission.

### NOTE

Even though the actual mission you'll be embarking on is "Priority: Thessia," you must first go to the Citadel to acquire it. This short segment is called "Priority: The Citadel."

Go to Councilor Udina's old office and speak with the asari Councilor. She reveals the location of a secret artifact that may help reveal the answer to the Catalyst question. As you might expect, the asari Councilor is careful to reveal the specifics about the artifact.

If you press her, however, you can get more information. Reply in accordance with your Paragon/Renegade leaning. If you want Paragon points, be agreeable. If you're a Renegade, confront her.

## PRIORITY: THESSIA

En route to the Thessian temple, Liara, who must be a part of your squad for this mission, reveals that she's been there before with her mother. More importantly, she's preoccupied with the people dying on her planet. Ask her about her mother and get more information about the temple, its government funding, and the shady history behind it all.

Since this conversation yields Paragon/Renegade points, press the conversation in accordance with your leaning. Reassure her that you'll save her people to gain Paragon points or tell her to block out that train of thought for Renegade points.

As you touch down on the planet, you see the battle against the Reapers raging across the Thessian surface. Disembark the shuttle and speak to the nearby asari soldier, Lieutenant Kurin.

### ITEM REQUISITION

Examine the area behind the asari squad to find an **Umbra Visor** and some **Supplies** that yield credits when opened.

Before you can speak with the asari soldier at length, the area gets bombarded by Reaper rockets. Lend a helping hand, rush over to the unmanned turret, and activate it. Take aim down the length of the bridge ahead of you and open fire on the Brute before it can attack the asari camp.

Keep a steady stream of fire on the bridge as more Brutes and several Husks rush the asari soldier holding the barrier. Eliminate a Brute, then quickly swing the turret left to spot any Husks near the barrier. Eliminate the Husks, then swing the turret back to the right to intercept new Brutes.

Continue swinging the turret left and right, eliminating Reapers as you go until the coast is all clear. Get off the turret and return to Lieutenant Kurin.

### TIP

Keep an eye on the **Barrier Strength** meter in the screen's top right corner. If it is being depleted, it means that it is currently under attack.

Lieutenant Kurin is not convinced that your mission is more important than hers. Of course, it doesn't help your cause any that she wasn't given any information about your mission, so she can't weigh the importance of the two and make a decision. This is your chance to either cooperate and persuade her, or force the issue.

Your responses to Lieutenant Kurin during this conversation will also yield Paragon/Renegade points. If you divulge information about your mission, you'll gain Paragon points. Keep her in the dark and you'll accrue Renegade points. She'll let you proceed either way.

## THE BRIDGE

The bridge ahead is long and dangerous. As you cross, a group of Harvesters flies by overhead. They don't attack you, but they do release several Cannibals and Marauders. The Reapers wait on the far end to tear you to shreds, but there is only one way to go—forward.

Stop behind one of the supports on the side and duck for cover. Aim down the length of the bridge and open fire on the Cannibals at the far end. Pick them off from your covered position. They don't advance down the bridge in your direction, so you can either keep your distance and snipe them, or get in closer for a better line of sight.

Since the bridge is straight and doesn't have any extra levels or side passages, the battle here can be very straightforward. Use a preferred combination of powers and weapons fire and the Cannibals and Marauders go down easy. If you need an extra hand to finish the fight quickly, use a combat drone to inflict extra damage during the battle.

Make a right at the bridge's end and pass through the interior of a demolished building. Several more Harvesters attack the asari soldiers ahead of you, but there's nothing you can do. Keep going until you reach a ledge overlooking a courtyard below.

## THE COURTYARD

The courtyard is a large, wide-open area with plenty of fallen structures and planters for cover. Near the center of the courtyard is a decorative structure that breaks the courtyard into two halves. The left side of the courtyard is full of tall debris and stops near the center structure. The right side of the courtyard leads to the entrance of a building that provides plenty of great cover and leads all the way to the opposite end.

### APPROACH 1: SNIPE, THEN SNEAK RIGHT

The first approach to this area may be the most obvious. Since you enter the area from an elevated vantage point that grants you a view of the entire area below, take out a sniper rifle and get to work. Use your team's powers to distract the enemies below, or even use your crew as bait and begin picking off foes with well-placed headshots.

Use powers that can disable, stun, or otherwise slow down enemies in order to get as many headshots as possible. After taking out all of the enemies near the courtyard entrance, venture down the steps and slowly creep right, toward the far building. Pick off more enemies as you go, using power combos and weapons fire (you could switch to an assault rifle now to compensate for the range) until you reach the courtyard's opposite end.

Take cover in the entrance to the building on the right and order your squad to unleash their powers on the enemies ahead. Use drones and Singularity. Liara's Warp also helps dish out damage. Eliminate all foes until only the Banshee remains.

### APPROACH 2: CLOSE-QUARTERS, ADVANCE IN A LINE

Players who prefer a more traditional approach can rush down the steps and engage the enemy directly in the courtyard. Use powers like Adrenaline or Tactical Cloak to sneak down the steps and blast the Cannibals near the base of the steps. With Adrenaline, you can attack multiple enemies before it wears off. If you are using Tactical Cloak, attack the strongest enemy first, then turn to the rest of the Reapers nearby.

Order your squad to take cover near you, in the courtyard, and begin combining powers to destroy the rest of the Cannibals. Use power combos like Liara's Singularity and Warp, or use Cryo Blast. If you've got a good close-range weapon, equip it and activate a Power Ammo. Incendiary Ammo works great against Cannibals.

Sneak around the courtyard's left side until you reach the center structure. The center complex provides a great divide between the front of the courtyard and the far side so you can approach the enemies on the far side using plenty of cover.

Lead with your powers, but keep the pressure on the other enemies as you approach. As you move in, also direct your squad to approach from the far right side. This way, you can move at the same time and advance the squad as a line of protective fire and power combos.

Continue moving forward, past the center structure, until you reach the far end. Concentrate on the Marauders, taking them out one by one, until only the Banshee is left.

## BANSHEE BATTLE

The reason you leave the Banshee for last is because this asari-Reaper hybrid is devilishly fast and capable of teleporting from place to place in the blink of an eye. One second she can be next to you, and the next she'll be across the courtyard attacking a teammate.

Spread out your squad so her attention is divided, then order your teammates to unleash all of their most destructive powers on the creature. You may have to chase the Banshee as she rushes from squad member to squad member, but you'll avoid the squad taking one of her devastating blasts all at once.

As your squad members lure the Banshee around the courtyard, follow the asari abomination and hit her with power combinations and heavy weapons fire until she falls.

### TIP

Sniper-proficient players can keep their distance and attempt to pick her off, but the Banshee's ability to warp back and forth make it increasingly difficult to get headshots unless you're a Soldier and can use Adrenaline.

In the far back left corner of the courtyard on the second highest elevated level is a hidden Titan Missile Launcher, which is very useful against the Banshee.

### ITEM REQUISITION

Just past the center area, near the left side, is a **Med Kit**. Grab it after you clear the area of all enemies, or make a dash

for it while you fight them. There is also another **Med Kit** on the right side of the courtyard in the alcove with a roof. After leaving this area, you'll pass through the interior of a demolished building. Inside you'll find a terminal you can salvage to get some credits.

Exit the courtyard via the ramp on the far end. It leads into a building that has been torn to shreds. Follow the interior of the building to a door and go through. You emerge on another balcony overlooking a courtyard below. As you exit, you spy a Reaper ship in the distance. Things are getting worse on Thessia.

The courtyard below has several Cannibals feasting on the dead. Open fire on them. When you do, several asari snipers on the courtyard's opposite end also open fire on them. Go down to the courtyard and cross it to reach the snipers on the other side.

Before you can reach them, however, a rogue missile hits their location, destroying all but one of the asari snipers in one blow.

#### ITEM REQUISITION

Before reaching the sniper's nest, the right side of the courtyard has a debris ramp leading up to a balcony containing a **Med Kit** and a **Shotgun High-Caliber Barrel Mod**. The ground level underneath this balcony has a **Broken Shotgun** that can be salvaged for credits.

The sniper's perch has several great items to pick up. Grab the **M-98 Widow** sniper rifle and the **Sniper Rifle Concentration Module** to augment your arsenal. Also pick up the Med Kit nearby before proceeding. The M-98 Widow is a great sniper rifle to equip immediately. If you've got another rifle that is already upgraded, then weigh their stats before equipping it. If your current sniper rifle is level I, then equip this one in its place.

Aim over the balcony and start picking off the Marauders and Cannibals below. Take down a Cannibal first and other Cannibals will rush to it when it falls. As they do, they'll leave cover and expose themselves to weapons fire and power combinations. Take them down, then focus on eliminating the Marauders.

#### TIP

Look for the barrier engine along the back wall of the area below. Blow it up first. This barrier engine provides barrier protection to the Reapers that will refill over time if depleted. It is still possible to kill Reapers while the barrier engine is active; it's just harder.

## OUTPOST TYKIS

Drop to the area below, then exit through the hole in the wall on the opposite side. Make a left and walk up the stepped structure toward the far building. This is Outpost Tykis. When you reach it, you'll encounter a lone asari soldier. She's all that is left of the asari support squad sent to help the scientists.

Luckily, she can call in air support to help you reach the interior of Outpost Tykis. As the asari gunships zoom in, the Reapers entrench themselves farther ahead. Wait for the gunships to open fire on the Reapers below and begin thinning their numbers.

The asari soldier takes position ahead of you and lays cover fire as a large squad of Reapers comes marching down the stairs toward you. Between the asari soldier and the gunship, you've got a small window to make your approach to the asari temple ahead. Leave cover and sprint past the attacking Reapers.

Shoot only to clear a path ahead of you, but don't engage them any more than you need to. They will quickly close around you and overwhelm you; instead, sprint up the debris pile and past them to the next checkpoint. Make a right when you reach the top of the debris.

### TIP

You can engage the Reapers during this encounter, but doing so will only cost you Medi-Gel packs and risk mission failure. Instead, take advantage of the asari support and rush past.

Alternatively, there is another Titan Missile Launcher on the ground right next to where you take cover at the start of the fight. This will help if you insist on engaging in combat here.

### ITEM REQUISITION

As soon as you reach the top of the debris, look down and to the right. You'll find an **Assault Rifle Extended Barrel** upgrade.

Sprint toward the temple entrance. Slow down to destroy the Husks that rapidly approach you. Either mow them down with heavy weapons fire or toss a grenade ahead of you to catch many at once. Pick off any that remain, or use power combos to slow them down and immediately obliterate them.

Once the Husks are down, several Ravagers and Harvesters attack from afar. You can't win this encounter, so order your entire squad to take cover. Stay behind cover as much as possible, and only leave it to eliminate an enemy that gets too close for comfort.

Otherwise, wait for the gunship to draw away the Harvesters, then leave your position to eliminate the Ravagers and remaining Marauders. Cut down your enemies, then approach the entrance to the asari temple.

#### ITEM REQUISITION

Pick up the **SMG Heat Sink** mod near the front of the temple's entrance before going in. If you don't pick it up now, you won't get another chance to do so. After Liara removes the barrier blocking the entrance to the temple, you can pick up a **Med Kit** as you enter.

## ASARI TEMPLE

Enter the asari temple and look around. There are several artifacts on display. The artifact you're looking for is at the temple's far end, at the base of the large statue. However, take this time to examine all of them and learn a little bit about the asari culture.

When you're ready to continue, examine the base of the statue of the goddess Athame. When you approach it, you sense a Prothean Beacon inside the statue. Liara, in disbelief, briefly doubts your claim. During this conversation, you can hypothesize why the asari have become so advanced a species, and either agree or disagree with the asari's decision to keep this beacon hidden. If you agree with their decision to not share knowledge, you'll gain Renegade points. If you insist that the asari should've shared the knowledge with the rest of the galaxy, you'll gain Paragon points.

Examine the other artifacts nearby to find connections that will help uncover the Prothean Beacon. The first one is the mural to the statue's right. The other artifacts are a manuscript on the far left corner, the bust along the temple's right edge, and the shield near the temple entrance.

After activating all of the necessary artifacts, you can access the Prothean Beacon. Return to the statue and activate it to release an ancient Prothean VI.

The Prothean VI, Vendetta, explains that it may be too late to complete the Crucible. The ensuing conversation can also yield Paragon/Renegade points. Either ask for the VI's help for Paragon points, or demand its cooperation for Renegade points.

#### TIP

While speaking to Vendetta, select "The Crucible" conversation option. The ancient VI will tell you more about the device and something potentially shocking about the Reapers and the nature of the galaxy, its patterns, and its cycles.

## KAI LENG BATTLE

Before Vendetta can integrate with your systems to help with the Crucible, Kai Leng interrupts you. He's brought a virtual construct of the Illusive Man with him. Speak to the Illusive Man and listen to his plans. Rather than destroying the Reapers, he wants to control them. Choose the "Whose side are you on?" conversation option to get a Paragon/Renegade persuasion option.

When the conversation with the Illusive Man is over, your battle with Kai Leng begins.

The battle against Kai Leng can take many shapes, depending on your class and squad members. However, the only constant in this battle is Kai Leng. He's quick, he's capable of one-hit kills, and he frequently needs to recharge his shields after taking damage. As soon as the battle against the assassin begins, switch to a weapon that is good at close to medium range. Snipers can inflict big damage, but like the Banshees, Kai Leng can shift from place to place quickly, making him a sniper's worst nightmare.

Rely on heavy weapons fire to inflict major damage while using powers to supplement your damage-dealing or to slow him down a bit. Powers like Concussive Shot, Shockwave, and Throw can help keep Leng at bay for a bit, but only long enough to follow up with weapons fire.

If the assassin runs toward you, sprint away to create some distance, then turn around and attack again. Adept players can combine powers like Warp and Singularity, or even use Cluster Grenade to throw Kai Leng off his game as well. An Engineer's combat drone can add another offensive element into the mix and keep Kai Leng busy long enough to get a few good shots in. A Soldier's Adrenaline can also help by slowing time down—in effect, slowing down the assassin's movement around the temple.

Gang up on the Illusive Man's goon and inflict as much damage as you can. Once he has taken enough damage to deplete half of his barrier, he'll retreat to recuperate his shields while a Cerberus gunship opens fire on the temple's interior to keep you away from the vulnerable Leng.

He won't recover all of his barrier, so stay behind cover until the ship is gone, then immediately resume your attack. Stay away from him as he attempts to rush you and slice you with his sword, and dodge his Biotic projectiles. Whittle down his health again until he backs off a second time and attempts to regenerate more of his shields. Take cover behind one of the tall pillars near the temple seats and wait for Kai Leng to attack again.

Continue to engage Kai Leng, using powers to keep him at bay and inflict damage, then taking cover while he retreats. The fight will end when you've depleted all of his shields and he is on the verge of taking damage to his health.

Despite your best efforts to defeat Kai Leng, his gunship interferes and grants the assassin a small window to overpower you and your squad and make off with the Prothean VI. You return to the Normandy empty-handed as more Reaper ships touch down on Thessia. Your mission is a failure.

Back on the Normandy, you must relay the failed mission status to the asari Councilor. She doesn't take the news well, and Thessia's fall means that she must now consider plans for the continuity of her species.

With no clear course on how to continue, you gather the crew in the Normandy war room. It's clear that there is only one thing left to do. You must go after the Illusive Man if the Crucible is to have a chance at completion.

## ACT 2-PRIORITY: HORIZON

Cerberus may be using the Sanctuary facility on Horizon as a cover for secret activity. Land on Horizon and search for clues about Cerberus at Sanctuary.

Prima Official Game Guide

## MISSION BRIEFING

**Battlegrounds:** The Sanctuary's secret testing facility is comprised of several long, split halls and cluttered with machinery, tanks, desks, and debris for cover. Aside from the landing zone where you'll encounter a rival sniper, sniper-proficient players will rarely find an opportunity to use their long-range skills despite the facility's long hallways.

The facility is full of all types of Reapers, ranging from Husks to Banshees, so you'll have to use all of your powers and tactical skills equally in order to survive. When encountering high-level Reaper groups, like Brutes and Banshees, focus on the Brutes first, since they are slower and thus easier targets.

**Consequence Overview:** As things begin to filter down to a final encounter, all chances to shape the war, gain War Assets, and accrue more Paragon/Renegade points become more and more scarce.

There is only one option for Paragon/Renegade points during this mission. As the final moments of the mission unfold, you'll have the opportunity to either calmly talk down your prey or threaten him into complying.

## WAR PREPARATIONS

Things may not have worked out on Thessia as Kai Leng, the Illusive Man, and the rest of Cerberus threw off your plan. The fall of Thessia may weigh heavily on your mind, but your goal is less clear than before. Your next step, however, has temporarily shifted away from the Reapers. It's clear now that Cerberus will not stop at anything to control the Reapers and keep you from destroying them. The only way to destroy the Reapers is to remove Cerberus first.

If you'd like to get straight to the next mission, skip to the "Investigate Sanctuary" section later in this guide.

### CHECK YOUR E-MAIL

You've got plenty of motivation to find the Illusive Man, but if you need some more, stop by your private terminal and check your e-mail. You've got a very special e-mail that might help light a fire.

### SPEAK TO TALİ

Stop by the elevator on the crew deck to speak to Tali. Share your thoughts on recent events and let off some steam. She has some words of encouragement that you may want to hear before the next mission.

### SPEAK TO LIARA

The occupation of Thessia has been hard on Liara. Stop by her office and visit with her to get her thoughts on the situation. Listen to her and act on the Paragon decision point in this conversation to ease her guilt.

### SPEAK TO ENGINEER ADAMS AND K Aidan/ASHLEY

Engineer Adams and Kaidan (or Ashley) may also have some insight to share on Liara's current condition. Stop by the engineering deck and have a chat with them.

### SPEAK TO ADMIRAL ANDERSON

Before setting out on the next mission, go to the vid-com station in the war room and speak with Admiral Anderson. He's got some words of encouragement should you need them.

## INVESTIGATE SANCTUARY

As you approach the Sanctuary, a place for war refugees on the planet Horizon, you get a distress call from the facility. It's Miranda's sister. She claims the facility is not safe and urges you to stay away.

The landing zone is clear when you touch down. Walk forward to explore the Sanctuary facility and go up the stairs. As you approach the top of the stairs, a Cerberus shuttle crashes directly ahead of you. It's being chased by a Reaper Harvester. The Harvester soon loses interest in the crashed shuttle, leaving the three Cerberus troopers to evacuate the downed transport unit..

### SANCTUARY ENTRANCE

The entrance to Sanctuary is guarded by a sniper perched on the ledge with the crashed shuttle while two Phantoms approach you on the lower area. The area between you and the door is covered with rubble but flanked on the right side by a small hallway that provides excellent cover from the sniper. The sniper, a Nemesis, is well trained and capable of depleting your entire shield with a single shot. If you engage the Phantoms while your shield is gone, they can slice through you with one swipe.

## APPROACH 1: SIDE HALL COVER

Rather than stay out in the open for the Nemesis to pick you off, order your squad behind cover while you rush into the side hall. From here, you can slowly peek your head out and open fire on the Nemesis in his perch.

Adept players can use Throw, Singularity, or even Pull to yank the sniper out of position. Other powers like Warp or an Engineer's Overload can also shake the Nemesis out of cover. Follow up with explosive power combinations or weapons fire to take it out.

Once the sniper is out of the way, turn to the Phantoms and open fire. They're slippery and hard to hit, so use powers to either slow them down, knock them off balance, or slow down time (if you're a Soldier). Combine your squad's powers to maximize damage and stay on the move as much as possible to avoid getting sliced and diced.

## APPROACH 2: FIGHT LONG-RANGE FIRE WITH LONG-RANGE FIRE

Nothing is more satisfying than beating a Nemesis at her own game. Sniper-proficient classes such as Infiltrators and Soldiers can equip their most powerful sniper rifle, such as a level IV or V M-98 Widow, and take aim at the sniper on the far ledge. If you're an Infiltrator, activate your Tactical Cloak before you zoom in. Soldiers should activate Adrenaline before taking aim as well.

If you're another class such as an Engineer or Vanguard, use a combat drone or your squadmates as bait. Wait for the Nemesis to pop his head out to take a shot, then tag his head with a well-placed shot.

The Phantoms are also susceptible to a sniper's headshots, but to ensure they die at the end of your sniper's scope, order your squad members to attack them with power combos and weaken them prior to your shot. Even if you don't get a headshot, your squad's attacks should either slow them down or bring them to the brink of defeat, so even a glancing shot will put them down.

### ITEM REQUISITION

There are some **Parts** you can salvage for credits amid a pile of burning rubble in the hall on the right. Immediately after entering the next room to explore Sanctuary, turn left to find a **Medical Station** on the right wall.

Enter the Sanctuary through the door at the far end. As you enter, you spy several more Cerberus shuttles departing from a distant tower. The area around you is quiet, however, so you're free to explore. Begin by checking the Log at the far left side of the reception area. It shows video footage of the hundreds of refugees seeking help in Sanctuary. When you're done, walk over to the desk area on the right, just right of the stairs, and examine the Logs and the PDA there to get more information on Sanctuary.

#### TIP

You can also stop at the large window to the left of the entrance to the welcome area and click to engage in a short dialogue with your crew.

#### ITEM REQUISITION

Check the desk immediately to the right of the stairs. You'll find some **Inventory Logs** you can salvage for credits.

#### NOTE

There are two more Logs downstairs near the two crashed shuttles. Examine them if you want to hear more about Sanctuary and what transpired there.

Go downstairs and turn right into the next room. You'll find several Cerberus Assault Troopers lingering about. They aren't much of a threat, so overwhelm them quickly and clear the room.

#### ITEM REQUISITION

Pick up the **Pistol Scope** near the dead body in the center of the room, then turn left to go into the now-open door.

After entering the next area, turn right immediately to find an **Equipment** console on the wall. Salvage it to gain some credits.

Make a left into the next area and stop at the computer console near the entrance. Activate it to view a short video of

Miranda. She claims that Sanctuary is not a refugee camp after all. It's a Cerberus testing facility run by her father. After watching the video, turn right and walk over to the water pump. Activate it to empty the large body of water nearby. It reveals a ladder going down to a secret passage leading to the facility interior.

#### NOTE

If you went to the Citadel after receiving Miranda's e-mail earlier in the game, this may shed some light as to what she was trying to uncover. In fact, you *need* to speak to Miranda while on the Citadel to learn this information.

#### ITEM REQUISITION

There's a second **Equipment** console on the right wall shortly after entering the tunnel leading into the secret facility.

Salvage it as you go. Also look to the left of the second door to find a **Rosenkov Materials Shoulder Guard** armor piece.

## FACILITY INTERIOR

The facility's interior is cluttered with machinery, computer consoles, and tanks for various types of strange experiments. Activate the center console in the first room to turn on all of the computer screens around you. One of the consoles turns the lights on in the next room, a massive chamber full of Husks.

It's clear that Cerberus is not just studying the Reapers, but also experimenting on them, perhaps even creating them.

Walk into the next room and check out the PDA on the counter. Then go down a bit farther and activate the console on the far side. This plays a video of Miranda scrambling around the facility. Unbeknownst to her, she's being followed by Kei Leng.

Go down the stairs and open the door. Several Husks pour in from the next room as the door slides open, so either back away as you shoot the attacking Reapers or use a power like Nova to knock them all away. Charged melee attacks also work against these creatures, so eliminate them quickly before they can swarm around you.

Creep into the next room and turn left. There may be some more Husks rushing up the stairs toward you. Eliminate this group as well. With the room clear, continue downstairs and examine the two Logs on the desks before entering the long experimentation chamber.

### TIP

**There is a large machine that periodically drops down across the chamber's center. When it does, it blocks your line of sight across the chamber, so time your attacks in conjunction with the machine's pattern to maximize your damage output.**

## EXPERIMENTATION CHAMBER

This long chamber is still crawling with Reaper forces from the invasion. The long, wide chamber has several platforms running along the top left and right where Marauders can attack from a distance. Meanwhile, a Ravager and a Banshee slowly stalk up and down the center section of the chamber, launching their devastating assaults. The chamber, however, has a series of labs running along the right side that can provide a respite from the action and lots of tubes, consoles, and other equipment running down the middle that can provide cover.

### APPROACH 1: STAY IN THE CENTER

The long chamber has plenty of places for you and your squad to seek cover. Press your back against the center crates near the chamber entrance and get a good view down the length of the chamber. Order your squad to engage the Banshee while you target the Marauders. Make sure to take them out first. They can create a lot of problems for you while battling the other Reapers on the lower level.

If any Marauders drop down to the lower level, use powers like Singularity to create choke points near the center aisle and redirect them. Eliminate the Marauders first, then turn to the Banshee.

Keep her off balance and split her attention by focusing all of your squad's attacks on only her. Stay on the move—duck back into the first lab if necessary—and avoid the Banshee's radial attack that removes your shields. If you keep her off balance and follow up with heavy fire and explosive power combos, she'll fall in no time. With the Banshee gone, you can now turn to the Ravager and destroy it from the safety of your covered position.

### APPROACH 2: STALK THE LABS

If the center section is too crowded for your taste, use the labs running along the right side of the experimentation chamber to get a jump on the enemies in the center section. Open the door to pass from one lab into another, then turn left to face the chamber's center section. Stay behind cover of the consoles separating the lab from the center section, and launch your assault on the Ravagers and Marauders from here.

Since you're behind decent cover in the labs, order your crew to attack the Marauders with power combinations or use powers to pressure them off their elevated positions. When they come down, increase the intensity of your attacks by either lobbing grenades or using power combos of your own. If you get far enough in the second lab, you can get a good view of the Marauder perched atop the left side of the center section. Bring him down if your squad hasn't already, and exterminate it.

Once the Marauders are down, turn all of your attention to the Banshee. The Ravagers will continue to fire on you, but they won't move as much as the Banshee will. The Banshee will attack you up close, so use powers like Concussive Shot, Shockwave, or Nova to keep her at bay and follow up with heavy fire and other power combos.

Finally, with the Banshee out of the way, turn on the Ravager. The lab provides an excellent vantage point from which to attack from a covered position and eliminate the Ravager's missile attacks. Stay covered and pepper it with attacks until it falls.

#### ITEM REQUISITION

Turn left at the end of the experimentation chamber and enter a small lab. In the lab's far left corner is a **Med Kit**.

In the next room, you'll also find some **Research Data** that you can salvage.

Examine all the Logs in the room at the chamber's far left end before exiting through the door on the right. This leads to a small laboratory with a computer console showing a static-filled screen. Fix the screen to show Miranda's findings about the Sanctuary facility. After activating the console, examine the PDA on the desk on the left.

Go up the stairs on the left and begin searching the facility's perimeter. Turn left at the top of the stairs and you'll find entryways to two hallways, side by side. Each hallway leads into a bifurcated lab room full of Cannibals, Marauders, and barrier engines that feed their shields.

Station one or two squadmates near one hallway entrance while you take the other. Since the Reapers in the long halls are fed by barrier engines, eliminate the engines first. Once the barrier shields are down, turn your attention on the Reapers down the halls.

Hold your position at the entrance to the halls and let the Reapers come to you. Alternate between using heavy fire and power combinations to keep the Reapers away and steadily dwindle their health. If you have the ability to use Defense or combat drones, launch one deep into one or both of the halls, and distract the Reapers even more. When the Reapers turn their backs to you to deal with the drones, increase your attacks to obliterate them.

When the Reapers bunch up together, take advantage and use explosive attacks to dish out damage to the group rather than just one foe at a time. Also use powers like Shockwave and Throw to hurl enemies back down the hall and away from the entrances where you and your team are taking cover. Eliminate all the enemies, then go into the long bifurcated room.

#### ITEM REQUISITION

Before leaving this lab area, pick up the **Shotgun Blade Attachment** and the **M-12 Locust** on the desks along the right hall.

Examine all the Logs and the PDA in the room, then activate the console at the far left end. Watch a video recording of Miranda's findings, then locate the ladder directly behind you. Go up the ladder to reach the next floor.

## TOWER APPROACH

After climbing the ladder, you reach another long hallway. This hall, which is split into three parallel sections, leads to the tower access point. On the left is a raised platform running about three-quarters the length of the main center hall. Down and on the right of the main hall is a side passage, split in the middle by a bridge. The passages on the right, however, are lower in elevation than the main hall. Between you and the tower access point are several Cannibals, Marauders, and Ravagers.

### TIP

This hallway also has several barrier engines hanging from the ceiling. Destroy them as you go to make sure your team can destroy the Reapers in this area.

## APPROACH 1: SPLIT UP

Since there are three ways to approach this section, and you have three members of the squad (including you), split the team among all three hallways sections. This tactic is better suited for players who feel comfortable engaging in close-quarters combat, since you'll have to slowly advance down the hall, pressing the action forward.

As you do, you'll also need to direct your team from cover to cover, which may allow speedy Marauders or Cannibals to get within close proximity of your position. Knock enemies away and slowly march your entire team down all three sections of the hall.

Rely on disruptive powers to keep your enemies away while you advance down the hall, inflicting damage and putting them down with shotgun blasts or explosive power combos between your squad members.

## APPROACH 2: USE THE TWO LEFT HALLS

An alternate approach is to avoid the lower section of the hall altogether. Since it is at a lower elevation than the other two halls, you'll gain a bit of cover, but at the cost of a better line of sight. Instead, post two squad members near the beginning of the far left hall, while you take the fight down the center hall. Clear a path to the far end, then turn left and swoop back around the end of the hall's far right section.

This way you'll pinch the enemies attacking your squadmates in the far right hallway from both ends. Press the fire inward and wipe them out. This is also a good tactic for luring the Ravagers away from the center hall.

## APPROACH 3: USE THE RIGHT HALL AND ITS BRIDGE

Sharpshooters can use their squadmates to lure some of the enemies down into the hall's lower right section. As the Reapers engage your squad on the lower level, rush to the bridge that splits the lower hallway into two sections and open fire from above. Snipers, assault rifles, and destructive powers like Cryo Blast or Incinerate will work wonders from this elevated position.

Just make sure you've got your flank covered, since clever Reapers like Ravagers or hungry Cannibals can still rush you from the center hall.

### ITEM REQUISITION

Enter the next lab and immediately turn right to find a **Medical Station** on the wall. Several of the testing pods

in this area also have **Research Data** and Logs you can examine before hopping onto the disabled tram.

Pass through the next room at the hall's end and make a right. On the other side of this door is a disabled tram. Hop onto it and shoot open the small control console at the front of the tram. Activate it and the tram speeds toward the tower entrance. Jump off the tram to the left when it stops and enter another long testing room. This hall leads to the tower entrance.

## TOWER ENTRANCE HALL

This long hall is not much different than that found in the "Tower Approach" section. The only difference is that this section is about half the length of the previous, and the lower right area is already partly demolished. The main difference in this area are the enemies. Instead of Cannibals, Marauders, and Ravagers, you're tasked with clearing out Brutes and a Banshee before reaching the tower entrance.

### APPROACH 1: BRING OUT THE BIG GUNS

Since you're facing several Brutes and a Banshee at once, your only chance to survive is to bring out all your big guns. Unleash everything from combat drones and decoys to Frag Grenades and Nova blasts to keep the Brutes busy. Stay on the move as much as possible, and lead the Brutes away from the Banshee to create some breathing room. If you allow the Brutes and the Banshee to trap you, a single blast from the Banshee or a swipe from the Brutes will leave you defenseless. Once your shields are down, another attack can finish you off.

Blast the Brutes with everything you've got, then sprint past them to create some distance. Rush down empty sections of the hall, then turn around once you're far away and resume your attack. If necessary, assign your toughest squad member to engage the Banshee and keep her busy momentarily while you carefully wear down the Brutes.

Use every section of the hall. Sprint across the lower right hall, up across the center section, and attack from the top left. As you dash around the entire area, the Brutes will stay on the chase and slowly lose ground. Eventually, you can put down all of the Brutes, leaving only the Banshee to contend with.

Split up your team and divide the Banshee's attention across both ends of the main hall. Rush back and forth, using the left and right sections, between the front and back ends of the main hall as you steadily inflict damage on the confused Banshee. Keep picking away at her until she falls.

## APPROACH 2: SPLIT UP THE ENEMIES

An alternate approach is to take down the initial two Brutes before proceeding too far into the combat. If you move too close to the preoccupied Brute and Banshee, they will turn their attention toward you instead.

This reduces the number of hard enemies you need to fight from four at once to two waves of two.

ITEM REQUISITION

Pick up the **Med Kit** in the hall's top left section, then walk down to the Pod Status console. Activate it, then override the pods to unlock every pod in the center hall. Once they're all unlocked, rush back to the beginning of the main hall and examine the pod

on the left. Inside is the **M-99 Saber** assault rifle. The room at the hall's end, near the tower entrance, also has some **Research Data** you can salvage.

TIP

Even though it has a lower rate of fire, the **Saber's** damage rating is incredibly high. Treat this more like an assault-sniper rifle hybrid.

Turn right and step into the elevator leading to the tower. Upon reaching the tower, you find Miranda; her father, Henry Lawson; and her sister, Oriana. Henry is holding Oriana hostage, and it's up to you to either talk him down or put him down.

The ensuing conversation can yield Paragon or Renegade points. If you try to reason with him, you can gain Paragon points. Threaten him, and you gain Renegade points. Regardless of what Paragon/Renegade decision you make, Miranda ends the conversation on her own terms.

NOTE

If Miranda was killed in *Mass Effect 2*, the scene plays out between just Oriana and her father.

BACK ON THE NORMANDY

Back on the Normandy, Admiral Hackett had reservations with your choice to visit Sanctuary. Still, thanks to Miranda, you're now able to trace Kei Leng to the Illusive Man's base. It's time to take Cerberus out of the war.

NOTE

If Miranda didn't survive during *Mass Effect 2*, then you must rely on the shipping information uncovered in the father's office.

## ACT 3—PRIORITY: CERBERUS HEADQUARTERS

The Illusive Man's headquarters have been located, and the Alliance is prepared to attack to recover the Prothean VI that holds the key to the Catalyst. Once the attack is launched, the Alliance will be fully committed to the final fight against the Reapers. Assault the base when ready.

## MISSION BRIEFING

**Battlegrounds:** The battlegrounds in this mission vary from wide-open areas with multiple lanes of attack to tightly cramped walkways forcing you to engage in head-on battle. Players who feel comfortable with diversity in action will do very well during this mission.

The battle picks up quickly as you face multiple Atlas Mechs, Centurions, and Assault Troopers. Luckily, the hangar bay's a wide-open arena with plenty of cover lining the sides. Use flanking maneuvers or create a cross fire to catch enemies. Vanguard players can use the wide-open area to rush to and fro as they demolish enemies using Biotic Charge.

Despite the seemingly labyrinthine corridors of the base's sublevels, you'll have plenty of room to maneuver and engage enemies from mid to close range. Turrets and force fields may make things difficult, but clever players with a wide array of destructive power combos will survive with ease.

About mid-mission, you will encounter a unique battle where you'll be forced to engage Phantoms, Assault Troopers, and Nemesis fighters in tightly cramped catwalks. With no choice but to move forward, aggressive players will cut a swath across the walkways, stopping only to look back in the event that you're being flanked.

**Consequence Overview:** Pre-mission, there aren't many options to gain Paragon/Renegade points. As the mission concludes, however, you'll speak with the Illusive Man and have the option to gain a few Paragon/Renegade points as well as use a Paragon/Renegade persuasion. If you've managed to persuade the Illusive Man across all other conversation, do so now to maintain your momentum.

### **Spoiler Alert: Paragon/Renegade**

At the end of the mission, you'll also speak with the Prothean VI one last time. During this conversation, you'll get a chance to use a Paragon/Renegade interrupt. The Renegade interrupt will happen first, so don't use it if you want to use the Paragon interrupt.

## AROUND THE GALAXY

### Mission Unlocks

None

### Mission Locks

All remaining missions close as soon as you launch the assault on the Illusive Man's base.

## WAR PREPARATIONS

There's nothing left to do but move forward with your assault. As Admiral Hackett explains, launching the assault on the Illusive Man's base is an "all-in" situation. You've reached the point of no return.

If you'd like to get straight to the next mission, skip to the "Assault the Illusive Man's Base" section later in this guide.

### SPEAK WITH DR. CHAKWAS

The end may be near, but that doesn't mean the mood can't be celebratory. Stop by the medical bay and speak with Dr. Chakwas (if she's on your crew). She'll suggest having a bottle of wine before the next mission. If you choose to do so, you can earn some Reputation points.

#### PREVIOUSLY IN MASS EFFECT

This interaction mirrors another possible interaction you may have had with Dr. Chakwas during *Mass Effect 2*.

### SPEAK WITH TALI

Tali isn't feeling too hot after the events on Sanctuary. Visit her on the port observation deck as she sits alone at the lounge. Speak with her.

### UPGRADE WEAPONS AND REASSIGN POWERS

This is it, your last chance to purchase weapon and mod upgrades, or reassign powers. If you have any powers with points in them that you don't use, spend a few credits to reassign all of your points and maximize their value.

## ASSAULT THE ILLUSIVE MAN'S BASE

When you're ready to assault the Illusive Man's base, go to the galaxy map and fly to Anadius in the Horsehead Nebula. Land on Cronos Station to get a priority communication from Admiral Hackett. He warns you that as soon as you launch the assault, there will be no hiding the Crucible from the Reapers, so you'll be going "all in." If your mission on Cronos Station fails, then your only course is to launch an all-out assault on Earth and hope for the best.

### TIP

As soon as you select "We go now!" during the conversation with Admiral Hackett, all bets are off and there's no turning back. Be sure that you've completed every mission you want to complete, purchased any weapon or mod upgrades, reassigned powers, or equipped specific armor before selecting this dialogue option.

## LAST CHANCE FOR ROMANCE

If you've engaged in a romance with any character, your love interest will come to your cabin the night before the assault on the Illusive Man's base and offer to spend the night. You can turn down the offer if you'd like, without the risk of losing the relationship, but you will lose the chance opportunity for one last chat the following morning.

## DREAM SEQUENCE 3

The weight of the galaxy is not easy for anyone to bear, even someone like Commander Shepard. At night, you're haunted by another dream, this one more violent than the first two.

Once again, you have control of this dream sequence, but you don't have to do much. Simply follow the child as he runs from place to place until the dream ends. If you've engaged in a romance with someone and asked them to stay the night, then speak with your lover one more time before setting out on the mission.

## ALL FORWARD!

Prior to the mission, EDI meets you in the war room. She insists that she must accompany you on the mission in order to increase your chances of success. Given her history with Cerberus, she's right. No other person on your crew has the wealth of information on Cerberus as she does. She's also well equipped to hack any security systems that may be in place.

## CERBERUS SHUTTLE BAY

When you crash-land in the Cerberus base's docking station, the troops are ready for your attack. The bay is guarded by Cerberus soldiers of nearly every type. The docking station is wide, with alleys along the left and right side where you can take cover behind partitions. The center has a large, circular ship-launching platform and several small crates surrounding it.

### APPROACH 1: TAKE THE CENTER

The majority of the Cerberus forces will scramble across the center of the docking station to take cover behind crates or the nearby alleys on either side. As they do, unleash your combined powers to slow them down, and follow up with weapons fire. Take down as many Assault Troopers and Centurions as you can before the Atlas comes stomping toward you.

When it does, turn your squad's full attention on it. Split up your team members across the length of the station to confuse the Atlas and split its fire. Keep your squad members on the move by ordering them to a different spot when the Atlas approaches them. As it targets one of your squad members, it'll frequently shift its position and expose itself to attack.

Keep behind cover as much as possible—there may still be a few troopers running around—and focus your attacks on the Atlas.

## APPROACH 2: USE THE ALLEYS, CROSS FIRE

The alley on the right of your landing position is a perfect spot to take cover. Immediately press your back to it and take cover. If any Cerberus troopers are foolish enough to approach you, use a covert takedown to eliminate him quickly. Carefully blast a path down the right alley, using the partitions as cover as you go. Order your squad into the right alley, while you then rush across the docking station to the alley on the opposite side.

From here, you can begin moving up the alley to create a cross fire at the center of the docking station and trap all enemies. Trap the Atlas in your cross fire and force it to keep guessing as you move yourself and your squad up and down the alleys for cover.

### TIP

**The launching fighter removes shields when it flies overhead. You can use this to your advantage when fighting shielded enemies, but be careful, because it will remove your shields too.**

No matter which option you take, when all Cerberus enemies are dead, Cerberus will attempt to vent the hangar. You have a limited amount of time to reach a control console and stop them from doing so.

## CONTROL ROOM LEVEL

Go up the ladder on the left side of the docking bay and enter a small control room. Reach the Hangar Bay Compression Controls console and allow EDI to stop Cerberus from decompressing the hangar bay and blowing you out into space. Despite EDI's success in overriding their commands, she's unable to open the hangar door into the main station. You'll have to blast your way in.

When Cerberus realizes you've stopped their venting attempt, they send in reinforcements. Take cover near the door behind you and wait for the Guardians and Assault Troopers to come rushing in. The area around them is tight and cramped, so either use explosive power combinations or toss a few grenades down the hall to blow them all up at once.

You can also aim through the Guardian's vision slot to get a one-hit kill since he'll be within close proximity. If not, then use powers like Pull to yank its shield away, or use Singularity, Throw, Shockwave, or Lift Grenade to hurl the enemies up and away.

Go down the hall and turn right into the next section. Here, another team of Cerberus goons attacks. This team is comprised of Centurions and a Nemesis. Similar tactics should do the trick here as well. Finally, make a right at the end of this section to find the Rotation Controls console.

# ITEM REQUISITION

Just across from the Rotation Controls console is a **Medical Station**. Open it to grab its contents. Before you head back

down to the lower hangar area, go through the doors just left of the ladder leading down. Inside, you'll find a **PDA** worth a few credits.

When you activate the rotation controls, the ship-launching platform turns 180 degrees and aims at the next fighter plane at the hangar doors. When the ship launches, it'll slam into the doors and breach them.

Make a left and go through the next set of doors. They open to a ladder leading back down to the lower hangar level. Go down and hit the Clamp Release button at the base of the ladder to launch the fighter plane through the hangar doors and into the main facility.

## ATLAS BATTLE

The explosion gets the attention of nearby Cerberus forces, and an Atlas Mech comes stomping in from the hole in the hangar door. At the same time, two Assault Troopers rush down the ladders from the levels above and make a mad dash to the bay's left and right corners. The two Troopers are rushing to the empty Atlas Mechs in the corner of the room. Stop them.

Immediately, order both of your squadmates to distract the Atlas while you use the side passage to reach the far end of the hangar bay. When you do, quickly overwhelm the Assault Troopers before they can get inside. Use power combos to blow them up, or use single power attacks like Stasis (or even Adrenaline Rush) to slow down the action.

Once they're out of the way, get inside one of the mechs and turn its awesome weaponry on the Atlas attacking your team. A few well-placed missile shots should do the trick. Once the hangar bay is clear, go through the hole in the hangar doors toward the fiery blaze.

## TIP

If you're unable to stop both Atlas pilots before they reach their Mechs, you can still use a sniper rifle, preferably one that has been upgraded and modded, to shatter the cockpit glass and take the Atlas for yourself. This may take a bit more skill and planning, but at least you'll still be able to pilot a Mech and make short work of the other two Atlases.

## ITEM REQUISITION

Shortly after crossing the destroyed hangar door, you'll find an **M-37 Falcon** assault rifle. This assault rifle is

unlike any other weapon you have. It fires heavy projectiles and has a decent rate of fire, and the projectiles explode on contact increasing damage. In some cases, if they don't hit their target directly, they can ricochet off walls before detonating.

Order EDI to open the door on the left. As she does, she taps into the facility's communications system and is able to spy on Cerberus's movements about the base. She alerts you that Cerberus has redoubled its efforts to stop you, but with her on your side, they can only slow you down. Go down the hatch when you're ready to proceed to the central lab.

## TIP

This interaction with EDI grants you an opportunity to either thank her for her efforts or keep her focused on the task at hand.

## SUBLEVEL, SECTION 1

The sublevel of the base is dark and full of winding passageways. Before your arrival, Cerberus combat engineers took position inside and started getting into place, setting up turrets along the way. They're accompanied by Assault Troopers and Centurions.

Despite being stuck in the base's cramped lower level, you've got plenty of freedom to move around. The pipes running across the floor and the tanks lined in short rows allow for a wide enough path full of cover from which to safely attack and defend. Take cover behind the pipes and follow them across the room, sidestepping the Cerberus troops.

Maneuver your group across the room, attacking as you go, until you spy the Nemesis at the level's far end. When you do, take cover and flush it out of cover, then attack. If you've got a sniper rifle equipped, zoom in and take it out with a headshot.

After you deal with the Nemesis, press deeper into the room and keep the pressure on the remaining Assault Troopers. Take cover near the L-shaped pipes that come down from the ceiling and flush out all remaining foes on this level.

Order your squad to take cover with you in this L-shaped cover; you'll have a great place to fend off foes. Move from one side of the L-shaped pipes to the other, clearing out enemies as you go until the room is empty. Go up the ladder at the far end of the sublevel when you're ready.

# ITEM REQUISITION

Just behind the ladder leading to the top level are two items worth picking up. Salvage the **Terminal** to gain some credits, then open the **Medical Station** to acquire its contents.

After climbing the ladder, stop by the computer console near the next doorway while EDI opens it. The console has three entries, all about Project Lazarus. You can check out all three or none if you choose. When you're done with the console, EDI will open the door and allow you access to the next area.

The trip to the top level doesn't last long, as the next section has a massive hole in the floor. You'll have to go back down to the sublevel for this next section.

# ITEM REQUISITION

After EDI grants you access to the next area, look around for the **Serrice Council Greaves**. Pick them up and keep moving.

## SUBLEVEL, SECTION 2

Turn right into the large burning section of hallway and follow it down to the next section of the sublevel. This sublevel isn't lower than before; it's just another section of it. When you set foot into this section, the Assault Troopers waste no time opening fire.

They're the first line of offense as the Combat Engineers set up their turrets. Send your squad ahead and mow down the Assault Troopers on your way to the Combat Engineers. If you get past the first line quickly, you can reach the Combat Engineers before they're able to fully deploy their turrets.

## TIP

Vanguard players can clear this area extremely quickly using **Biotic Charge** and **Nova** combos. Simply charge from **Combat Engineer** to **Combat Engineer**, penetrating deeper into the level and interrupting their progress as you go. If the initial charge doesn't destroy them, follow up with **Nova** to finish them off. **Nova** will also have the added bonus of knocking away other nearby enemies. If you begin to lose shields, simply use **Biotic Charge** again to replenish them.

Fire on the Combat Engineers first to interrupt their progress and leave the turrets disengaged. If they manage to deploy the turret in time, hurl a grenade or use explosive power combos to blow them up. EDI's Decoy ability can also help distract deployed turrets in this lower area.

Make a left and spot the next Combat Engineer. If they're standing next to a shield pylon, destroy the pylon first (they work like barrier engines), then focus your fire on the nearby enemies. Continue carefully picking off turrets and Combat Engineers until the path to the far ladder is clear.

## TIP

You can also use corners and generator-powered shield barriers to protect you from fully deployed turrets. If you position yourself just outside of its field of vision, you can use a corner to protect yourself while you get a direct shot at the automated machine gun.

Also, if you destroy the generators, it will disable the shield barriers, making it easier to attack hostile troops taking cover behind them.

Stop when you reach the ladder to the top level and take cover. Wait for several Centurion soldiers to come rushing down the ladder. Ambush them as they descend. Go up the ladder to the top floor.

Once again, EDI needs to unlock the passage to the next area, and there is a video console nearby. Access the console to view up to three videos. This time, the videos are not about you or the Lazarus Project, but rather about EDI and Dr. Eva. You don't have to watch the videos, but if you do, you may gain a new appreciation for your synthetic ally. When you finish with the video console, EDI is done opening the passage to the next area.

## PREVIOUSLY IN MASS EFFECT

If you saved Jack in *Mass Effect 2* but missed the Grissom Academy mission, you will find an additional PDA in the room with EDI's information log. The audio log will tell you Jack's fate if you did not help her out at Grissom Academy.

## ITEM REQUISITION

There is a PDA on the desk before you reach the next door. Activate it to acquire some useful credits.

There is also a Medical Station in this room on the left-hand wall. Exit through the door and turn right. All the way across the hall is another door on the right. Go through to find a Med Kit and the Demulcore Overlay in a demolished room.

There is a third Cerberus Video Log console in the room attached to where you find the Med Kit and Demulcore Overlay. Access it and you'll see video footage of the Illusive Man and, Kai Leng. Kai isn't happy with the events on Thessia; he's still itching for a fight.

Back out in the main hall, you'll find a blue-lit shaft leading down to the lower level again. Drop down to find a series

of walkways leading up and out, past a large proto-Reaper dangling from the facility's roof. It's currently powering the facility and poses no threat. The conversation between you and your squadmates may help shed some light on the Illusive Man's current motivations. If you've brought Liara, she may even give you perspective from one that has lived in the shadows, just as the Illusive Man does.

## PREVIOUSLY IN MASS EFFECT

These are the remnants of the human proto-Reaper that Shepard faced at the end of *Mass Effect 2*. Rather than leave the hybrid creature to rot, Cerberus salvaged it and is now using it for its own purposes.

## PROTO-REAPER CHAMBER

The walkways around the proto-Reaper's chamber are narrow and don't offer much cover, save for the small partitions along the sides. Luckily, you'll be facing Nemesis Troopers, Assault Troopers, and Phantoms in this section, so they'll be limited by the narrow catwalks just as you will.

Turn left at the corner and begin walking down the catwalk. Target Phantoms and Nemesis soldiers first. Because the catwalks are so narrow, the Phantoms will be forced to attack you head-on. Use your team's powers (Singularity, Shockwave, Throw, etc.) to knock them off balance and off guard. If you have grenades, use those as well. Once the Phantoms are vulnerable, unload heavy fire on them to put them down.

Nemesis soldiers will stay near the catwalk's far end to maximize the length of the catwalk and snipe at you. Return the favor by using sniper-rifle fire or other long-range powers to take them out. Keep your squad moving down the catwalks steadily; this will pressure the Nemesis, allow you clean shots at the Assault Troopers, and keep the Phantoms readjusting to your movement.

As you progress, enemies will attempt to rush you from behind. There is a series of catwalks below you as well, and the Troopers will use them to run past your position and appear from behind you. Keep your line staggered as you move so that you could easily keep an eye behind you as well. The closer together you are, the easier a target you become for the enemy.

Also keep an eye across the long U-shaped catwalk for enemies perched on the other side. Pick them off before they get you. Go all the way around the catwalks, taking out Troopers as you go until you reach the next ladder.

### PREVIOUSLY IN MASS EFFECT

This fight can contain bonus characters, depending on choices you made in *Mass Effect 2* and *Mass Effect 3*.

Jack will show up as a Phantom if she survived in *Mass Effect 2*, but you skipped the Grissom Academy mission.

Legion Assassin will show up if you sold him to Cerberus in *Mass Effect 2*.

The top level has a few more Cerberus soldiers to contend with, but the path is much shorter. Overwhelm your enemies with close-range fire, power combinations, and grenades until you've cleared a path to the ladder at the other end. If you need to stop and take cover, use the partitions on the left and right sides of the walkways to regenerate your shields.

Make a left inside the next room and find another Cerberus Video Log console near the center of the walkway. Activate it to view three more video files. These videos are about Paul Grayson, a former Cerberus operative.

#### ITEM REQUISITION

After going up the ladder, turn around and go down the catwalk in the opposite direction of the door; you will find some ammo, **Medi-Gel**, and another **PDA** with credits.

#### PREVIOUSLY IN MASS EFFECT

Listen to these video logs carefully. They're about a former red sand addict and ex-Cerberus operative named Paul Grayson. Learn his story from the novels *Mass Effect: Ascension* and *Mass Effect: Retribution*.

#### ITEM REQUISITION

Just left of the video console are a **PDA** and a **Med Kit**. Grab both before leaving this area.

Go through the door at the end of this walkway to find the entrance to the Illusive Man's main office.

## ILLUSIVE MAN'S OFFICE

When you enter the office, you find it abandoned. The Illusive Man escaped before you arrived, but he's still monitoring his base. When you try to access his computer to locate the Prothean VI, the Illusive Man appears through holo-communication.

### TIP

The ensuing conversations between you and the Illusive Man and the Prothean VI will garner Paragon/Renegade points, depending on how you respond to each.

Engage the Illusive Man in conversation during this confrontation and ask him what the Catalyst is. He won't tell you, but he will encourage you to ask the Prothean VI. You can also engage him in a Paragon/Renegade persuasion. The Illusive Man won't change his mind about his plans to control the Reapers, so end the conversation according to your Paragon/Renegade leaning and resume your search for the Catalyst with the Prothean VI.

Listen to the Prothean VI's explanation of what the Catalyst is, its history, and how it works with the Crucible to destroy the Reapers. Unfortunately, he explains that the Illusive Man has already informed the Reapers of your plans to use the Crucible, and they've taken control of the Catalyst before you can get to it.

Just then, Kai Leng arrives at the Illusive Man's office. He's ready to end this fight once and for all.

## KAI LENG BATTLE

Kai Leng immediately attacks, so press the Melee button repeatedly to shake loose of his grip. When the battle begins, Leng is nearly across the entire office, so begin unloading on him from a distance and use explosive power combos to inflict as much damage as possible.

Activate EDI's Decoy ability, and spread your team out across the now-darkened office to give Kai Leng multiple targets all at a distance. Soldiers can use Adrenaline to slow down time and get clean shots at the assassin, while other classes can rely on powers like Stasis, Warp, Throw, and Shockwave to keep Leng at arm's length.

When Kai Leng charges his fist and prepares to recharge his shields, roll away and get out of the radius of his shock wave. He'll slam his fist on the ground and unleash a radial shock wave that can deplete your shields and destroy the ground around him. The shock wave is followed by the arrival of several Cerberus forces: Assault Troopers at first, then Nemesis, and finally Phantoms.

Launch a grenade or other explosive power at the soldiers as they arrive; eliminate them as quickly as possible. Kai Leng will continue to recharge a bit longer while his soldiers hold you off, so turn your attention to them and take them all out before Leng resumes his attacks.

Circle-strafe around the outer edge of the office area, keeping your gun and powers aimed at the enemies in the center and slowly work down Kai Leng's health. Even though he has a long-range attack, Leng prefers close-quarters combat, so stay away (unless you're a Sentinel or Vanguard), and pick him off until he falls.

#### TIP

**Vanguard players can use close-quarters combat to engage Leng and knock off major chunks of health using Biotic Charge, Nova, and charged melee combos. Similarly, Sentinels can use close-quarter weapons like a shotgun and charged melee attacks to knock Leng away momentarily.**

## ONE LAST CHAT

After defeating Leng, you can speak to the Prothean VI one last time. When you do, you'll get a chance for one more Paragon/Renegade interrupt. Back on the Normandy, you speak with Admiral Anderson. He's ready to launch the final attack on the Reapers...and it starts in London, England.

## ACT 3—PRIORITY: EARTH

The Citadel is now in orbit over Earth, in the heart of Reaper-controlled space. A final assault on Earth is the only way to deliver the Crucible to the Citadel and defeat the Reapers. Launch the assault on Earth when ready.

## MISSION BRIEFING

**Battlegrounds:** The battle arenas during this last mission are as varied as ever. You'll fight uphill, across labyrinthine plazas, through war-torn buildings, and across narrow brute-filled alleys, and you'll even find yourself surrounded by enemies at a deadly intersection.

Once again, adaptable players with varied skill sets will have the easiest time changing from one battleground to the next. However, that doesn't mean it'll be easy. You'll fight across the full gamut of Reaper forces all the way from lowly Husks to a Reaper Destroyer.

Conserve your Medi-Gel packs during this mission as much as possible and use them only to revive fallen squadmates. The final few waves of enemies will test you and push you to your limit.

**Consequence Overview:** Although you have a major choice after dealing with the Illusive Man, these choices are all morally gray. You may feel that destroying the Reapers is the Paragon option or that controlling them to leave the galaxy in better condition is the Paragon choice. Regardless of what you choose, you'll get a major Reputation bonus.

### Spoiler Alert! Paragon/Renegade

You can convince the Illusive Man of his own indoctrination, after which he ends his own life (by either shooting himself or by storming directly into your line of fire). This is actually a series of Paragon/Renegade persuasion options that get progressively harder. To complete the final persuasion successfully, you must have used a persuasion on the Illusive Man in every one of your earlier conversations—on Mars, Thessia, in the Illusive Man's base, and the three previously in this conversation.

## WAR PREPARATIONS

Commander Shepard has fought through horrific resistance to reach the Citadel, only to end up in a standoff with the Illusive Man, who now has the ability to indoctrinate humans and control their actions. Shepard must deal with the Illusive Man, then activate the Crucible and decide the fate of the Reapers...and the galaxy.

If you'd like to get straight to the next mission, skip to the "Order Fleets to Earth" section later in this guide.

## FINAL UPGRADES

This is it. The last chance to get upgraded weapons, mods, or reassign powers before the end of the line. Stop by the shuttle bay if you want to make any last-minute purchases, or visit the medical bay to reassign powers. There's no turning back here.

### NOTE

At this point, the Galaxy Map will have only one option open: "Order Fleets to Earth."

## ORDER FLEETS TO EARTH

Just before the assault on Earth, Admiral Hackett comes aboard the Normandy. He readies the fleets to attack and gives one more rousing speech in preparation. After Admiral Hackett's speech, you'll speak with Admiral Anderson over vid-com. In order to reach the Citadel, you must get to the Citadel Beam with a ground force (code-named Hammer). However, London is being guarded by several Hades Cannons. You must bring a smaller landing force to take out the Cannons so the main Hammer force can land and make an assault on the Citadel Beam.

En route to Earth, a cutscene will show all of your efforts in recruiting the various species come to fruition. Joker calmly lists all of the fleets as they report for the assault.

### NOTE

Listen carefully to Joker's dialogue here. He rattles off the names of all the fleets you were able to recruit. This segment is a direct testament to your actions throughout the game. A series of short cutscenes will also show some of the aforementioned species readying for battle.

Though the galactic fleet is ready, the sheer number of Reapers in the area are overwhelming. The Reaper forces begin to shred through the left flank with ease, if your Effective Military Score is low. They overtake massive ships and crush them as if they were nothing. That's when Joker seizes the opportunity and breaks off from the fleet and sets a direct course to Earth.

Your shuttle manages to penetrate the Reaper forces guarding Earth, but before the shuttle accompanying yours can land and disable the Reaper's Hades Cannon, it gets shot down. That cannon is now your responsibility.

## DISABLE THE HADES CANNON

Cortez drops you off at the base of the steps leading up to a large courtyard. Unfortunately, you've gone from the pan into the fire. You begin this battle in a lower position than your enemy, and you're greatly outnumbered as well. This is not going to be an easy battle; in fact, it's going to be an uphill battle, literally.

### TIP

If you have **Cryo Ammo** or **Cryo Blast**, or a teammate with those abilities, rely on it heavily during this mission. If sufficiently upgraded, both powers can freeze enemies temporarily and take them out of the fight.

### APPROACH 1: CREATE AN OPENING

If you're comfortable with your ability to take damage and forge ahead, then don't wait for the Reapers to let off before you clear out of the starting area. Deploy drones or decoys ahead of you (or send your toughest squad member if you don't have the ability to launch drones), then leave cover and follow behind them.

Open up with grenades or explosive power combinations to begin clearing a path. If you're taking damage from your right side, assign a team member to cover that side, then continue your careful march up the hill. Your goal is to punch through the first wave of enemies at the top of the small hill and establish a position near the top. From here, you can take cover and plan your move into the plaza.

### APPROACH 2: TURTLE

Cautious players can opt to stay behind the minimal cover at the bottom of the hill, where Cortez dropped you off, and sustain the first few waves of enemies as they attack. They may try to overwhelm you with heavy fire, so stay behind cover and pick your shots carefully.

Use explosives to take out multiple enemies at once. If you try to take down only one at a time, you'll end up pinned and eventually run out of ammunition. Instead, rely on powers to dish out the majority of damage, then finish off enemies with the least amount of ammunition possible.

This particular tactic may be a bit more effective at higher difficulties where careful ammo rationing is essential and enemies take more hits to kill. Once you've dwindled their numbers significantly, leave your cover and rush to the top of the hill where you can launch your assault on the plaza.

## PLAZA

The hilltop leads to a long plaza. Several gates, short walls, planters, and posts create sections within the plaza where you can take cover and slowly advance to far right corner where a landslide of rubble leads to the Hades Cannon. Along the plaza's far right edge are a series of buildings that can provide excellent cover and serve as an avenue to the plaza's far end. The area will be swarming with Marauders, Brutes, and Cannibals, so keep to cover as much as possible no matter which approach you decide to take.

### APPROACH 1: STAY BACK

As soon as you reach the hilltop and enter the plaza area, make a right U-turn and head toward the back of the plaza. Do not advance into the plaza yet; instead, hang back for a bit behind cover and get a wide view of the plaza ahead. From here, you can spot Reapers as they come.

When the Brute attacks, use drones or decoys to distract it while you decimate it. If it targets you or a teammate, carefully lead it across the back end of the plaza and force it to navigate the many walls and partitions. With the Brute out of the way, you can turn all of your attention to the remaining Reapers, the Marauders and Cannibals.

Slowly move the entire squad forward, up to the first row of walls and fences, and take cover. From here, you can begin pressing the action forward. If you are a sniper-proficient class, equip your long-range weapon and begin picking off foes at the far end.

When the second brute attacks, you can engage it directly and overpower it using the combined efforts of your entire team, or once again, use cat-and-mouse tactics to distract it while you systematically deplete its health.

### APPROACH 2: CROSS RIGHT, GO INSIDE THE BUILDINGS

Upon reaching the hilltop, turn right and cross the plaza to the right. Engage the Brute directly and either slow it down as you approach or overwhelm it with explosive power combinations and heavy weapons fire. When you reach the plaza's far end, duck behind the short concrete wall for cover and use grenades or other explosives to dwindle the number of enemies across the plaza.

When you reach the plaza's far right edge, leap over the shattered window's edge and into the building on the right side. From here, you and your entire squad can aim left, back across the plaza, and open fire on the Reapers. Alternatively, you can leave your squad outside and direct them from cover to cover as you slowly move across the interior of both buildings.

By leaving one or both members of your squad outside, you can create a cross fire across nearly the entire plaza by moving them down the plaza while you shift right down the building interiors. Slowly move all the way down, and clear out the plaza until you reach the far end.

Go up the rubble incline at the far end to reach the shuttle crash site near the base of the Hades Cannon.

## CRASH SITE

The shuttle crashed near the base of the Hades Cannon. From here, you can see the massive cannon, towering over the landscape like a high-rise. The area is full of Cannibals, so take cover and wait for the cannon to stop firing. During the lull in cannon fire, pop out of cover and begin clearing a path toward the area's right corner.

Soldiers can use Adrenaline to slow down time, while Infiltrators can sneak past several enemies at once with the use of their Tactical Cloak. Similarly, Vanguard and Sentinel can get into the mix by rushing into the fray and using melee attacks to take them down.

Engineers, or groups with Tali along, can send out drones to take some of the fire while you and your squad move toward your target destination—the far right corner. There you will find the **M-920 Cain**.

Leave the Ravager for last and use your entire squad's combined powers to overwhelm it. Attack it from all angles, behind the safety of cover, and finish it off to get a clear path to the M-920 Cain.

Stay behind cover as much as possible, and target the Cannibals first. They are more apt to rush you than the Ravager at the far end or the Marauders. The Cannibals are also capable of resurrecting once they've been downed, so take them out quickly and don't let them rise again.

Even though the area may be cluttered with debris, you can still use your sniper rifle to eliminate Marauders at the far end. If you don't have a sniper rifle, then use destructive powers like Incinerate, Cryo Blast, or Warp. Otherwise, things like Cryo or Incendiary Ammo work great during this encounter.

### ITEM REQUISITION

The **M-920 Cain** is a special weapon designed to take out massive targets like the Hades Cannon. Also pick up the **Med Kit** when you grab the Cain.

The M-920 Cain has only one shot, so aim at the Hades Cannon, charge the shot, and let it loose. It'll hit the machine and destroy it instantly. If you should miss with your first shot, pick up the other M-920 Cain and take a second shot. With the Hades Cannon down, you draw the attention of dozens of Reapers.

## SURVIVE

Your best bet for survival is to stay close together and fend off the swarms of Reapers as a team. Don't spread out too much in this mazelike area; instead, direct your squad to take cover behind the small table on the right and the short wall on the left and wait for the area to quickly become overrun by Cannibals from the opposite side and eventually, a Banshee.

Combine your firepower on the Banshee first. She'll attack from the far right side, and her radial shock-wave attack can remove your entire squad's shields, rendering all of you vulnerable to the Cannibals' fire. If you take her down first, you'll have an easier fight ahead of you.

If you only used one Cain to take down the Hades Cannon, this fight can be made a lot easier by using the second Cain to kill the Banshee before she gets close.

Once the Banshee is down, carefully shift the entire squad behind cover, facing the area's far right edge. As soon as the escape shuttle

arrives, hurl a grenade ahead of you to clear out some space between you and the shuttle. If you don't have any grenades, use either a power like Nova (if you're a Vanguard) to create some room or use an explosive power combo. Powers like Tactical Cloak or Adrenaline Rush can make it a lot easier to get through the Cannibals. Reach the shuttle to escape, but don't take too long: The Shuttle is under fire and will be destroyed if you don't reach it in time.

## ALLIANCE COMMAND CENTER

Admiral Anderson is aboard your escape shuttle, which grants you an opportunity for a Paragon interrupt moment. You can ask the admiral about the heroism on Earth or steer the conversation directly to either a Paragon or Renegade conversation point.

The shuttle ushers you and your squad to the Alliance stronghold in London. From here you will stage the next phase of your attack. But first, take some time to speak with your comrades before you go.

Before setting out and launching the next phase of this mission, take some time to explore the area around the command center. You'll find nearly every squad member and even some of the faces from past missions, like your krogan friend Wreav.

### ITEM REQUISITION

Before making it all the way down the street and up the ramp of debris on the far end grab the **Data Pad** from the small room on the left in between two of the armored vehicles.

You don't have to speak with anyone before engaging in the next phase of the mission, but doing so gives you the opportunity to accrue a few more Paragon/Renegade points.

# TIP

If you've engaged in a romance with any of your crew, now is also a good opportunity to speak with them one last time.

When you're ready, go up the rubble walkway to the top floor of the building at the lower end, then make a left into the next room. Inside you will find Primarch Victus and some of his turian men. Exit through the door on the left wall to come upon a bridge leading to the command center.

As you cross the bridge toward the command center, several Reapers attack from the area below. Take the turret near the bridge's center and clear out the Reaper attack. They'll rush from the right and left of the long avenue below, so keep the turret moving back and forth until they stop coming. Preventing too many Husks from entering the base provides a small XP bonus.

## ITEM REQUISITION

Just before entering the command center, you'll find a small medical area. Examine the area around the gurneys to find two **Med Kits**. As you walk into the next room you pass a small dark hall to your right. Examine the area a little closer to find a new **Data Pad**.

Follow the series of rooms out until you find Admiral Anderson standing over a staging table. Another Med Kit can be found in his room. Speak with him to trigger the final speech before the mission. Despite missing the bulk of the forces expected, the mission is still a go. The battalion leaders gather around the table and listen to the mission briefing.

The beam leading to the Citadel is guarded by a Reaper Destroyer. The only way to reach it is to cross No-Man's-Land across the city and take it out on foot.

Before setting out on your mission, you have one more chance to speak to your entire squad. You can either treat them like friends and comrades or talk to them like your soldiers. Your next few dialogue choices will gain you a few Reputation points. At your speech's end, you can select your squadmates and prepare for the final mission.

## NO-MAN'S-LAND

No-Man's-Land is a long stretch of London torn apart by Reaper forces. Its path is cluttered with demolished buildings, city rubble, and the dead. Worst of all, it is occupied nearly completely by the Reapers. Upon landing, you're greeted by a line of enemy forces. Duck behind the cover nearby and wait for the Reapers on the wall's other side to pop out of cover.

Use close-range weapons to destroy the enemies nearest your wall, then switch to long-range weapons and powers to take out the enemies on the other side of the far wall. If you need a better vantage point, clear out the area between the first two walls first, then rush across to the second wall.

### TIP

From here, you can also use covert takedowns from behind the cover and eliminate a few more Reapers in your way.

Keep your squad spread out across the entire length of the wall and eliminate all of the enemy Reapers on the landing zone

area's far end. When you do, you can drop down and rendezvous with the Alliance vehicle ahead of you. Before it can get too far, the vehicle is ambushed and blown up, creating a small obstacle.

Stop well behind the burning vehicle and wait for the Reapers to begin surfacing from the rubble ahead of you. Mow down the group

of Cannibals that pop up on the left, and rush forward, just left of the vehicle, to find cover behind a small concrete structure. From here, you can easily spot the Cannibals on the ground level and the Marauders on the ridge ahead of you.

Send one or two of your teammates to cover the right side of the burning vehicle by directing them to cover behind the vehicle. This way, when enemies approach from that side, they'll immediately be ambushed by your squad. Meanwhile, use powers like Singularity to redirect enemies on your side, out of cover, and into your line of fire.

Continue walking down No-Man's-Land; this time, follow the new Alliance vehicle that pulls in from the right farther down the street. As it does, a Harvester lands directly in front of it. Send your squad ahead of you and position them behind the next vehicle as the Harvester opens fire on the Alliance transport unit.

Focus your and your squad's attacks on the ground forces, leaving the Harvester to the Alliance vehicle. After you diminish the enemy's numbers, turn to the Harvester and open fire. Concentrate on inflicting as much damage as you can with weapons fire, since powers and power combinations may not be as precise as well-aimed rifles. Aim your weapons at the Harvester's glowing blue node on its chest and unload on it. Without help, the Alliance tank will probably be destroyed by the Harvester. If this happens, the Harvester will leave to find better targets. However, saving the tank will provide a small XP bonus and allow it to help you in your fight against the Banshee.

After sustaining too much damage, the Harvester departs, and a Banshee joins the fight. Destroy any new ground forces that arrived with the Banshee, then turn on her. Use decoys and drones to distract, then lead her around the vehicle in the center of the area to keep her at a distance.

Blow her away little by little as you backpedal around the Alliance mobile transport. Sidestep her projectile attacks and stay far enough away from her so her radial shock-wave attack doesn't affect you. Despite your best efforts to clear the area, the vehicle is still pinned by a group of Reapers in the building ahead of you.

## REAPER STRONGHOLD

Enter the building through the door on the left and go in. Make a left inside the building and seek cover behind the small vehicle. As you reach the near left corner, several Husks come rushing out of the far right corner. Toss a grenade ahead of you and blow up as many as you can. If you don't have grenades, use Singularity or Shockwave to knock them away. Follow up with a spread of weapons fire and clear them all out.

A pair of Brutes also comes rushing out shortly after the Husks. Split them up by forcing your squad to attack one while you draw the attention of the other. Since the room is small and cramped, use the vehicles inside to your advantage.

Open fire on the Brute and wait for it to come rushing at you. When it does, execute an evasive roll behind one of the vehicles and dodge the monster. When you stand, continue attacking.

Continue evading the Brute, using the vehicles and pillars in the room to redirect the monster and attacking it as it approaches you until it falls. After dodging and dropping one, turn to help the rest of the squad take down the second.

### TIP

**Powerful Vanguard players can potentially take on both Brutes at once, using a combination of Biotic Charge, Nova, and charged melee strikes.**

Go up the ladder at the room's far end and reach the second floor. There are two turrets there being manned by Marauders.

You have the element of surprise, so launch a surprise attack with your most power-explosive abilities. Try to eliminate both Marauders, leaving only the Ravager and Cannibals to contend with. Rush inside and clear out the room to allow the Alliance transport vehicle to continue.

#### ITEM REQUISITION

There's a **Med Kit** near the room's far right side. There is another Med Kit just under the medical gurney in front of the damaged door. After picking up the Med Kits, turn around and examine the **Computer** along the back wall for some Credits.

Open the damaged door on the right side. Destroy the Husk that tries to claw you, then follow up with a few headshots on the next two Husks. Cross the short hall to the other side of the dilapidated building and drop down into a small avenue littered with concrete dividers and burned cars.

Rush up the street and take cover behind the concrete divider directly behind the large burned truck. Use long-range weapons or power combinations to explode the Marauders and other Reapers that rush out of the building down the street on the right.

Slide left behind your cover and eliminate any Reapers to the left of the truck.

Leave your squad in cover behind the truck as you circle around the car's left side and clear it out. Press your back to the truck's left side, then edge out toward the front to get a view of the inside of the building on the right.

Open fire on the enemies near the front of the building, beginning with the Ravager. Defeat the Ravager and a Brute attempts to rush out of the building ahead. Slow down the beast with disruptive powers and keep it from advancing into the street.

Unload on its head while it's slowed, and take down as much of its health as you can before it charges. When it does, roll out of the way and follow up with weapons fire as it sprints past you. If you act fast enough, you can slow down the beast while it is inside the building and keep it from reaching the street at all.

If it does manage to reach the street, use your team (or drones) as lures, while you keep your distance and pick it apart. Enter the building on the right and slide to the right side, behind several empty shelves.

Use the rows of shelves as cover, and move between them to get a better view of the building on the left. Follow the row of shelves to the room's end, then turn around and face the entrance to the building to get a jump on the Reapers.

# ITEM REQUISITION

In the very back of the room near the shop counter you will find another **Med Kit** on the back side of the tallest set of shelves.

As they attack your squad near the entrance to the building, you can obliterate the Reapers from behind. Clear the room, then order your squad to join you, and turn your firepower on the next section of the room.

Press your back to the center pillar and get a better view of the room behind you. Keep your teammates on either side of you while you occasionally pop out of cover to destroy your enemies behind you. Clear the room, then exit via the windows on the far left side.

Just as you exit the building, you find a large crater ahead of you. Don't rush into the crater; instead, slowly approach its edge and send

one squad member to the center of the crater. This will coax the enemies out of the side of the crater and they'll rush the opposite edge.

Call back your squad member, then carefully begin fighting your way toward the crater's center. Grab cover behind the fallen pillars and open fire on the enemies at the other side.

## CAUTION

If you rush to the other side too quickly, you'll be overwhelmed by enemy fire and go down nearly instantly. This crater is a death trap—don't fall into it!

Stay behind cover as long as possible and fend off all of your attackers. When you've diminished the enemy number to less than three, rush across the crater to its other side. Enter the building on the other side and go through the door.

On the other side of the door is a small enemy stronghold. There are many Cannibals and Marauders here. Stay behind the door's left side and peer into the room. Send in combat drones to weaken the Reapers or use grenades to soften them up. Slowly clear out the majority of enemies in the next room before entering and wiping them all out.

Make a right inside the next room and approach the window looking into the alley just outside. Spread your squad across the entire length of the window, and systematically destroy the Reapers in the alley. Keep your weapon trained on the Reapers emerging from the stairs ahead of you and pick them off as they pop up.

If you want to flank the opposition, you can also exit via the door on the left and enter the alley from its left end. From here, you can surprise the enemies engaging your squad in battle.

When entering the alley behind the bar, a brute comes stomping down an intersecting alley ahead of you. Combine all of your squad's firepower on the Brute and destroy it quickly. Keep your team split up so it doesn't maul all three of you at once. Pick your attacks carefully, hitting it with explosive power combos or headshots.

If you're in the alley, keep the orange barrels between you and the Brute to keep it at a distance while you pepper it with attacks until it dies.

## ITEM REQUISITION

There is a **Medical Station** inside the building. Open it up and take its contents before you go. Walking into the room

the Brutes just burst out of, check the shelves on your right to find some much needed ammo and a new **Data Pad**.

Walk up the adjacent alley. When you near its end, two Brutes will burst out of the wall on the right. Turn around and sprint back to the alley's far end, where you entered, and turn around to use the entire length of the alley to your advantage.

Open fire on the nearest brute, while also hitting it with disruptive powers to stun it or slow it down. As you do, the second Brute will be trapped behind the first. Keep the pressure on the first until it falls, then turn on the second and do the same to it. If either manages to rush you down the alley, roll away and sprint past the second Brute to the alley's opposite side.

Make a right at the alley's far end and go through the door to reach the missile battery.

## MISSILE BATTERY

The area around the missile battery is flooded with Reapers. It's an intersection with three small structures at the corners; the fourth corner, the one at the top right, is slightly harder to reach since there is only one entrance to it. Duck into the structure on the lower left corner of the intersection, an old shop with empty shelves, and hunker down. This small shop will be your safe point for the remainder of your battle with the Reapers.

### APPROACH 1: LOCK DOWN THE LOWER LEFT SHOP

Your first goal is to clear the area of Reaper forces around the missile battery. Press your back against the wall facing the street and fend off Reapers as they attack. Stay behind cover as much as possible, and use power combinations and grenades to fell multiple foes at once.

#### TIP

There is a one-use **Hydra Missile Launcher** in this shop. Do not use it right away. You'll need it for a bigger enemy very soon.

Order your crew to stalk one side of the shop while you take the other. By covering both edges of the corner facing out into the streets, you can hold your own and fend off the first wave of enemies.

Once the first wave is destroyed, approach the missile battery and activate the firewall controls to allow EDI access to the battery's targeting system.

## APPROACH 2: CORNER TO CORNER

If you don't want to keep your entire team in one area, you can shift them from corner to corner as you methodically

eliminate enemies around each storefront. Begin by taking cover in the lower left store and open fire on the enemies from the safety of your cover.

Pop out and over the ledges, and carefully cross the street in unison as you mow down any enemies on your way to the next corner shop. When you reach the next corner shop, take cover, replenish your ammo, and allow your shields to recharge before exiting and marching to the next corner. Continue patrolling the area this way until you've destroyed all enemies.

Stop at all cover spots and use cover takedowns in order to conserve ammo and eliminate enemies quickly. When the coast is clear, approach the missile battery and activate the firewall controls.

## DEFEND THE MISSILE BATTERIES

After activating the batteries, you must defend them long enough for them to fire. This time, the next wave of enemies comes marching down the center of the street on the intersection's opposite side. Duck into one of the corner buildings and begin sniping enemies from afar. If you can't snipe, wait for them to get within striking distance and begin whittling down their health with power combinations.

Leave your squad inside the lower left building while you dash outside. Go around the right side of the first missile battery. Take cover and open fire as the enemy approaches the center of the intersection. Between your close-range fire and your squad's combined powers, the second wave should not be able to reach the first missile battery at all.

## PROTECT THE LEFT FLANK

Eventually, the Alliance forces give way to the overwhelming number of Reapers, and several attack from your left flank. Order your squad to occupy both shops on the intersection's left side.

## APPROACH 1: HEAD-ON

The Reapers attack from the left side and slowly come cascading down from the ridgetop on the left intersection. Position your squad near the center of the intersection and face them right. This will give everyone a perfect view of nearly every enemy as it ambles into the intersection.

Concentrate your attacks on the Banshees when they come into play, and take them down quickly. Once they're down, turn back to the Marauders and other foes.

## APPROACH 2: CROSS FIRE

To create a cross fire down the left street, send your squad to one corner store while you cover the one on the opposite side. This way you can pin the enemies in the street as they enter. If you have a sniper rifle, you can even pick off a few foes with headshots as they stumble away from you and toward your squadmates.

When the Banshees walk into your line of fire, slow them (or time) down and hit them with as many headshots as you can. Even from the cover of a corner store, you can still get headshots with something like an assault rifle or even a pistol.

After squashing the attack from your flank, activate the missile controls to launch a missile attack at the Reaper Destroyer. The first attack misses, but that leaves the missile in the second missile battery across the street. EDI needs you to draw the Reaper closer to you and away from the transport beam. However, Reapers are about to overrun your position.

## DEFEND THE MISSILE BATTERY

The next group of Reapers is comprised solely of Brutes. Use your speed to keep them on the move and away from you. Guide your entire squad around the intersection, ducking from shop to shop as you slowly pick them apart. Use explosive powers and grenades when the Brutes are close to each other, and don't stop moving and shooting.

Deploy as many disruptive powers as you can, from drones to Nova or decoys. The more targets they have, and the more staggered they remain, the harder it'll be for the Brutes to reach you and your team.

After dispatching several Brutes, a Harvester flies down and begins to attack the missile battery. When the Harvester arrives, rush to the lower left corner shop and pick up the Hydra Missile Launcher. It has one shot, but that is all you need to defeat the Harvester instantly.

### ITEM REQUISITION

You can now grab the **Hydra Missile Launcher** from behind the counter. If you haven't picked up the **Med Kits** in the corner shops, do so now, before a large wave of enemies attack.

If you miss with the Hydra Missile Launcher, you can still defeat the Harvester by using conventional attacks. You'll

have to eliminate every Brute, then split up your squad. Order the squad to attack from the top left and top right corners while you engage the flying Reaper beast from the center of the street, just behind the first missile battery.

Keep the Harvester guessing while you keep attacking until you defeat it.

Defeating the Harvester causes the Reapers to attack with one final flurry. They send Banshees and Marauders in a concerted effort

to wipe you out. You don't have to defeat every enemy from this point on; you need only survive long enough for the second missile battery to come online.

Stay on the move, dodging the Reaper Destroyer's laser cannon blasts as you rush from one corner to another. Don't stay out in the open and don't engage the Banshees for longer than a few seconds. If

you're going to defeat any Reapers during this final wave, make it the Marauders. They're equipped with weapons and can have a greater range of fire.

Fighting from the side streets will prevent the Reaper from shooting at you. However, it will also make the run to activate the second missile truck more dangerous once they are ready to be fired.

When the missile controls come online, punch through the enemy forces and make a beeline to the controls on the second missile battery. Cutting through the top-left building can be a good way to get past the Reapers if they are occupying the middle of the intersection. Activate the missile controls to end this battle.

With the destroyer out of the way, Anderson can finally pick you up. You don't have a lot of forces left, but you've got enough to launch one more assault. The Crucible is sent toward the Citadel while the ground forces launch an all-out assault on the transport beam.

Despite the fact that Hammer has been decimated, Shepard's efforts have got the attention of the Reapers. They are breaking off from their battle with the fleets to stop Shepard. This has given Hackett the opportunity to send the Crucible to the Citadel. But it's a desperate gamble. If the ground forces can't reach the beam and get to the Citadel to open the arms, the Crucible will be a sitting duck. They know what you're going to do and are intent on stopping you.

## THE FINAL RALLY

When you're finally close enough to the transport beam, you make a mad dash straight for it. The conduit to the Citadel is still heavily guarded as more and more Reapers arrive, and a nearby Destroyer randomly targets your assault team. Even though you are in control, there is nothing left to do here but push forward.

Don't worry about the laser cannon as it fires closely to you; it won't hit you. Instead, keep your path focused directly on the beam and keep running. There are a few last Reapers in your way, but you've got your pistol in hand. A few quick shots clears the way. You'll eventually reach it but when you do, it transports you to the Citadel.

The Citadel is a bloody mess, covered in dead bodies and transformed into something else.

### TIP

**Your replies to Anderson during this conversation will gain you Paragon/Renegade points, depending on your choice of responses.**

Follow the bloody walkways up and around until you reach a final chamber of the Citadel. There, you will find Anderson...and the Illusive Man.

## DECISIONS, DECISIONS...

At this point, you'll take part in one of several endings. All endings are dependent on two major factors: the total value of all War Assets collected and the Readiness Rating percentage. There are hundreds of variables that determine what War Assets you ultimately end up with. We cannot tell you exactly how to get each one, since getting them depends on decisions made in *Mass Effect 3*, decisions made within imported saves, game time, and even online connectivity. A number of War Assets also change the scenes you witness over the course of the final battle.

Readiness Rating determines the Effective Military Strength of all War Assets. The lowest it can be is 50 percent. A good method of raising this rating is through multiplayer, and BioWare will be providing additional methods to increase readiness outside of the game. However, even at the lowest percentage possible, all endings are within reach if you do what you can to bring as many War Assets to the final battle.

Even players without access to online multiplayer are capable of getting the best endings. After beating the game once, starting a New Game Plus opens up new possibilities. A secret ending is also available to players who complete the game a second time.

In the interest of keeping this guide somewhat spoiler-free, we've eliminated screenshots for each ending. The brief description should be spoiler enough; we'll leave it up to you to experience the actual endings.

### NOTE

A chapter save is made for you at the start of the final mission. That way, you can load the save and make different choices to experience a different ending.

### CAUTION

#### Spoiler alert!

You can stop reading at this point if you don't want to have anything spoiled; otherwise, be forewarned: heavy spoilers ahead!

## SPOILER ALERT!

Turn upside down if you want to read **spoilers**

There is a special reward available only to players who have imported a save from *Mass Effect 2* with the Prejek Paddle Fish purchased by Commander Shepard. If the Prejek Paddle Fish survives through all of *Mass Effect 3* and *Mass Effect 3* New Game Plus, visit Liara's quarters aboard the Normandy for a very special intel bonus!

### TIP

If you imported a save where the collector's base was destroyed or you didn't import a *Mass Effect 2* save, then these are your possible endings:

- » If your Readiness Rating is below 1,750 points, Earth is destroyed regardless of the choice to destroy the Reapers or become one.
- » At a 1,750 Readiness Rating, if you choose to become a Reaper, Earth is destroyed.
- » At a 1,900 Readiness Rating, if you choose to destroy the Reapers, Earth is devastated but still there.
- » At a 2,350 Readiness Rating, if you choose to become a Reaper, Earth is saved.
- » At a 2,650 Readiness Rating, if you choose to destroy the Reapers, Earth is saved.
- » At a 2,800 Readiness Rating, you are able to create synergy between organics and synthetics, saving Earth and the galaxy.
- » At a 4,000 Readiness Rating, if you choose to destroy the Reapers and "saved" Anderson, Shepard lives.
- » At a 5,000 Readiness Rating, if you choose to destroy the Reapers and did not "save" Anderson, Shepard lives.

If you imported a save where the collector's base was saved, then these are your possible endings:

- » If your Readiness Rating is below 1,750 points, Earth is destroyed regardless of the choice to destroy the Reapers or become one.
- » At a 1,750 Readiness Rating, if you choose to destroy the Reapers, Earth is destroyed.
- » At a 2,050 Readiness Rating, if you choose to become a Reaper, Earth is saved.
- » At a 2,350 Readiness Rating, if you choose to destroy the Reapers, Earth is devastated but still there.
- » At a 2,650 Readiness Rating, if you choose to destroy the Reapers, Earth is saved.

## ENDINGS

If you didn't import a save from *Mass Effect 2*, then it is assumed that the collector's base was destroyed during events prior to *Mass Effect 3*.

### NOTE

If you imported a save where you made a "logical" decision and saved the collector's base in *Mass Effect 2*, then you'll see slightly different versions of the endings. If you did go with your gut, or your "heart" in *Mass Effect 2* and destroyed the collector's base, then you'll have different endings available to you as well.

## HEART VS. BRAIN

## N7 MISSIONS

N7 Missions are not quite as extensive as some of the optional story missions offered throughout the game, but they do provide additional means to strengthen your squad through experience earned for accomplishing these objectives and the variety of weapon and armor mods you can acquire during these sorties. Additionally, several Citadel side quests can only be started or completed by hitting these locations and lifting key items from them. You can also acquire improved War Assets by finishing these missions.

N7 missions can also serve as a primer for *Mass Effect 3* multiplayer, as every mission takes place in a map that is also used for the cooperative battles.

### CAUTION

Like with any mission in the game, there's no going back to these locations once you've completed the assignment, short of reloading your save or starting a new game. Be as thorough as possible when searching the environment.

## N7: CERBERUS LAB

As soon as you're given control of the Normandy following your unsuccessful attempt to rally reinforcements for Earth, Admiral Hackett sends you an e-mail regarding a hidden Cerberus facility in the Sigurd's Cradle star cluster, on the planet Sanctum. Intelligence suggests that the Illusive Man's scientists have been performing experiments with captured Reaper technology, and the Alliance wants you to throw a wrench in their plans. You need to deploy a strike team to the lab, steal the tech, and escape before Cerberus reinforcements overwhelm you.

MISSION BRIEFING

**Availability:** In "Priority: Palaven"

**Location:** Sigurd's Cradle—Sanctum

**Battlegrounds:** The Cerberus facility is small enough that close-quarters combat is inevitable. Cerberus forces can arrive from above throughout most of the lab, and the majority of the objective locations have multiple points of access. You can find yourself encircled very quickly by Assault Troopers and Centurions. Guardians can also be frustrating here, as they can suddenly appear on your flanks and block escape routes or provide cover for other hostiles. When Combat Engineers are thrown into the fray, be extremely mindful of your positioning. The tight quarters in the lab's upper and lower levels can trap you in a killbox where a deployed turret has superior position over you and your team.

Fortunately, the lab's circuitous nature can also work in your favor. If one way to the objective is heavily defended, you can leave a squadmate behind to hold the enemy's attention, preferably someone suited to tanking heavy damage, while you and the other squadmate perform your own pincer attack on the enemy.

As soon as you disturb a piece of tech defended by Cerberus, waves of reinforcements begin to arrive. It's here that you'll want to work as quickly as possible at killing the enemy. You don't want to be surrounded, and as soon as you kill a certain number of hostiles, the next objective waypoint will appear, and the process begins again.

**Consequence Overview:** There are no Paragon or Renegade decisions for this mission, but you have a chance to earn some extra Reputation upon completion. Cerberus also has been performing some Medi-Gel research at this facility; the results, while considered a failure by the terrorists, might be of use to a doctor at Huerta Memorial Hospital on the Citadel.

NOTE

This Cerberus facility reappears in the multiplayer mode as the map named **Glacier**.

Failed Medi-Gel Experiment (see Citadel: Alien Medi-Gel Formula, page 359)	Sniper Rifle Enhanced Scope

INSERTION

The landing at the facility is fairly uneventful. You start on a landing pad that is filled with various shipping containers, but the enemy has not yet reacted to your presence. Cortez pulls the shuttle away once the team is deployed and provides the first objective waypoint. There are two major routes to the Reaper Artifact. Take the ramps to the left of your starting position and enter the labs from there. You can immediately surprise Cerberus troops while having plenty of cover and room to maneuver.

Failed Medi-Gel Experiment console

Once the initial group of Cerberus operatives is dead, scour the entire facility until you've found everything listed in the Items Requisition Rundown, including the Failed Medi-Gel Experiment, as you'll not have a chance to return to this facility as Shepard. Until you actually disable the security protecting the Reaper Artifact, you'll have free run of the labs. A few of the computer terminals reveal some disturbing information about how Cerberus has adapted Reaper Indoctrination for molding their soldiers for complete obedience.

## THE FIRST ARTIFACT

Once you locate all of the credits and items, get to the control panel for the first Reaper Artifact and disable it. Collect the artifact, and run back to the landing pad to rendezvous with Cortez. Once you drop off the artifact, the pilot will mark a second artifact in the base's lower levels. This will also cause another wave of Cerberus troops to enter the base. Fight your way to the next artifact, and be prepared for stiffer resistance from Cerberus.

## THE SECOND ARTIFACT

Expect to see Combat Engineers join the Assault Troopers and Centurions you've been facing thus far on the way to the second artifact. The close quarters you're fighting in makes them priority targets, as their turrets can make brutally short work of you. As you deactivate the security for the second artifact, troops begin to drop in literally right next to you. Your squad should engage them before they finish deploying.

## COMPLICATIONS

Cerberus fighters begin to harass the shuttle, making safe extraction impossible. You'll have to hold off waves of Cerberus troops while Cortez tries to lose his pursuers. A good strategy is to find a location where cover is available for the whole squad, and try to limit the number of flanking routes the enemy can use to get to you. Guardians will join the enemy reinforcements. Prepare to flank them with your squadmates, or snipe them through the view slots of their shields. If Liara is in your team, Stasis is invaluable for lining up headshots.

## EXTRACTION

Eventually, Cortez radios in to the team, explaining that he has an opening to pick you up, but he needs you on the landing pad to fight off Cerberus troops. By the time you get there, Cerberus will likely be there in force. Try to approach from the upper floor labs, and use the height difference to your favor, funneling enemy troops up the ramps toward you.

Combat Engineers will set up turrets on the landing pad, so make sure the pad is free of those before committing you or any squadmates down to the pad. If you're a bit more aggressive, use the boxes on the pad for cover and be vigilant for any flanking attempts. Once you've killed several Cerberus troops, the shuttle will arrive. Interact with it to complete the mission.

# N7: CERBERUS ATTACK

Cerberus has a vested interest in stopping your attempt to get krogan support for the turians on Palaven. They’ve taken control of a massive, defunct ground-to-space cannon array on the krogan homeworld of Tuchanka and have found a way to make it operational again. Cerberus is now using the cannons to clear a path for an inbound ship to bomb the krogan resistance. Taking back the cannons and shooting down the Cerberus vessel would keep the resistance in the fight, while also throwing a wrench in Cerberus’s plans.

## MISSION BRIEFING

**Availability:** In “Tuchanka: Turian Platoon” **Location:** Krogan DMZ—Tuchanka

**Battlegrounds:** One of the largest locations for an N7 mission, the center of the facility is a relatively open space, dotted with cover. Passing over it is a set of pipes that Cerberus troops like to retreat to if given the chance; the Nemesis snipers in particular abuse this unreachable vantage point on careless Shepards. This central yard is typically not the safest route to any other location in the facility, but it can be the fastest.

Surrounding the central area are a series of smaller, tighter rooms and passages. The team starts off near a

blasted out bunker, which leads to a side passage connected to the lower areas. On the opposite side of the base is the cannon control room, which is what you must secure. It’s at a higher elevation from the rest of the map, has easily controllable choke points, and has a good view of the entire central courtyard.

On lower difficulties, it might be easy to just plow through the massive exterior space to reach your next destination, but it is definitely safer to take advantage of the side passages between the

bunker and control room, if only to deny snipers the use of the pipe-sniping position.

Check out the control room thoroughly. There are some turret schematics located in this mission that might be useful to a woman outside of Purgatory.

### NOTE

This map is the same as the Giant multiplayer map.

**Consequence Overview:** There are no Paragon or Renegade decisions for this mission, but you do gain some Reputation and a nice chunk of credits. Don’t miss the Old Grid Schematics, as you will not get another chance at completing that Citadel mission!

## SECURING THE CONTROL ROOM

Shepard sets the tone for this op right away with a simple phrase: “Kill anything that gets in our way.” The first marked objective is to eliminate any hostiles within the control room and give the massive super-guns something better to shoot at than friendly forces. Cerberus does not start off fully aware of your presence, so use this as a chance to get a free kill or two to start the battle.

Once you attack or are spotted, Cerberus moves to repel you immediately. Expect a mix of Assault Troopers, Guardians, Centurions, and Combat Engineers. Remember, you can take the side passages into the control room, or you can brave the exterior area and push directly through the bulk of their resistance. However you manage it, once the control room is clear, Shepard suggests using the superguns on Cerberus vessel before it's in bombing range. Check near the targeting displays for the guns for an Old Grid Schematic, used for a side quest on the Citadel.

Take advantage of the lack of Cerberus interference at this time and explore the map for items and Medi-Gel. Once you attempt to use the guns, they will return in force.

Old Grid Schematic location

## RESTORE POWER

Predictably, Cerberus is one step ahead, having sabotaged power conduits for the cannons. These conduits are located inside the blasted out bunker Cortez dropped you off by. To get the cannons back up and firing, you need to undo whatever it is they've done, which means a trip across the base back to the new objective. Cerberus throws Nemesis snipers into the mix at this point, dropping them off atop the piping over the central exterior. Don't let them get comfortable up there. Resistance near the objective can be fairly intense.

Once you've dealt with the forces near and inside the bunker, shoot out the locks on the power conduits and activate them.

## RETAKE THE CONTROL ROOM

With power restored, you must once more dislodge Cerberus from the control room. It's actually a good idea to rush the squad over there as quickly as possible, as it is likely Combat Engineers will be attempting to set up turrets inside the control room. Denying them this will make life much easier.

Once you've resecured the control room, activate the cannons and watch the fireworks. You can see it displayed on the holographic HUD in front of the controls, or if you're fast, you can get outside and watch the ensuing explosion in the sky. Mission accomplished!

# N7: CERBERUS ABDUCTIONS

The colony world Benning is in the direct path of the Reaper invasion, yet Cerberus is laying siege to the populace here. At the same time, Cerberus publicly denies they are attacking or abducting any of the civilian populace. Admiral Hackett believes there’s more going on than meets the eye, and so the Normandy is being sent in to investigate and to help evac the civilians.

## MISSION BRIEFING

**Availability:** In “Attican Traverse: Krogan Team”

**Location:** Arcturus Stream—Euler System—Benning

**Battlegrounds:** Benning is in bad shape when you arrive, and getting worse. Much of the alleys and open streets throughout this map are exposed to fire from elevated positions that only Cerberus can get to; therefore, you must get inside any of the buildings and prepare for close-quarters fighting.

This N7 mission pits you against large groups of Cerberus troops in confined areas. There are a lot of choke points and natural funnels that can be used by you and against you. Many of the habitations require jump-jets to reach, so only Cerberus can get there; therefore, keep one eye pointed up high for snipers.

You’ll be escorting civilians for part of this mission, so you will want people who can deal with threats quickly. Giving Garrus a powerful sniper rifle and teaming up with him using a rifle of your own can quickly put down any one soldier on the field. EDI and James are also excellent candidates, as their abilities combo well off of one another.

### NOTE

This map is the same as the Ghost multiplayer map.

**Consequence Overview:** There are no Paragon or Renegade decisions for this mission. On the way to the first objective, look for dog tags lying on the ground; a certain Citadel ambassador has been looking for evidence of his son’s survival or demise on Benning. Unfortunately, this is all that remains.

## SECURE THE UPPER STREETS

As soon as you arrive at the landing pad, Cortez has bad news for you. Civilians are currently engaged with Cerberus troops in the area and are being overrun. You need to get over to them and provide cover. Failing that, you must at least give Cerberus something else to shoot at. Watch out for turrets laid down by Combat Engineers.

Dog Tag

In the area you’re first directed to, look for this Dog Tag located near a pillar in the outdoors section of the upper streets. It’s incredibly easy to miss.

## ESCORT THE CIVILIANS

Once you eliminate the initial Cerberus team, you get word of more civilians on the map's other side being pinned down by more hostiles. In your rush to protect the civilians, watch your fire as you engage the enemy. Clear out any nearby enemies, then speak with one of the civilians.

After a wave has been cleared, the civilians will advance to the next "safe spot." Unfortunately, this means they will travel through the lower street, giving Cerberus all manner of sniping positions on them and consequently on any of the squad who are close by defending them.

As soon as you talk with the civilians, more Cerberus troops begin to rush into the area. You can make a stand right near your precious cargo, or you can spread your squad out, taking advantage of the nearby elevated building and its clean firing angles at the street below. Either way, at least one squad member should keep close to them for protection, as many Cerberus troops tend to gather in the building leading to the landing pad.

One stop that the civilians make puts them right next to a ladder Cerberus uses to flank them. Use your squad to keep Cerberus occupied on one front, climb the ladder yourself, and clear out the structure. From there, you can get a good position on the enemy gathering near the landing pad.

Eventually, you will prove too much for Cerberus to handle, and the civilians will reach the landing pad with no further harassment. Cortez will swoop in to pick up the team, and the mission is all but over. But don't be so quick to leave! Make sure you've found everything that can be collected on the map, particularly those Dog Tags and the Capacitor Helmet!

## N7: CERBERUS FIGHTER BASE

Noveria is a world familiar to Shepard, who came here during the hunt for Saren Arterius. Now the new Normandy is being sent to this world to neutralize a key Cerberus installation. The fighters stationed here are wreaking havoc on the Alliance. Admiral Hackett wants to seize the base, but the air defenses are too much for a head-on assault. You need to neutralize those first.

### MISSION BRIEFING

**Availability:** After "Priority: Tuchanka"

**Location:** Horsehead Nebula—Pax System—Noveria

**Battlegrounds:** In spite of the scale of the facility, your battle here takes place in a very small area. The walkways of exterior section are wide enough to allow for traffic but are also long enough that running down them between pieces of cover leaves you vulnerable to incoming fire for longer than you might like.

The base's interior is separated into an upper and lower level. The upper level is cramped, connected directly to the landing pad via a series of catwalks. It's a defensible location with lots of cover, making a push through the area a challenge if Cerberus has an established presence. The lower level interior is an L-shaped area where one of the primary objectives of the mission is located. It's a bit more open but still has plenty of usable cover for both sides to use.

You'll want to be cautious regarding who you bring to the mission. At one point, you'll be asked to choose a squad member to disable a security protocol, leaving you down a man for the ensuing firefight. Make sure you bring a character and weapons that are effective against Cerberus troops.

#### NOTE

This map is the same as the White multiplayer map.

**Consequence Overview:** There are no conversational decisions made here. However, you earn a War Asset after clearing this assignment.

### CLEAR THE AREA

You start the operation near a landing pad with a fighter parked for maintenance on it. The area is crawling with Cerberus, so you'll need to eliminate them. The fighter on the pad actually makes for good cover from threats on the walkway and the unreachable ledges. If you've got a sniper rifle or scoped weapon, this is a chance to do some distanced wet work. More aggressive players can use the crates on the walkways for cover as they advance into the base's upper level.

The enemy may try holding up in the lower level interior. If this is the case, watch out for turrets laid down by Combat Engineers. You'll be informed once the facility is cleared. Once that's done, scour the base for credits and supplies before moving onto the next step.

Among the supplies you find at this facility, look at this control panel on the wall directly across from the objective. The Heating Unit Schematics found here are incredibly easy to miss. There's a salarian in the Citadel's Presidium Commons who could use this.

## DISABLING THE DEFENSES

Once you've found everything on the facility, get to the designated control panel and choose wisely who you assign to cracking the security. They will not be available for the ensuing firefight. Eventually, your chosen hacker will inform you that you need to activate a security panel simultaneously with them. Once this is done, the defenses are down, but Cerberus doesn't quite give up. A large deployment of enemy troops arrives at the landing pad, and that is your next destination.

## CLEANING UP

Watch out for Nemesis snipers on this phase of the battle. They are fast enough to get behind you and your squad, so make sure that once you find one, you don't lose track of them until they are dead.

Once you've silenced the enemy, you have one final challenge. An Atlas drops onto the landing pad. Fortunately, you've got plenty of good cover to use on the pad itself and on the walkways near the pad, making it relatively easy to stay at range and bring it down with heavy ordnance or powers. Destroying it will complete the mission, so be certain you've found everything you need on the base before taking it down!

## N7: FUEL REACTOR

With the reactor on Cyone compromised, fuel is not getting to ships desperately in need in this sector. Admiral Hackett already sent in a team led by Captain Riley to get it restarted, but they are going to need an assist. This is where you come in. You need to restart the reactor and figure out what exactly shut it down in the first place.

### MISSION BRIEFING

**Availability:** Available after "Priority: Perseus Veil"

**Location:** Silean Nebula—Kypladon System—Cyone

**Battlegrounds:** Of all the N7 missions thus far, this is the most complex and possibly the most dangerous. The reactor facility is a mazelike series of walkways that are connected via ladders and ramps; not every section of the facility is connected, so you may have to take a winding route to reach some areas.

As there isn't a lot of room to maneuver, weapons that take advantage of that are a big help. Any area-of-effect powers can help flush out hostiles, but it also can mean you will pin yourself down in a bad spot. With aggressive hostiles, this can prove fatal. Be attentive to your surroundings, and know where you can fall back to on a moment's notice.

#### NOTE

This map is the same as the Reactor multiplayer map.

**Consequence Overview:** There is a chance for Paragon or Renegade points here. You can either send a squadmate to support the other team or leave them hanging on their own.

Make a thorough sweep of the area to avoid missing out on the Medical Treatment Plan that a doctor at Huerta Memorial Hospital could use to save a patient.

#### ITEMS REQUISITION RUNDOWN

### RECON

As soon as you arrive in the Reactor, you're greeted by Nyrek, a turian member of the advance team. Everything's all quiet. Take the time to do some preliminary recon on the surroundings, picking up a Rosenkov Materials Chestplate and a Medical Treatment Plan.

Be careful where you go for now. The ramps leading to the reactor housing are filled with radioactive clouds that ignore your shields and sap your health quickly. Talk to Captain Riley when you're ready.

## GOING DEEPER

Captain Riley's team will need to split up from yours to activate the other reactor in the facility. One of her men will move a crate to allow you access deeper into the facility.

Look for a control panel that handles moving the heavy crates that block your path. The controls are simple enough. The center button picks up or puts down a crate. The left and right switches move the crane. You need to move two containers to the right to proceed.

Once past the containers, Riley calls in that she can see the fuel rod controls, but radiation is blocking access. You need to vent the radiation away before you can safely access the controls. The vent controls are very close to where the containers once blocked your path, but take this time to explore the other parts of the facility that are not irradiated.

After you vent the radiation, the path to the fuel rod controls is safe. Explore the formerly irradiated areas, then activate the controls.

## REAPER AMBUSH

The moment you unlock the fuel rods, Cortez informs you that other movement has been detected in the facility. You're beset by Marauders and Husks. Barrier engines activate on the walls, granting your enemies extra protection. Take those out as soon as you see them!

## RESTARTING

After clearing out the hostiles, the reactors fail to restart. You need to seal the moderator tanks before a restart is possible, and this means going deeper into the facility. There are two tanks to seal.

With the tanks sealed, the restart controls become active. Make sure you've located everything you need, and get ready for a fight.

Marauders and Husks drop in from above, and a series of barrier engines activate near the reactor controls. Take them out quickly, then turn your attention to the Husks. The sooner they die, the sooner you can concentrate on the Marauders.

Once you deal with this wave, Captain Riley calls in. Her situation is desperate. You can offer her support for Paragon points, or you can tell her to soldier on and gain Renegade points. If you do send support, the next fight can get a little tricky, so pick who you send off wisely.

## THE CORE

Whatever you choose to do, the reactor core opens, revealing another ambush led by a Brute enjoying the benefits of a barrier engine mounted inside the core. Try to take out the engine before the Brute comes charging out after you, then deal with the Marauders inside.

Once you've dealt with this final ambush, Cortez radios that he can't raise the other team, regardless of what you choose to do. Finalize the reactor restart, then head to the pickup point. If you sent support, you'll find that Captain Riley and Nyrek made it out okay, though they're a little worse for wear.

### NOTE

Not having sent a henchmen to help Captain Riley will result in her death and Nyrek will be the only survivor of her squad.

## N7: COMMUNICATION HUB

In retaliation for recent losses, and perhaps hoping to regain the edge on the Alliance forces, Cerberus has attacked a major communication relay facility on the planet Ontarom. Admiral Hackett needs Shepard on-site to secure the facility before Cerberus lifts valuable intel from the network. There's a catch: They are already in the system, and the only thing holding them back is a lone civilian operator who is in hiding—Grace Sato.

### MISSION BRIEFING

**Availability:** Available after "Priority: Horizon"

**Location:** Kepler Verge—Newton System—Ontarom

**Battlegrounds:** While not as involved as the Fuel Reactor, the Comm Hub is a large and very wide-open map that rewards excellent sniping for both sides. The central pipeworks clearing is surrounded by a series of walkways and overlooked by the main communications building, which is the tallest point on the map but has only limited visibility on the pipeworks directly below.

The interior of the building is not complex, but it does limit your mobility somewhat. Worse yet, even though it provides ample views on the areas surrounding it, that also means that anyone on the outside can spot you. A Nemesis can easily put you or a squadmate down from across the whole map if you're lacking in attention or reflexes.

This mission will have you running to different computer stations to disable hacking attempts, and usually the enemy is going to be there in force before you. If Tali is an available squadmate, bring her for her Sabotage power. It is especially effective on Combat Engineers, as it turns their turrets against them!

**Consequence Overview:** There is a chance for Paragon and Renegade points on this mission. The fearful tech supporting you on this mission is barely able to give you the info you need. Your choice of words will determine how she gets through the situation.

Don't miss the Cerberus Codes on one of the computers outside the facility, near the large antennae.

#### NOTE

This map is the same as the Dagger multiplayer map.

#### ITEMS REQUISITION RUNDOWN

Cerberus Codes (See "Citadel: Cerberus Ciphers", page 365)	Medi-Gel (x4)

### INITIAL CONTACT

As soon as you drop into the facility, Cerberus goes on the attack. Grace Sato puts up a nav point for you to follow to disable the hacking attempt. Clear out the enemy first, as once you've killed all the Cerberus troops in the area, you get free rein of the facility to search for all the hidden items, as well as the Cerberus Codes for a side quest!

The codes can be easy to miss. For reference, it's near the second Cerberus Hacking Device you disable.

## SECOND DEVICE

As soon as the first hacking device is disabled, Sato calls in, very worried that she's about to be found out. Despite this, she puts up the location of the second hacking device. At the same time, Cerberus reinforcements swarm into the facility. Fight your way over to it, clear the area, and disable it. Nemesis snipers are numerous here, so be careful.

It's important to eliminate resistance before attempting each disable, as the enemy has the uncanny ability to interrupt you just before you finish the disable. Better to be safe than sorry.

## FINAL DEVICE

Once the second device is history, Shepard calls Sato for the location for the last device but is met with fearful replies that she may be captured or killed if she keeps updating your team. How you respond to her will grant you Paragon or Renegade points.

With the final device marked on your screen, get ready to fight your way over to the central structure. The last device is located inside the building, in the circular central room. You've got no real protection from attack from all sides, so bring your squad with you to keep the enemy busy while you go for the last device. Phantoms can make an appearance here, so you definitely want someone watching your back, lest they kill you in a single stroke of their sword. With the last device disabled, your mission is complete.

## SIDE MISSIONS

There are special missions that become available as the Reaper War grinds toward its climax. They do not advance the plot the way the Priority missions do, but these operations are still important to the war effort. War Assets are often secured or improved through these missions, and side plots, sometimes involving characters returning from previous games in the series, help flesh out the story. The catch here is that these missions are very time sensitive. Once you receive the assignments, you have limited time in-game to complete them. If you deploy on too many missions, these side jobs will no longer be available, costing you valuable resources.

### GRISSOM ACADEMY: INVESTIGATION

Grissom Academy is a special school for the best and the brightest of the Systems Alliance, specifically in the area of Biotics development. Specialist Traynor picks up a distress call from the academy, as it lays directly in the path of the Reaper onslaught. A turian cruiser apparently has responded to the call, but Traynor reveals that this is not the case. As you will find out, Cerberus is laying siege to the school. Joker is forced to run a distraction with the Normandy while your team slips aboard to rescue the students.

## MISSION BRIEFING

**Availability:** After "Priority: Palaven"

**Battlegrounds:** Large classrooms and wide hallways give both your squad and Cerberus many choices for each encounter. Even though there is a distinct path to follow, be aware of the various side routes and dead ends that you can explore. There are three specific encounters throughout this mission that will test your ability to deal with and coordinate assaults from multiple approaches.

If you're doing this mission as soon as you receive it, this will be your first encounter with the Cerberus Atlas mech. These monsters are slow but tough to kill, and they bring extremely heavy firepower to each battle. Supported by other troops, an Atlas can prove to be a big headache. Fortunately, each encounter with an Atlas occurs in areas with plenty of cover, giving you a chance to flank the machine and take it down in relative safety.

Don't miss any of the weapons located throughout this mission! The M-96 Mattock in particular is arguably one of the best assault rifles in the game.

**Consequence Overview:** You have the chance to speak to the students of the academy throughout the mission and give them orders that will determine their effectiveness in battle and their safety. Be aware that your words can send these kids into the meat grinder, or you can give them safer roles to play out for the war effort.

### PERVIOUSLY IN MASS EFFECT

Returning players from *Mass Effect 2* will be surprised to see Jack at the academy if she survived the final battle, helping defend the students. While she doesn't return to the squad as a full-time member, Shepard can catch up with her again at Purgatory once this mission is complete.

## INITIAL CONTACT

As soon as you arrive, Kahlee Sanders, an officer of the academy and the one who sent out the distress call, is about to be overrun by Cerberus troops. After eliminating the threat, you have a chance to speak with her regarding the situation at Grissom. Your responses can earn you Paragon or Renegade points. She mentions knowing Admiral Anderson, and if you inquire about that, she will give you a message to pass on to him. Leave Sanders to her work, and follow her directions to reach the students pinned down by Cerberus in Orion Hall.

### ITEM REQUISITION

After you leave Sanders, enter the next corridor. You can't do anything for the student being dragged away by Cerberus troops.

Move into the next hall. You're able to vault over the dividing wall to collect an **Assault Rifle Stability Damper** lying on the steps. From there, you see two doors you can use to enter the next room, where a student is being threatened by a pair of Cerberus soldiers.

Eliminate them and speak with the student. His sister is missing somewhere in the academy, and you need to find her. As you enter the room, check the corridor on the room's far right to find a datapad worth 1,250 credits.

# ITEM REQUISITION

After rescuing the first student, vault over the wall into the classroom next door. Check the desks for an **SMG Heat Sink**. After

this, move through the next hallway that is blocked off by rubble and enter another classroom.

Cerberus troops gun down another student, then enter the room to check the body. You face a mix of Assault Troopers and Centurions here. Once you're clear, enter the left side door to explore the hall that was blocked off by rubble.

# ITEM REQUISITION

An **M-22 Eviscerator** shotgun lies on a couch. Consider equipping this weapon immediately. Despite carrying only three shots per thermal clip, it's a powerful weapon to find so early in the game. In the room through the classroom's

right exit, you can find the **M-96 Mattock** assault rifle on another couch. Between these two weapons, you effectively cover all ranges of combat. Close to the rifle is the **Mnemonic Visor** armor piece, as well as the sister of the first student you rescued. Talk to her and she will eventually get to safety.

Look for the locker near this student for another 1,250 credits. Once you've cleared the area of these items, move on to Orion Hall.

## STUDENTS IN PERIL

As soon as you enter Orion Hall, you see several students threatened by the enemy. They deal with the initial threat, but a Cerberus Atlas joins the battle. The ensuing firefight will pit you against it and a mixed force of ground troops. Eliminate the Atlas first, focusing your entire squad on the machine. Once it's no longer a threat, concentrate on the Cerberus soldiers until the students are out of danger. Note that a Students' Barrier meter will appear at the top of your HUD. Should it be drained completely by hostile attacks, your mission fails.

Ensign Prangley and Ensign Rodriguez are the two students in charge of the group. A conversation will ensue, allowing you to gain Paragon or Renegade points based on your responses.

While the students take a badly needed break, you need to grant Kahlee Sanders camera access to the whole station, as

Cerberus has it locked down. Look for the Cerberus camera control near the door where the Atlas pushed through. A **Med Kit** is on the room's opposite side if you need the supplies. Once the camera controls are back with Sanders, go to the room where the students are to find another item and the door overrides. A datapad in the room also contains 1,875 credits.

## NOTE

If she survived the suicide mission at the end of *Mass Effect 2*, Jack is leading the student resistance here. You can talk to her to learn more about the students. If she's dead, her leadership role will be filled by Ensign Prangley.

### ITEM REQUISITION

Look for an **Assault Rifle Precision Scope** near the door override.

## BRAWL

As soon as you enter this room, you will notice an Atlas in the distance, already facing you. What you may not see are the Centurions, Assault Troopers, and Combat Engineers in the area just ahead of the cover in front of you; they are all supported by a series of shield generators that constantly provide additional protection to the enemy. It is tempting to rush straight ahead to that cover to make your stand, but the enemy will encircle you and you'll take fire from the Atlas.

Your best bet is to immediately take the ramp to your right as soon as you enter the atrium. This will block the Atlas from getting a line of sight on you, while giving you the height advantage on the enemy. Maintain control of this perch, and watch for Cerberus troops entering from a locked door at the top of the ramp. Fortunately, the students will be supporting you from on high with their Biotics; however, don't count on them to win the battle for you.

After several waves of reinforcements, Cerberus stops sending in grunts, allowing you to destroy the Atlas at your leisure. Scour the area of ammo if you need it, then proceed through the unlocked door to a small corridor leading to the next half of this battle. A **Med Kit** awaits you inside if you need the supplies, and there's a computer offering 3,750 credits.

The next phase starts off with you at a distinct positional disadvantage. This other half of the atrium is similar to the first, but now you start off on the lower levels, and Cerberus controls the ramp to higher ground. Combat Engineers also drop into the lower level as you enter and may already have sentry turrets up and running. Try to interrupt them if you can, and make them your priority targets every time they appear.

It might seem like a good idea to try holding the ramps during this phase, but this can actually be very risky, as Cerberus reinforcements drop in across the ramps and throughout the lower level. This can leave your back exposed to attacks, and you may miss Engineers setting up turrets. In the grassy area, find cover that faces the ramps for you and your squad, and engage the enemy as they drop in. Meanwhile, the students will continue throwing Biotic blasts to support you.

After many tense waves of reinforcements, Cerberus falls back, and the atrium is yours.

## THE HOMESTRETCH

Leave the atrium via another corridor, and you'll enter a larger passage. To your left, Cerberus troops are attempting to break through a barrier erected by students. To the right is a computer that grants you 4,375 credits. Snag those before rushing the inattentive Cerberus guards and put them out of their misery. The students are less than trusting of you, claiming that the Cerberus troops had tried to deceive them with false hopes of rescue, and they are not going to be fooled now. You're given Paragon and Renegade options for how to deal with them.

### PREVIOUSLY IN MASS EFFECT

If players saved David Archer in the *Mass Effect 2* "Project Overlord" DLC, he will be present here to unlock a room with another three items.

### ITEM REQUISITION

After dealing with the frightened students, move down the next open corridor, and check the computers.

**Biotic Amp Schematics** that you will need for a side quest at the Citadel are located here, and you will not have another

chance to retrieve them. In the room beyond, leap over the small barricade, and check the seats to your left to locate the **Serrice Council Chestplate**.

Past the room with the chestplate, you find a Combat Engineer with his back turned to you and an empty Atlas mech next to him. Kill him before he gets the chance to jump in, and take the mech for yourself. Stomp up the stairs into the next room for the final battle at Grissom Academy.

## PAYBACK

The Atlas mech is well armored and well armed. Your melee attack will flatten any soldier who gets close, your missiles have powerful area-of-effect blasts, and the main gun is accurate and can send the enemy flying across the room. You will likely rely mostly on the gun, as it can be used while on the move. Slaughter the enemy troops as quickly as possible; if they get close enough to the students, they will start taking shots at their barrier. Don't let that meter fall to zero.

Eventually, Cerberus will send their own Atlas up the stairs you entered from to confront you. If you have retained your own mech up to this point, you can kill the hostile quickly by focusing rapid cannon shots directly onto its canopy. With the Atlas defeated, the students make a break for the shuttles and freedom, and you should join them.

#### ITEM REQUISITION

Before you leave the academy for good, head toward the stairs the enemy Atlas came from, and inspect the seats to the right of it for an **SMG Magazine Upgrade**.

As you flee the academy, Cerberus gives chase, resulting in the death of Ensign Prangley. As the shuttles fly back to the Normandy, you're given another set of conversation options that will determine where the students will end up after Grissom Academy. You can send them to the front lines for Renegade points, or you can find them a safer defensive role for Paragon points.

#### NOTE

Prangley's sacrifice can be averted if Jack is alive and well.

## TUCHANKA: BOMB

In the aftermath of rescuing Primarch Victus's son and his platoon from a hairy situation on Tuchanka, the team moves on to attempt defusing the Cerberus bomb on the planet. It is revealed that this bomb is no Cerberus creation, but rather it is turian by design. A relic of the Krogan Rebellions from centuries before, the bomb was intended as a safeguard against another rebellion. If it goes off, the already shaky prospects of bringing the krogan into the war effort will suffer a major setback, damaging Earth's chances of survival.

## MISSION BRIEFING

**Availability:** After "Tuchanka: Turian Platoon"

**Battlegrounds:** After an explosive landing, expect traditional rough Tuchankan terrain leading up to the actual bomb. Cerberus is putting up resistance, but they also seem to be in a hurry to leave. Don't get too careless in your pursuit, as their Combat Engineers will be setting sentry turrets to further stall your progress.

The major setpiece of the battle is at the actual bomb site. Lieutenant Victus will be attempting to defuse the device, leaving your squad to hold down a very small piece of real estate while Cerberus sends a small army after him. Because of how quickly Victus can be hurt and killed, bring a squad that can kill human opponents as quickly as possible.

**Consequence Overview:** There are some conversations that can earn you alignment points during the mission. The most important thing to remember is that by doing this mission, your krogan War Assets will not suffer any penalties later in the game, because the bomb will have been defused.

## HOT LANDING

Under the cover of an artillery barrage, your team is inserted into a courtyard filled with low cover. Cerberus troops advance quickly on your position to suppress you. Don't let the explosions from the artillery scare you, as you can storm through them without serious harm. The blasts do make it difficult to determine enemy positions, so take the time to scan the area before making another advance; you could be missing hostiles at your flank.

Once you eliminate all Cerberus, the artillery fire will cease. Gather up ammo as needed, then advance up the ramp at the courtyard's far end.

### ITEM REQUISITION

The **M-29 Incisor Sniper Rifle** can be found on the left side of this ramp, leaning against the wall. Watch for a **Shotgun Blade Attachment** as you reach the top of the ramp.

To the right of the weapon mod is another corridor, split into two distinct paths. Cerberus will try to set up overlapping fields of fire from cover strewn throughout. The right passage typically starts with a Combat Engineer with a turret at the far end. Despite their distance, make them priority targets for your squad while you thin out the resistance much closer to you. Remember that you can take out the deployable defense shields Cerberus is using for cover by disabling the generators.

Securing the right side gives a strong flanking opportunity on the left side passage, as the enemy cannot safely dislodge you from your safe spot. Take out the shield generator to deny incoming reinforcements the extra protection in grants. If you're particularly aggressive, you could charge straight in and make a stand at the generator yourself, taking advantage of the rapid shield regeneration.

#### ITEM REQUISITION

Watch for a set of **Rosenkov Materials Gauntlets** in the right half corridor of this section. As you advance to the next section, look for an abandoned console you can salvage for 5,000 credits. As you climb up the broken floors,

don't miss the **SMG Heat Sink** just before the next shoot-out.

### PRESSING ON

After you find the SMG mod, another group of Cerberus troops stands in your path, off to the left. As you take them down, you overhear a Cerberus officer order his men to delay you as long as possible while the bulk of the force retreats.

#### ITEM REQUISITION

Past the first set of grunts on this upper level, you can collect a **Med Kit** and a **Pistol Scope**. Grab these before continuing your pursuit of Cerberus.

You can catch a team of Cerberus attempting to evacuate in a shuttle as you drop to a lower level. Pick them off, then move

toward the Shield Pylon that was giving them protection. A datapad nearby grants you another 5,000 credits, and an ammo crate helps restore any thermal clips or grenades you might be missing.

The Cerberus retreat continues. Some of them fall back in the distance and head toward a waiting shuttle, while others continue to fight a delaying action against you. It's relatively safe to ignore the retreating hostiles, but if you're trying to gun down everything in your path, don't ignore the troops closest to you. There's enough cover for them to use to flank you.

Once they are down, advance forward, just as a Cerberus shuttle clears the area with any survivors you may have left. You can get your first look at the bomb here. Take the ladder to your right to keep moving forward.

# ITEM REQUISITION

After you climb the ladder, you can find a **Sniper Rifle Concentration Module** atop a set of crates. Just around the corner, a **Pistol Melee Stunner** is hidden behind another crate.

After the pistol mod, follow the path leading down to another corridor where Cerberus troops are hastily abandoning their posts. Don't get too eager to rush forward: A Combat Engineer has dropped a turret to catch reckless players off guard. After dealing with this threat, collect the Med Kit and a set of **Turret Control Schematics** that you'll use for a side quest available on the Citadel later in the game. (see "Citadel: Cerberus Automated Turret Schematics," page 364)

## DEFUSING THE SITUATION

You've finally reached the bomb site, and Lieutenant Victus is attempting to disarm the weapon. His guards are taken down by sniper fire, and your squad of three is the only thing standing between Cerberus and him. It's time for a last stand.

The courtyard you fight in has three distinct drop zones that Cerberus shuttles will try to use to deploy troops to overwhelm you. If you have grenades or any other area-of-effect powers, now is the time to use them. Try to catch the enemy just as the shuttle doors open with a grenade, or set up power combos with your squadmates. The weaker they are upon landing to fight means the quicker your team can clean them up. Victus is extremely vulnerable while defusing the bomb, and it only takes a few seconds of sustained enemy fire to kill him.

Keep constantly scanning for stragglers who may have slipped past your kill zones, and pay attention to Victus's health bar. If it starts to fall, quickly seek out his assailants and prioritize them over everything else; if Victus dies, the mission fails.

Eventually, an Atlas joins the fray, and this marks the last push by Cerberus. Your squad must keep the mech occupied at all costs, as it will attempt to snipe at Victus with its cannon, causing grievous damage to him. The Atlas will receive more ground troop reinforcements, but until it's dead, try to keep the pressure on it alone. Once you destroy it, kill off the remaining soldiers, and Victus will be safe.

Unfortunately, the bomb defusing does not go as planned, and the young turian must make a tough decision to ensure the device is incapable of detonating.

Following the successful but costly mission, Primarch Victus and Urdnot Wreav have a confrontation in the Normandy's War Room. You're able to choose how to settle it, gaining Paragon or Renegade points in the process. Regardless of your choices, Primarch Victus admits that he has just learned the harshest lesson a father could regarding war and sacrifice.

## LESUSS: ARDAT-YAKSHI MONASTERY

With the Reapers now encroaching into asari space, their fleets are fully engaged in battles to protect their homeworld, leaving many colonies undefended in the face of the onslaught. A distress signal from a colony in the Nimbus Cluster has asari high command concerned, but they are unable or unwilling to tell you what their commandos were doing on that world or what you can expect when you arrive. It eventually comes to light that the colony is a haven for asari Ardat-Yakshi and that the Reapers have a very specific interest in these genetic aberrations.

### MISSION BRIEFING

**Availability:** During "Priority: Perseus Veil"

**Battlegrounds:** Your visit to this colony begins peacefully, but you are still filled with a certain amount of dread. Parts of the monastery are without power, making exploration difficult, even with flashlights on. Eventually, the Reapers will ambush your squad. The monastery is filled with Husks, Cannibals, and Marauders.

If this mission is taken on as soon as it becomes available, you will have your first encounter with arguably the most dangerous Reaper unit in the game: the Banshee. You must race to kill this threat before it gets close to you or anyone in your squad.

#### NOTE

Liara is not a required squadmate for this mission, but her unique perspective on the Ardat-Yakshi can make her an informative companion.

**Consequence Overview:** Ardat-Yakshi are extremely dangerous asari who grow stronger whenever they mate...usually at the cost of their lover's life. There's a good reason why the asari high command wanted to keep this place a secret, and why they want to ensure none of the women here leave alive. How you handle this delicate situation will weigh upon the total war effort and on your moral alignment.

#### NOTE

Shepards imported from *Mass Effect 2* have the chance to meet up with the asari justicar Samara during this mission, assuming she survived the climactic battle against the Collectors. Her appearance at this monastery changes many events throughout the mission, and reveals more about a pair of Ardat-Yakshi found within.

#### ITEMS REQUISITION RUNDOWN

Assault Rifle Precision Scope	Med Kit
Assault Rifle Stability Damper	PDA
Credits: 7,500; 5,000	Pistol Melee Stunner
Disciple Shotgun	Service Council Shoulder
Gallae's Electronic Signature	Guards
Medical Station (x3)	Sniper Rifle Spare Ammo

The shuttle ride to the monastery is fairly uneventful, though it is possible to earn alignment points during the conversation along the way. You arrive at the entrance to the monastery and are greeted by peaceful silence.

#### NOTE

Players who imported a save with Samara still alive will find a second shuttle at the landing zone. It can be inspected for additional dialogue.

#### ITEM REQUISITION

Check the entrance area thoroughly for an **Assault Rifle Stability Damper**.

With the LZ clear of activity, the squad has to move indoors. The elevator is out, requiring you to use the emergency ladders to get deeper into the facility. Eventually, you reach a dining hall, with screams echoing throughout the area, but there is no movement other than your own. It's dark, and the squad is forced to use their flashlights.

#### ITEM REQUISITION

The dining hall is dark, but there are no hostiles to contend with, making your item search simple. As soon as you enter this room, make a left and begin a circuit of the room. A **Pistol Melee Stunner** is located in an abandoned bedroom near Gallae's

**Electronic Signature**. In a room to the right of the elevator shaft, you find a **Sniper Rifle Spare Ammo** mod, along with a wall safe with 7,500 credits. Be sure to inspect any datapads or terminals you come across for additional information about the monastery.

After clearing out the dining area of items, take note of the asari commando's corpse near an exit leading to a lit area. The PDA

next to her marks the ultimate destination of the commando team, as well as their objective: the destruction of the monastery, using a bomb planted in the great hall. You get a dialogue option here, and then the team moves on, now with a goal in mind.

The enemy continues to remain elusive as you press through a lit corridor and bypass a security door. After breaking through the lock, check to the right side of the catwalk to locate another asari commando's body. Her PDA contains a last message to her lover somewhere on the Citadel. This begins the "Citadel: Asari Widow" side quest (see page 364).

#### NOTE

Samara will make her first appearance at the temple here, conversing with Shepard after the security door is breached.

The exit to this area leads to a wide courtyard and to your first hostile contact of the mission.

## SCREAMING DEATH

The first Banshee you encounter simply teleports in with little warning beyond her bloodcurdling shrieks. Banshees are a grave threat. They fling Biotic blasts that tear through your shields and prevent any form of regeneration, except when you use Medi-Gel. Their ability to warp in rapid succession toward a target makes keeping them away difficult, and you want to stay beyond their reach at all times. They can kill Shepard or disable a squadmate in a single, brutal melee grab!

When you defeat the Banshee, Cannibals begin crawling into the courtyard. Watch out for attempted flanking maneuvers as you engage them. Remember you can kill one Cannibal to use as bait to draw a large group toward the new corpse.

After you finish off the Cannibals, continue into another section of the monastery. You come across an asari named Falere, who is on the run from another Cannibal, but your team is able to save her. She reveals herself to be Ardat-Yakshi; she wants to survive the Reaper assault and save her sister Rila, currently in the hands of the enemy. Your responses to her can earn you Paragon or Renegade points. When it's revealed a bomb has been planted in the great hall, Falere dashes off to save Rila. You're forced to give chase on foot.

### NOTE

If Samara is at the monastery, she will be present for this conversation as well, leading to an interesting reveal.

Before entering the door to the next combat, there is a computer to the left of the door that you can examine for experience. Continue through another passage, and you come across a squad of Reaper troops led by a Marauder. Engaging them opens another room to your right that is full of Cannibals enhanced by a barrier engine. Try to disable the engine first.

### ITEM REQUISITION

In the room where the Cannibals and barrier engine were, you find an asari **Disciple** shotgun and **Service Council** **Shoulder Guards**. Consider equipping the Disciple right away. It may not be as lethal as other weapons

of its class, but it is light, allowing for a more flexible loadout. It also has a chance of causing most humanoid threats to stagger with each shot, making it great as a support weapon. A Medical Station is nearby to help refill your Medi-Gel reserves. On the opposite side of this upper floor, a room with a wall safe contains 5,000 credits. There's also a weapon bench in case you want to switch out weapons and mods, and there are two computers that you can examine for info.

Taking the stairs down to the lower levels summons another Banshee and another group of Cannibals. As always, make the Banshee a top priority, as their teleportation ability can allow them to quickly flank your squad. Don't be afraid to fall back up the stairs if necessary.

With the Banshee out of the picture, you can easily deal with the Cannibals. Clear the room and then bypass the door lock.

#### ITEM REQUISITION

In the room after the second Banshee encounter, look for an **Assault Rifle Precision Scope** on the left side. Afterward,

inspect the asari corpse in the center of the room for more information; then move through the last door, taking an elevator that leads to the great hall.

## THE GREAT HALL

As you enter the great hall, check for Medical Stations on the first sets of pillars. There's also a Med Kit in the center of the room. Stock up if necessary. Things are about to get hot.

Falere has found Rila, but the latter does not seem to be herself, attacking her sister. After Falere repels her, the scream of Banshees fills the room.

Two Banshees, supported by Husks, charge at your squad. This can arguably be one of the hardest fights of the game, as the Banshees can close the distance rapidly and kill you in a single moment if you're careless. Focus on burning them down, but do not discount the threat of the Husks, lest they pin you down long enough for a Banshee to get close to you.

After surviving the Banshee onslaught, Rila comes to her senses and urges you to flee with Falere. Your team pulls a distraught Falere away from her sister to the elevator as more Banshees pour into the room. The surviving Ardat-Yakshi does not take the death of her sister well, and through conversation, you can calm her down. You're also given the option to execute her to finish what the commandos started, or you can show a measure of mercy.

#### NOTE

The final battle at the Great Hall, as well as the aftermath, all change dramatically if Samara is present. She will attempt to kill herself in the wake of Rila's sacrifice. You can stop this with a Paragon interrupt. Doing this will also disallow the option of executing Falere.

Whatever your choices, your obligation to asari high command is complete. The monastery has been purged.

# ARRAE: EX-CERBERUS SCIENTISTS

Commander Shepard is not the only ex-Cerberus employee angered by the organization's turn to brutality. Shepard's old squadmate with Cerberus, Jacob Taylor, has helped a cadre of like-minded scientists led by Dr. Brynn Cole break free of the organization and go into hiding on the planet Gellix. They have offered Alliance command their services in exchange for their safety. Unfortunately for these scientists, Cerberus is on to them and has sent forces to intercept them before you arrive.

### NOTE

Jacob Taylor may be a familiar face to players who finished *Mass Effect 2*. He will be your key contact throughout this mission, assuming he survived the suicide mission against the Collectors. He is alive by default for players starting with *Mass Effect 3*.

## MISSION BRIEFING

**Availability:** During "Priority: Perseus Veil"

**Battlegrounds:** The base on Gellix has enough firepower to keep Cerberus at bay but is falling, perhaps because it is being defended by civilians. The Illusive Man is playing for keeps here, intent on not letting a single scientist escape his grasp. Be certain to explore the two noncombat areas thoroughly, as there are supplies and even an important quest item that you can pick up while you're here.

Your primary task is to get the rooftop AA guns online. Naturally, Cerberus is there in force to prevent that. The battlefields here heavily encourage sniping, so consider scoped weapons for your loadout. If you've managed to bring Ashley Williams back into the squad, she and Garrus make excellent choices for this mission, as both can wield a sniper rifle with deadly accuracy. Give them the most powerful sniper rifles at your disposal, and between the two of them, very little in the distance will stay safe for long.

**Consequence Overview:** Saving these scientists is a huge intelligence coup against the Illusive Man. Better yet, if you trust them enough, you can offer them a place on the teams building the Crucible, giving the project and your Galaxy at War efforts a needed shot in the arm.

### NOTE

Jacob Taylor may be a familiar face to players who finished *Mass Effect 2*. He will be your key contact throughout this mission, assuming he survived the suicide mission against the Collectors. However, he will not be available here if he did not survive the suicide mission against the Collectors.

### ITEMS REQUISITION RUNDOWN

Credits: 1,250; 2,500 (x3); 3,750	Shotgun Spare Ammo Mod
Kassa Fabrication Greaves	SMG High-Caliber Barrel
M-6 Carnifex Pistol	Sniper Rifle Piercing Mod

Med Kit (x3)	

## BREAKING THE SIEGE

On the flight in, Lieutenant Cortez informs your squad that Cerberus is not only at the facility, but also that heavy reinforcements are expected to arrive within minutes. The situation on the ground is growing desperate for the scientists, and for Jacob Taylor.

The firefight at the facility's gates is made more complex by the fact that the Cerberus troops have a pair of shield pylons providing additional protection to them. Take them out of the picture, then go to work on the troops. Alternatively, you can charge straight into the pylon's area of effect and use them to stand your ground while going toe-to-toe with Cerberus.

After beating back the attack, speak with Jacob to get the front gate open, where you meet with Dr. Brynn Cole. She informs you that her group split from Cerberus when it became obvious that they were being killed off after their usefulness to the organization had dried up. Explosions begin to rock the facility, and Jacob informs you that the anti-aircraft guns on the roof are disabled and need to be back online if the evacuation is to proceed.

## GATHERING

In the first area of the base, talk to the various scientists to gain additional Reputation points and information about what is going on. After climbing the stairs, check the nearby tables for a datapad worth 2,500 credits.

### NOTE

**Dr. Archer** is another familiar face to *Mass Effect 2* players who played through the DLC mission "Project Overlord." It seems he may have turned over a new leaf.

### ITEM REQUISITION

Past the first locked door, you find a weapon bench and an **Assault Rifle Magazine Upgrade**. Climb the stairs to find

a Medical Station beyond the next door, then explore this upper area.

As you talk with Dr. Cole and Jacob, it becomes clear that you'll need to get to the roof to personally fix the guns. Before you leave, speak with both Dr. Cole and Jacob in the infirmary for extra information.

If players with a female Shepard romanced Jacob Taylor, you'll find that things did not end up working out between the two. He's moved on, with none other than Dr. Cole herself.

### ITEM REQUISITION

Before you travel to the rooftop, there are some items you can retrieve in this area. Next to one of the consoles near Dr. Cole is a datapad worth 2,500 credits.

In the infirmary with Jacob, there's another Medical Station if you need the Medi-Gel, and a datapad worth 1,250 credits.

**Kassa Fabrication Greaves** can be found on a crate near the infirmary entrance. **Turian Toxin Data** can be found in the larger section of the lab to help complete a Citadel quest (see page 365).

### A Shotgun

**High-Caliber Barrel** is located near the exit leading to the rooftop. Once you climb the ladder to the next section, don't miss the **M-6 Carnifex** pistol.

## THE ROOFTOP

Your first set of enemies is already set up with a shield pylon, but they have their back turned to you. Take out the pylon and the nearby Combat Engineer first, then lay into the rest.

### ITEM REQUISITION

Don't miss the **SMG High-Caliber Barrel** once you cut through the first set of hostiles on the roof.

Your first real objective on the roof is to restore the satellite links to the base, and there's a Cerberus team waiting for you. Watch out for the Combat Engineer to try and sneak a turret into place atop the stairs. After you eliminate this team, move to the satellite uplink and begin the repair. A Med Kit and a datapad worth 2,500 credits are also close by.

The uplink is restored, but now you must climb farther up the rooftop to reach the AA guns to manually restore their functionality. Cerberus begins dropping in more troops; one lands directly next to a shield pylon. Try to hit them hard before they exit the shuttles.

As you climb higher, an Assault Trooper takes up a mounted gun on an elevated section of the roof. The fire may not seem accurate at first, but do not tempt fate. Once he draws a bead on you, the gun can shred your whole team in seconds. Another Med Kit is located on the final section of the roof before you climb up the gun towers.

### ITEM REQUISITION

Don't miss the **Sniper Rifle Piercing Mod** behind a row of crates at the back of the rooftop, near the ladders leading up to the AA guns.

## ACTIVATING THE AA DEFENSES

Climb up the undamaged ladder to the first AA gun and activate it. Cross the walkway connecting the two towers and head toward the second gun to restore it; then prepare for another fight.

# ITEM REQUISITION

Before you leave this second tower, check out the small room you can access only from that rooftop to find a **Shotgun Spare**

**Ammo** mod. Near the second gun, you find another Med Kit and a datapad worth 3,750 credits.

The second gun is seriously damaged, and one member of your squad will need to stay back to repair it while Cerberus sends in the cavalry to stop you. Fortunately, you now have access to the same mounted gun that was used on you minutes before, and you will want to put it to work. Cerberus Phantoms are among the units deployed here, and their instant-kill sword technique is not something you want to deal with.

After several waves, the gun is repaired, and you need to go back and reactivate it. Once you do this, the mission automatically takes you back to the lab.

## BREAKOUT

Once back in the lab, make a final sweep to ensure you've missed nothing, then activate the console pointed out by Dr. Cole to begin the evacuation. Cheers of elation from the scientists become cries of fear as Cerberus Assault Troops break through the glass of the base and begin a direct assault on the lab.

Once the lab is clear, get downstairs and help the scientists take out any Cerberus troops in the launch bay for the escape shuttles. The bay doors will open, allowing your squad back outside to deal with the gathering Cerberus forces.

Expect very heavy resistance, with shuttles dropping off reinforcements directly in front of you and atop the two towers flanking the bridge that leads to the landing pad. Try to use the shield pylons the enemy set up, but if you're unable to safely push forward, it's best to simply destroy them and deny them access to those bonuses. Watch for Phantoms trying to stealth their way up close to your position while you are preoccupied with other threats.

Capping off this massive assault is an Atlas, but you're still not completely out of the woods yet. Rush toward the landing pad, but watch your left flank! Occasionally, a Combat Engineer will try to ambush you with a turret that covers the entire run to the evac point.

Once you eliminate all hostile forces, the mission is complete. Your squad narrowly escapes an army of Cerberus troops, with some help from Jacob and Dr. Cole. If there were any doubts regarding the value Cerberus had for these scientists before, there shouldn't be any now.

# HUB MISSIONS

Throughout the Reaper War, you have the opportunity to help others in need with simple side missions that you take on by overhearing certain conversations. Many of these lead to improvements to existing War Assets or may even result in you receiving new ones. Others are about providing closure to those who are seeking word regarding loved ones. Almost every mission provides a boost to your overall Reputation, with some providing Paragon or Renegade points.

Many of these side missions are very profitable. Rare artifacts retrieved for people seeking them provide 15,000 credits for each item turned in, save for one mission that provides 20,000 credits. This totals out to 185,000 credits earned without even firing a shot!

These missions become available at certain points in the story, but many of them may not be completed until later in the game, as more star systems open up for exploration. As there are so many of these side assignments, it can be easy to forget about them, especially during the course of Priority missions or the larger side missions. Use this chapter to learn each location you must explore to complete all hub missions. These are organized in the order in which you receive each of these missions.

## SHRIKE ABYSSAL: PROTHEAN OBELISK

**Availability:** Act 1, available as of "Priority: Palaven"  
**Location:** Citadel Embassies

You overhear a volus ambassador talking about a Prothean obelisk that he wants to provide to the Alliance for work on the Crucible, saying it is currently located in the Shrike Abyssal. Travel to that cluster, enter the Urla Rast system, and scan the planet Talis Fia to locate the artifact. Inform the ambassador that you located the obelisk during your next visit to the Citadel. This artifact nets you 20000 credits.

## CITADEL: ALIEN MEDI-GEL FORMULA

**Availability:** Act 1, during "N7: Cerberus Lab"  
**Location:** Cerberus Lab and Huerta Memorial Hospital

Your first N7 mission in Sigurd's Cradle sends the team to a Cerberus lab. During your exploration of the small facility, look for a Failed Medi-Gel Experiment and collect it. The purpose may not be immediately clear, but return to the Citadel and look for Dr. Ravin at Huerta Memorial Hospital. She could use these findings.

### TIP

If you miss this item during the mission, you can obtain it from the Spectre terminal in the Citadel Embassies for a small fee.

## APIEN CREST: BANNER OF THE FIRST REGIMENT

**Availability:** Act 1, available as of "Priority: Sur'Kesh"  
**Location:** The Citadel, Purgatory

Visiting Purgatory, look for a group of turians gathered in one corner of the club. One will lament the loss of the banner of the First Regiment and will indicate that you can find it in the Apien Crest cluster, in the Castellus system. Travel there in the Normandy and scan planet Digeris to locate the banner; then report back to the turians. This artifact is worth 15000 credits

## ARIA: BLOOD PACK

**Availability:** Act 1, available as of "Priority: Sur'Kesh"  
**Location:** The Citadel, Purgatory

See Aria T'Loak in Purgatory after she sends an invitation. Her business proposal is to unite three merc groups under one banner: hers. Meet with Narl in the Presidium Commons apartments. The batarian wants Shepard to pretend he's been captured to gain the Blood Pack leader's trust. Your response to this can give you Paragon or Renegade points. Once the Blood Pack shows up, a sudden change of leadership leaves Aria with a willing and pliable leader to manipulate the mercs into fighting for her, and you.

## ARIA: BLUE SUNS

**Availability:** Act 1, available as of "Priority: Sur'Kesh"  
**Location:** The Citadel, Purgatory

The Blue Suns will require a bit more work to coerce. See Darner Vosque near Cargo Hold A in the Docks: Holding Area. According to him, a turian general by the name of Oraka is meddling with his pirate raids and will not throw in his support until he's dealt with. Your responses earn you reputation points. Aria suggests she can handle the situation discreetly if Shepard can't. Go see Oraka in the Presidium Commons.

Oraka is not willing to give up on harassing the Blue Suns, as they are attacking Citadel weapon shipments. You're given a choice to call in the hit on him for Renegade points, or find the means for securing weapons through a black market arms dealer.

Within the Commons, a salarian clerk near Aeghor Munitions named Kannik is your weapons dealer. His "good" merchandise isn't open to credits, but rare artifacts are acceptable. Travel to the Kite's Nest cluster, and go to the planet Vana of the Vular system. Scan the world for the artifacts, then report back to Kannik. Kannik will offer his goods to Oraka. Go back to Oraka with the good news, and he will lay off the Blue Suns, gaining Aria another army.

## ARIA: ECLIPSE

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** The Citadel, Purgatory

Commander Bailey of C-Sec has been fighting the release of Eclipse leader Jona Sedaris, and Aria wants you to convince him to allow it.

Meet with him in the Citadel Embassies, and the ensuing conversation can earn you Paragon or Renegade points. He will direct you to the C-Sec office in the Presidium Commons to give you a chance to speak with her.

Sedaris threatens extreme retribution on all of Eclipse's enemies and tries to badger you into allowing her release. You can invoke Spectre authority over Bailey and allow for her release, or you can find another solution. During your chat with Sedaris, she mentions her lackey, Seyn, being too weak-willed to betray her and take the organization for himself.

Find the salarian in the Docks: Holding Area, near where you met Darner Vosque. Present him with the idea of taking Eclipse for himself, either by letting her rot in jail or killing her after release. After brief consideration, he decides that following Aria would be a step up from Jona Sedaris. With this, all three major merc organizations of the galaxy are Aria's to command and become a powerful War Asset for the cause.

## BENNING: EVIDENCE

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** The Citadel Embassies

Ambassador Dominic Osoba is seeking information on the whereabouts of his son, an Alliance soldier who did not return from his mission to the planet Benning. Other soldiers who knew him refuse to give a straight answer.

During the N7 Cerberus Abduction mission that appears later in the game, you are sent to Benning to deal with the Cerberus presence there. Check carefully in the area you are first directed to; you will find the Dog Tags belonging to your ambassador's son, but little else. Bring back the sad news as soon as possible.

#### NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

### CITADEL: BARLA VON

**Availability:** Act 1, available as of "Priority: Sur'Kesh"  
**Location:** Presidium Commons

Find Liara near the cafe in the Commons. After a short conversation, she will direct you to a volus named Barla Von over at the bank. He knows of a mercenary outfit stranded in enemy territory, offering their services and monetary reward for rescuing them. Once you have access to the Krogan DMZ, travel there and enter the Dranek system. Scan the planet Rothla to recover the mercs. Return to Von to finish the mission.

### CITADEL: BIOTIC AMP INTERFACES

**Availability:** Act 1, available as of "Priority: Sur'Kesh"  
**Location:** Huerta Memorial Hospital

An asari at Huerta Memorial is trying to contact Grissom Academy for information on biotic amps but is unable to get through. Specialist Traynor aboard the Normandy will eventually pass along information that necessitates a visit to the academy.

After the fighting that ensues and you're exiting the facility, keep an eye open for a computer console with Biotic Amp Schematics. Report back to the asari. Make sure to report back to her before completing the Genophage Campaign, as she leaves afterward, making it impossible to complete the mission.

#### NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

### CITADEL: HANAR DIPLOMATS

**Availability:** Act 1, available as of "Priority: Sur'Kesh"  
**Location:** Citadel Embassies

Jondum Bau, a salarian Spectre, e-mails Shepard regarding a potential issue on the Citadel regarding hanar diplomats, one of whom may be indoctrinated by the Reapers. Meet with him near Commander Bailey's office for a full update on the situation. He asks that you go to the Spectre Requisitions office to use your authority to locate any information on the hanar from terminals on the Citadel.

The first terminal is located within the Embassy proper.

The second terminal is located in the entrance to the Docks: Holding Area, and the third is located farther back in the area, near Bay E28. You are prompted to go back to the second terminal; from there, you gain the last bit of intel you need. Return to Jondum Bau in the Embassies to confront the hanar.

In the ensuing confrontation, your conversation choices can grant you Paragon or Renegade points. The hanar admits their true allegiance to the Reapers and claims to have uploaded a virus to his homeworld's defensive network. Jondum tries to stop the upload but is waylaid by a bodyguard. Shepard will automatically run to a computer to stop the virus, while the bodyguard mortally wounds Jondum. However, a Renegade interrupt will allow you to go back and save Jondum...at the cost of millions of lives on the hanar homeworld. Saving Jondum grants you a Spectre team War Asset; saving the homeworld provides you a combined force of hanar and drell as a War Asset.

Shepards from *Mass Effect 2* who recruited the super-thief Kasumi **and** completed her Loyalty mission are able to get both War Assets, as Kasumi makes a return here if she survived the final mission. She stops the upload while you save the Spectre.

## CITADEL: HEATING UNITS

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** Presidium Commons

A salarian near the C-Sec office in the Presidium Commons worriedly discusses with a family on a colony that a clutch of eggs may not be receiving proper warmth, but apparently the hardware needed is not available on the open market. Locate heating units on the N7 Noveria missions in the lower base area, directly across from the security console that you need to deactivate.

### NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee. After you purchase it, inform the salarian.

## CITADEL: IMPROVED POWER GRID

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** Purgatory

A human woman in front of Purgatory mentions her concerns about the failing power grid that helps keep the club in operation. She says there's not a solution on the market to handle the increased power draw of the facility.

The solution for this is on Tuchanka, of all places, found during the N7 Cerberus attack mission. Don't miss the Old Grid Schematics

in the control room for the ground-to-space artillery cannons. After you locate the schematics, report back to the woman in front of the club. Return before completing the Genophage campaign, as she will leave afterward.

## NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

### IRUNE: BOOK OF PLENIX

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** Presidium Commons

A volus near the Presidium Commons wants to find the Book of Plenix to remind his people to be charitable during this time of crisis. You may not have access to planet Iruine immediately, but as soon as the Aethon Cluster opens up for exploration, travel there and scan Iruine in the Aru system to locate the book. Retrieving this artifact is worth another 15,000 credits.

### ISMAR FRONTIER: PROTOTYPE COMPONENTS

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** Huerta Memorial Hospital

A salarian doctor in the hospital room across from where your injured comrade is staying seeks a prototype to help his people to fight better against the Reaper onslaught, but the needed components are in the Ismar Frontier. As soon as the system is available, travel there and scan the planet Metaponto for the components. Be sure to get the components to the doctor as quickly as possible. After the mission to cure the genophage on Tuchanka, he will not be in the hospital, preventing you from completing the quest.

### KITE'S NEST: PILLARS OF STRENGTH

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** Docks—Holding Area

A batarian prophet wants to give his people the strength to pull through the loss of their homeworld to the Reaper

invasion, but he needs the Pillars of Strength to provide that inspiration. Travel to the Kite's Nest cluster, the Harsa system. The planet Khar'Shan hides the pillars; just scan the world for them. Your generosity to the prophet is rewarded with 15000 credits.

### CITADEL: GX12 THERMAL PIPE

**Availability:** Act 1, available as of "Priority: Sur'Kesh"

**Location:** Normandy—Engineering Deck

Engineer Adams may have raised concerns about the possibility of the Normandy's drive core venting into the engineering compartment in the event of an overloaded heat dissipation system. He will eventually request parts from the Citadel to help prevent this. You can buy the part directly from a shop on the Citadel, or you can actually requisition it from the shuttle bay on the Normandy. It will take time for Adams to finish the installation, so check back with him to wrap up the quest.

### CITADEL: KROGAN DYING MESSAGE

**Availability:** Act 1, started during "Attican Traverse: The Rachni"

**Location:** Presidium Commons

While investigating a missing krogan squad during "Attican Travers: The Rachni," you may find a corpse of a krogan warrior who has left a final message to an asari named Ereba. You can find her working at a shop in the Presidium Commons. It's worth sticking around to listen to the krogan's final words to her.

## CITADEL: CERBERUS AUTOMATED TURRET SCHEMATICS

**Availability:** Act 1, started during "Tuchanka: Bomb"

**Location:** Presidium Commons

During a side mission to Tuchanka in support of turians attempting to defuse a massive bomb, Cerberus abandons a set of Turret Control Schematics. After Shepard and C-Sec repel the Cerberus coup attempt on the Citadel, several turrets left behind by the terrorists have C-Sec in fits trying to prevent them from activating and gunning down civilians who happen upon them. To help solve that issue, hand an officer at the Presidium Commons the schematics you've found.

### NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

## ATHENA NEBULA: HESPERIA-PERIOD STATUE

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Presidium Commons

An asari in the Commons wants a statue from a particular period to assist with developing the Crucible. She can be found near the elevator entrance. The statue itself can be found on the planet Polissa, in the Vernio system of the Athena Nebula. You'll receive 15000 credits for your trouble.

## CITADEL: ASARI WIDOW

**Availability:** Act 2, found during "Lesuss: Ardat-Yakshi Monastery"

**Location:** Presidium Commons

During the side mission to the Ardat-Yakshi monastery, you will come across a dead asari commando. Inspecting her PDA will play

her final message to her lover on the Citadel. You can find the widow of this commando at the Presidium Commons on the Citadel, to the north-east of Apollo's Cafe, to give her the bad news.

## CITADEL: BATARIAN CODES

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Presidium Commons

Officer Noles, near the C-Sec office in the Commons, is tracking down a hacker using old batarian access codes from when that race had an embassy on the Citadel. Head to the Spectre facility at the Embassies, and enable tracking of batarian access codes.

You find the first compromised console inside Huerta Memorial Hospital.

The second is located near the Normandy dock entrance, close to where you met Diana Allers.

The last console is located in the Docks: Holding area next to Bay E28. As soon as you access it, a batarian appears behind Shepard, a gun in hand. This operative is apparently the highest-ranking military official of the entire Batarian Hegemony, and he places the fall of his empire

and the loss of so many batarian lives on the shoulders of the Spectre. Depending on your conversational choices, you can either talk the man down and earn the support of the remaining batarian forces as War Assets, or you can kill him. However, to be able to convince him successfully, you will need a high enough Paragon or Renegade score; otherwise you will be forced to kill him.

#### PREVIOUSLY IN MASS EFFECT

If you completed *Mass Effect 1*'s DLC "Bring Down the Sky," you will know the batarian in question: Balak. He holds Shepard personally responsible and says that you should have killed him during the events of the DLC.

If you killed or arrested Balak during "Bring Down the Sky," the effects of the batarian hacking attempts are much weaker and don't affect human lives as much. The culprit is a broken and beaten batarian who was just trying to help his people—without Balak there, the batarians aren't nearly as dangerous, and Noles is already arresting him when you find him. You have similar options if Balak is present—convince the batarians to join you, or let him be arrested.

### CITADEL: CERBERUS CIPHERS

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Citadel Embassies

In the wake of the Cerberus coup attempt, a turian C-Sec officer can be found near Donnel Udina's office, saying that he needs

Cerberus ciphers to defeat their encryption in the future should they strike again. You will not have a chance to actually get the needed ciphers until the N7 Communication Hub mission later in the game. During that op, check for a console marked with Cerberus Codes, and return them quickly to the C-Sec officer.

#### NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

### CITADEL: CERBERUS RETRIBUTION

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Presidium Commons

Near the C-Sec station in the Commons, you overhear a couple discussing the fate of a traitorous C-Sec officer who betrayed his comrades to Cerberus during the coup; apparently, they set up a hit on the man. Go to the C-Sec station and confront the assassin, a former Alliance captain. You can attempt to talk him out of his assassination, but Shepards with high enough Paragon or Renegade scores can either pull rank on the man to get him to back off, or they can use their Spectre authority to let the hit happen "legally."

### CITADEL: CERBERUS TURIAN POISON

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Huerta Memorial Hospital

According to a salarian doctor, a turian general is dying due to a special poison tailored to his species by Cerberus. You can locate Turian Toxin Data during the "Arrae: Ex-Cerberus Scientists" side mission. Check the small hub area you arrive in after the initial landing combat. It's near the med-bay where Jacob Taylor can be found (assuming he survived the events of *Mass Effect 2*).

## NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

## CITADEL: CHEMICAL TREATMENT

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Huerta Memorial Hospital

Doctors at Huerta Memorial are unable to come up with a treatment to a chemical poisoning that will eventually kill all affected patients. What you're looking for can only be found during the "N7: Fuel Reactor" mission. The Chemical Treatment Plan is located on a PDA close to where the mission begins atop a shipping crate, so don't miss it.

## NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

## CITADEL: INSPIRATIONAL STORIES

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Docks: Holding Area

A salarian filmmaker is being denied access to the makeshift refugee camps on the docks, citing that C-Sec believes

he will only prove disruptive. If you offer to help, all you need to do is to explore the entire dock area, interacting with photo opportunities until the filmmaker is satisfied with what you've got; then report back to him to wrap up this mission. Only photo opportunities dealing with refugees count toward completing this mission.

## CITADEL: KAKLIOSAUR FOSSIL

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Presidium Commons

According to a salarian geneticist at the Presidium apartments, krogan used to ride tamed kakkiosaurs into battle on toxic worlds, but the animals no longer exist. However, with a preserved fossil, it may be possible to clone them en masse to support krogan forces today. Head to the Argus Rho cluster, and explore the Phoenix system. The planet Intai'sei happens to have the fossil he needs. The kakkiosaur fossil is worth 15000 credits.

## CITADEL: MEDI-GEL SABOTAGE

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Docks: Holding Area

The Medi-Gel dispensers around the refugee camp have been tampered with in the wake of the Cerberus coup attempt, and patients may die if this is not resolved. After hearing out the request of the doctor, simply explore the entirety of the docks, interacting with dispensers as you find them, until you're prompted to return to the doctor. Though the problem is fixed, the saboteur remains at large...

## PREVIOUSLY IN MASS EFFECT

Series vets with imported characters may be amused at the return of Conrad Verner, the self-professed greatest fan of Commander Shepard—that is, assuming he survived this long. Conrad will find the saboteur for you but will be shot and killed...unless Shepard also completed “Citadel: Rita’s Sister” in *Mass Effect 1*, in which case Conrad survives and improves your Galactic Readiness rating. Also, Conrad offers to give you data that could help with construction of the Crucible. The assistance is minimal, but if you completed “Feros: Data Recovery,” “UNC: Asari Writings” in *ME1* and obtained an Elkoss Combine license, Conrad gives you a much larger reward.

## CITADEL: MEDICAL SUPPLIES

**Availability:** Act 2, available as of “Priority: Perseus Veil”

**Location:** Normandy Med Bay

Your chosen doctor aboard the Normandy will eventually inform you that you have an abundance of supplies that could be exchanged for things the ship needs. You’re directed to speak with a turian named Tactus, who is considered the leader of the refugees in the makeshift camp on the docks. He will try to haggle with the commander, and you have the chance to earn Paragon or Renegade points based on your decisions. You must use the special charm/persuade option to successfully convince Tactus, or you will not receive his aid.

Your reward on this mission changes based on which doctor you convinced to board the Normandy. Doctor Chakwas gives the player improved Medi-Gel, while Dr. Michel improves your Medi-Gel capacity.

## CITADEL: REAPER CODE FRAGMENTS

**Availability:** Act 2, available as of “Priority: Perseus Veil”

**Location:** Citadel Embassies

An asari commando in the Citadel Embassies needs a Reaper code fragment to help her fleets predict where the enemy will strike next. Your only chance at a piece of nonmalignant code comes during the “Rannoch: Geth Fighter Squadrons” mission. While exploring the geth server, keep an eye out for a string of Reaper code that is separated from other fragments.

## NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

## CITADEL: TARGET JAMMING TECHNOLOGY

**Availability:** Act 2, available as of “Priority: Perseus Veil”

**Location:** Presidium Commons

A turian C-Sec officer near the cafe in the Commons wants to improve the Citadel’s ability to interfere with hostile targeting systems in the event of another attack. During the “Rannoch: Admiral Koris” mission, inspect the various computer terminals located

throughout the geth jamming tower facility to find Jamming Tower Data. Take it back to the turian.

## NOTE

If you miss this item during the mission, you can obtain it from the Spectre terminal for a small fee.

## CITADEL: VOLUS AMBASSADOR

**Availability:** Act 2, available as of “Priority: Perseus Veil”

**Location:** Presidium Commons

Primarch Victus sends you a disturbing e-mail in the aftermath of the Cerberus coup attempt. A turian cruiser was ambushed by the terrorists, and the evidence points to volus ambassador Din Korlack. Go to the Spectre offices and use the terminal there to begin the investigation into Korlack.

Go to the embassy guard standing along the wall to the elevator’s left. After speaking with him, you’ll be granted access to Korlack’s office. After listening to the third entry on his terminal, search for the bug in his room.

Once you have the bug, you can start narrowing down the location of the volus. You're automatically transported to the Presidium Commons. Head to the apartments and search the doors until you enter the room where the volus is being kept.

Afterward, Din Korlack explains his Cerberus connections and the reason he's got a bounty on his head. He tries

to make a deal with you: You can keep a colony safe from attack, or you can take his offered bomber squadron as an asset. There's no way to grab both. Your choice also grants you a measure of Paragon or Renegade points.

#### PREVIOUSLY IN MASS EFFECT

If players importing a Shepard from *Mass Effect 2* hired Zaeed Massani for the battle against the Collectors and completed his loyalty mission to ensure his survival, the infamous mercenary makes an appearance for this side quest. He might be able to twist an arm or two in your favor. If Zaeed survives the mission (which he will, if loyal from *Mass Effect 2*), you can recruit him to assist in the war effort in the Refugee Camp.

#### CITADEL: WOUNDED BATARIAN

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Presidium Commons

A human and a turian near the apartments in the Commons can be overheard discussing a batarian who was wounded in the Cerberus coup and who is now receiving aid for his injuries. However, it is possible he's a terrorist. Once you get his

turian nurse to let you see him, the batarian all but confirms what the civilians were saying. You're given a choice: shut off his life-support or call his nurse back to him.

#### DEKUUNA: CODE OF THE ANCIENTS

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Purgatory

An elcor in front of Purgatory wants to retrieve the Code of the Ancients, left behind on its homeworld of Dekuuna. Once you're able to explore the Silean Nebula, travel to the Phontes system within the cluster. Scan Dekuuna for the artifact, and report your findings back to the elcor. You're rewarded 15000 credits in compensation.

#### HADES NEXUS: OBELISK OF KARZA

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Presidium Commons

A human researcher sitting near the cafe in the Commons wants an artifact from the Hades Nexus cluster. You might not have access to this cluster right away, but as soon as you do, the planet Kopis in the Hoplos system hides the obelisk. You pocket another 15000 credit reward for the obelisk.

#### HADES NEXUS: PROTHERAN SPHERE

**Availability:** Act 2, available as of "Priority: Perseus Veil"

**Location:** Docks: Holding Area

A colonist near Bay E28 claims there is a Prothean sphere on the planet Gei Hion in the Hades Nexus, and he wants to sell this information to the Alliance. The planet can be found in the Sheol system. You receive 15000 credits after you inform the colonist that you've located the sphere.

## NIMBUS CLUSTER: LIBRARY OF ASHA

**Availability:** Act 2, available as of "Priority: Perseus Veil"  
**Location:** Purgatory

You can find a frustrated asari commando complaining that while the galaxy is caving in all around them, her people are in this club, just dancing. She feels that the Library of Asha, found in the Nimbus Cluster, will help produce more fighters than dancers. Scan the planet Carcosa in the Agaious system. The library is worth another 15000 credit reward.

## SILEAN NEBULA: RINGS OF ALUNE

**Availability:** Act 2, available as of "Priority: Perseus Veil"  
**Location:** Huerta Memorial Hospital

You can find this asari right next to the hospital entrance. She feels the Rings of Alune will inspire her people to provide greater assistance to hospitals like the one she's standing in. Take the Normandy to the Silean Nebula, Teyolia system, and scan the planet Nevos. Bring the rings back to the asari nets you 15000 credits.

## VALHALLAN THRESHOLD: PROTHEAN DATA DRIVES

**Availability:** Act 2, available as of "Priority: Perseus Veil"  
**Location:** Docking Bay D-24

You overhear an Alliance Marine discussing sensitive information over an unsecured communicator regarding Prothean data drives. Travel to the Valhallan Threshold, the Paz system, and scan the planet Garvug to locate the drives. The officer thanks you for your assistance with another 15000 credits.

## DEKUUNA: ELCOR EXTRACTION

**Availability:** Act 2, available as of "Priority: Thessia"  
**Location:** Citadel Embassies

An elcor ambassador desperately wishes to save some of his people stranded on the homeworld of Dekuuna; however, he has been turned away by almost every other diplomat he's asked. Return to the Phontes system in the Silean Nebula, and scan Oltan for any survivors. Return to the ambassador to complete the mission.

## A WORD ON AMBIENT CONVERSATIONS

The Citadel is the center of the galactic community, and while you're running across the galaxy in a desperate bid to save it, you'll oftentimes overhear small conversations between people. Sometimes you may need to eavesdrop on the conversation over the course of many visits to hear the whole story. This can sometimes lead to special options at the Spectre terminal in the Citadel Embassies.

For example, you may overhear a devastated asari commando relate her tale to a psychiatrist at Huerta Memorial Hospital. She wants a gun and a transfer to a facility away from humans. You eventually will see an option on the Spectre terminal to use your status to grant her a gun. The consequences of this will affect a War Asset.

Other conversations you hear require input from Commander Shepard. You can choose to take a specific side during some debates, or lend words of wisdom to a group. While none of these ambient conversations count as quests that are tracked in your Codex, they all grant points to your reputation and affect War Assets. Consider how you deal with these interactions seriously, as they can build up to have an effect on your endgame.

# MULTIPLAYER

A first for the franchise, Mass Effect 3 integrates an intense cooperative multiplayer mode with the Reaper War as it unfolds throughout the single-player campaign. As Commander Shepard fights across the galaxy, four-man squads—representing the best the Citadel races have to offer—are sent into vital enemy positions hit by the Normandy team, intending to maintain the pressure on Cerberus, the Reapers, and the geth. Players are able to step into the shoes of these unsung heroes, fighting against steep odds while trying to complete objectives until they can be evacuated from the field...or until the last soldier falls lifeless to the ground.

## JOINING AND FIGHTING THE GOOD FIGHT

In many ways, the multiplayer mode controls the same as the single-player experience, with some very important differences. The soldiers you create, regardless of race, do not share Commander Shepard's same potential. As individuals, they wield fewer Biotic powers or technical skills, and they can carry fewer weapons. They are not as resilient under fire. Alone, a single mistake makes their death almost certain, even with the best equipment. Working alongside teammates, communicating with them, protecting them, and helping them up when the fight gets rough, all can tip the odds in your favor. You can't afford to be quite as reckless here. Your position in relation to the enemy and your squadmates can be the difference between success and failure.

When you first start up multiplayer, you must create an operative from any of the following classes: Adept, Engineer, Infiltrator, Sentinel, Soldier, and Vanguard. Each class has three active abilities that you can use in combat, and these skill sets change depending on the race played. Humans (male and female) are the starting race for all players, with turians, asari, salarians, quarians, drell, and krogans being unlockable over the course of gameplay. In addition to these powers, each race brings two special skills to every class, which can lean your character closer toward melee or ranged combat.

As you battle through every mission, you gain experience, which goes toward leveling your character and their powers. You also earn credits that you can use in the multiplayer store to further enhance your fighting ability. Buying the offered reinforcement packs in the store delivers to your inventory intensely powerful Cobra missile launchers, emergency Ops Survival Kits, lifesaving Medi-Gel, and spare thermal clips; these can all give you a potential out in desperate situations, while premission equipment enhancements can boost your abilities for the next sortie. You might even score new weapons, enhanced variants of weapons you already own, mods for each gun type, and visual modification options for every race and class, and you may even unlock new races that you can use in future battles.

The peak level for all classes in multiplayer is 20, and these experience levels are shared for every available character in a given class, making it easy for players to switch between an asari or a human in the Vanguard class in order to take advantage of specific abilities. It is possible to Promote a maxed-out class, which sends them away to the front lines of the Reaper War, becoming a War Asset that contributes to the total effort and increasing your N7 rating. You'll have to restart that class from Level 1, but promoting characters continues to contribute to your total War Assets.

Additionally, participation and successful completion of these special operations contributes to the galaxy's Readiness rating across five different fronts that are displayed upon signing into the multiplayer mode. The better your Readiness, the better your War Assets contribute to the fighting. Bear in mind that Readiness does fall by a set amount each day, so if you want to keep it in the green, you should complete these battles to offset this decay. For players without a Shepard to import, this can affect your ending choices during your first run through of the single-player campaign, so to give the galaxy a better shot at surviving the Reapers, you'll want to participate.

# THE RACES

## HUMANS

Upon entering the galactic stage, humans immediately set about making an indelible mark, their devotion to understanding and adapting to modern space warfare stunning the staid Council races. For hundreds of years, they had lived behind secure walls of long-proven technologies and tactics: humanity changed that, unapologetically so.

Male and female humans are capable of taking up all six classes available and are capable warriors in any role. You may miss out on some of the more specialized races' abilities in each class, but the well-rounded humans easily hold their own. Their powers in each class make them quite capable of adapting to any situation as it arises, making them a flexible choice against any opposition and effective support for other races.

This race has one of the best tools for staying alive: the Combat Roll. Humans are relatively small targets as is, and the Combat Roll further reduces their profile, allowing them to make last-second dives for hard cover, evading potentially fatal sniper shots or grenade blasts. Unfortunately, like many evasive maneuvers in the game, you are committed once you begin the roll, and it can be easy to evade directly into even greater danger. While nowhere near as outright powerful as a krogan or asari can be, a human is more maneuverable than the former and can have comparable survivability to the latter, allowing them to stay in the fight through finesse and guile.

## NOTE

All human classes include Alliance Training and Fitness among their powers that can be leveled.

Humans can perform well in every single class, so don't assume them to be merely average. Their abilities combine with just about anything any other race or class has to offer, making them excellent team players capable filling in the gaps of any squad. Particularly efficient killers are human Vanguards, who can Biotic Charge into a crowd, filling up their defensive barriers completely if the power is sped for it. This follows with a Nova that will drain their barrier completely but will seriously damage anything around them. Equipped with only a shotgun to facilitate fast power recovery and to add to their close-range punch, a Vanguard sped for this can repeatedly Biotic Charge around the map from target to target, then Nova and charge away before most man-sized threats have a chance to recover. On the higher Silver and Gold difficulties, reckless tactics like this are not nearly as safe.

Human Infiltrators are also quite effective. Tactical Cloak can boost the damage of Sticky Grenades, while Cryo Blast can slow down or freeze unprotected targets, allowing the Infiltrator or any allies to shatter it moments later. Even if a threat is not frozen solid, just the act of slowing it down allows the Infiltrator and any allies a chance to better line up shots even on the most mobile opponents.

## ASARI

The asari were the first species to discover the Citadel and have since served as the mediators and centrists of the Council. An all-female race, the asari can live for over 1,000 years. Due to the nature of their homeworld, they are also extremely likely to be endowed with Biotic abilities, though not all to the same extent. Natural Biotics, the asari are graceful and redoubtable warriors. Well aware of the limitations of the Biotic barriers they make use of, the asari excel at hit-and-run tactics, making ruthless use of the powerful abilities in order to take out their opponents quickly and efficiently.

Asari are limited to a pair of classes, Adept and Vanguard, but are absolute monsters at both. Asari in both classes can freeze more dangerous foes with Stasis, giving themselves or their teammates a chance to prepare more lethal attacks. In addition, tossing Warp at a foe affected by Stasis can be devastating to light targets and anything surrounding them. Their Vanguards enjoy incredible synergy between a triple threat of Biotic Charge, Stasis, and the unique asari heavy melee—a biotic burst of energy that hits everything surrounding them.

Effective asari players dance in and out of close-range engagements with the Biotic Dash, which drains their barrier in exchange for allowing for precise and swift advances on the enemy or for quick retreats. It's recommended that asari go as light with guns as possible, keeping a heavy pistol, SMG, or shotgun, depending on player preferences, allowing their powers to recharge quickly for repeated use and abuse of their opponents. Of note, the Disciple shotgun has a very good chance of staggering lighter opponents, making it an effective close-ranged tool for aggressive Vanguards.

As effective as the asari biotic burst can be, it is also the slowest heavy melee in the game. Not only is the buildup to the attack lengthy, but also once the burst is executed, the asari takes a moment to catch her breath, during which time she is completely immobile. Against opponents like the Cerberus Phantom or the Reaper Banshee, this delay can prove fatal.

### NOTE

All asari classes include Asari Justicar and Fitness among their powers that can be leveled.

## DRELL

Drell are omnivorous reptile-like humanoids similar in appearance to asari and humans. However, their muscle tissues are slightly denser than humans', granting them a wiry strength that can surprise an unsuspecting opponent. A unique characteristic of the drell is the hyoid bone in their throats, which allows them to inflate their throats and produce vocal sounds outside of the human range. Would-be assassins have noted that these features make drell extremely hard to strangle or suffocate. Though drell may lack the tenacity and rugged durability of other races, their lightning-fast aggression leaves their slower rivals in the dust.

Like the asari, drell are capable of being only Adepts and Vanguard, but they come with a distinct and powerful ability in both classes: Cluster Grenades. Versatile and powerful, Cluster Grenades act similarly to Lift Grenades (which the asari Vanguard are equipped with) but have the potential to strike multiple targets significantly harder and break up groups of enemies lacking shields, armor, or barriers. Even foes with protection can still be staggered, and with the proper specs, Cluster Grenades can boost the damage to foes suspended in midair by 100 percent!

Both drell classes also come with Pull, adding to their innate ability to keep their foes off balance, essentially trivializing Cerberus Guardians. These two abilities can be improved in such a way that the drell become among the best at controlling groups of hostiles; this is a much needed advantage, as the drell are very fragile, crumbling under sustained fire faster than any other race.

Maneuverability and speed are a drell's best friends. Their acrobatic dodges can skirt them out of the line of fire almost as quickly as the Asari Biotic Dash. A light loadout allows a drell to fire off his Biotics rapidly, a necessity for their Adept, who can keep foes weakened with Reave. While it is possible to turn a drell of either class into a melee powerhouse through proper purchases in their passive skills, their fragility makes them a risky choice in close-range encounters, despite their flashy martial arts ability. Players choosing the drell must make the most of their agility and their powers, or they will spend a lot of time waiting for their sturdier teammates to pick them up off the ground.

## KROGAN

Having evolved on a planet where the number-one cause of krogan fatalities until the invention of gunpowder was “eaten by predators,” the krogan harbor an understandably conflict-driven outlook on life. This attitude, along with the natural endowments gifted to them by the harsh wilds of their home planet, contributes to making the krogan nigh unbeatable in their ability to dish out and take damage on the field of combat. Over 7 feet tall and armored like tanks, krogans channel belligerence admirably well in the heat of combat. Though they might be slow, krogan are able to take a tremendous amount of damage before even starting to buckle while in combat, allowing them to cause grievous harm with relative impunity.

Krogan are good at soaking up a lot of damage while dishing out a lot more, and they have to be. They are one of two races that are completely unable to use any form of quick evasive maneuvers, a trait that can kill overconfident krogan. Limited to the Soldier and Sentinel roles, the powers available to krogan enhance their natural resilience, while keeping the pressure on the enemy with skills such as Carnage for the Soldier and Incinerate for the Sentinel. However, where krogan truly excel is at melee range, thanks to their Krogan Berserker and Rage passive abilities. Sentinels with the right boosts in those areas, and with their Tech Armor, are quite capable of using heavy melee blows to one-shot any infantry unit of any opposing force on the Bronze and Silver difficulties! Even their Soldiers can far exceed any other race in overall lethality at close-range melee combat, and they come with Carnage, which can make anything beyond their arm’s reach suffer punishing, armor-breaking damage as the krogan stomps closer to deliver a more personalized beating.

What makes krogan so lethal up close is their ability to enrage. Investing in their Rage power means that any krogan who melee kills three opponents within 30 seconds will experience a boost in melee power, and it can swiftly get to overkill levels with each successive upgrade to this passive ability. With solid support, only the gravest threats, such as the Reaper Banshee or Cerberus Atlas, present real danger to a berserk krogan.

## QUARIANS

A nomadic people, the quarians lost their homeworld to the ravages of their cybernetic creations, the geth, centuries before humanity ever joined the Citadel races. The remnants of their civilization reside within a ramshackle collection of ships known as the Flotilla, which is under constant repair. They live under strict restrictions and exist almost entirely within special environment suits for the majority of their lives, their weak constitutions leaving them deathly vulnerable to diseases and infections that would merely inconvenience other species. Despite these challenges, the quarian people live with the dream of one day defeating the geth and claiming a world to call their own. Despite the stigma attached to the quarians for having created the geth, their technical expertise with machinery is respected and sought after by many races.

Limited to the Engineer and Infiltrator classes, quarians are not a sturdy race by any means, and like the salarians, they are not as mobile compared to humans or asari. However, the quarians are solid in their confined roles. Quarian Engineers are surprisingly lethal, with their Sentry Turrets able to be upgraded in many ways. In addition, their naturally fast cooldown allows a quarian to lay down new turrets in key locations while they or their teammates advance toward objectives. The inclusion of Cryo Blast and Incinerate in their skill set begs to be abused. A light loadout allows these two skills to be rapidly spammed at enemies, and later upgrades in their respective trees significantly boost the damage potential of these combined skills.

Quarian Infiltrators demand the same finesse of their human counterparts, sharing both the Tactical Cloak and Sticky Grenade powers. However, quarians of this class get the surprisingly powerful Sabotage power. Against geth opponents, a skilled Quarian Infiltrator can turn key geth platforms on their allies, even boosting the damage they do or causing them to explode with greater force if they die while hacked. Against enemy forces, Sabotage can cause firearms to backfire against their wielders for additional damage, and can even be capable of hacking Cerberus Combat Engineer Turrets, or even their mighty Atlases.

Generally, as a quarian, you want to keep any threats just beyond arm's reach. Boosting melee strength is not recommended to any quarian player unless they are particularly skilled, and even then, their skill sets are designed in such a way that ranged combat is their strong suit.

## SALARIANS

The salarians were the second race to join the Citadel. Warm-blooded amphibians native to the planet Sur'Kesh, salarians are known for their seemingly hyperactive nature and their racial tendency toward nonlinear thinking, making them excellent scientists and espionage agents. Unfortunately, their high metabolism leaves them with lives that rarely last longer than 40 human years. Salarians are responsible for much of the behind-the-scenes work that keeps the Citadel safe from threats internal and external, and their famed Special Tasks Group is considered a key inspiration for the Spectre program.

Salarians share playable classes with the quarians but operate rather differently. Salarian operatives have limited evasive capabilities, as their sidestep does not cover as much ground as a combat roll or Biotic Dash. They do have good foot speed during a rush from cover to cover, but if they are caught outside of protection, their options are not as solid as those of other species.

As Engineers, salarians are not as well suited to holding a position as a quarian or human, lacking a deployable sentry turret. This makes solo firefights as a Salarian Engineer difficult, requiring a player to constantly scan their surroundings for fear of letting a threat get too close. Fortunately, the Decoy power can help a Salarian Engineer manage the enemy's attentions, opening up new flanking opportunities and exposing weak points. They have better tools for solo survival as Infiltrators, as they can set Proximity Mines to cover alternate approaches, while the Tactical Cloak allows the salarian a brief respite from assault to reposition somewhere more advantageous.

Both salarian classes share the Energy Drain power, which can strip shields and barriers off a target over time and add it to the salarian's own defenses. Energy Drain can be a deciding factor in any encounter involving protected targets. Later levels of this power can provide a temporary armor layer that reduces incoming damage while the Energy Drain is active, providing additional survivability under fire. Light loadouts can allow this ability to be rapidly used, giving a salarian a chance to survive longer under fire. In a group, salarians make for great support units that can facilitate the rapid shield and barrier destruction of harder targets while their more powerful allies finish the job. It is best to stay close to allies, usually at middle ranges from the enemy.

## TURIANS

Turians lack the brutality of the krogan, the skill of the asari, and the virtuosity of the humans, but the general populace adheres to a strict moral code and the turian military is renowned for its formidable discipline. Even if their entire line collapses, they fall back in order, setting ambushes as they go. A popular saying holds: "You will only see a turian's back once he's dead."

Turians share the Sentinel and Soldier classes with the krogan, but outside of their shared inability to dodge or sidestep to safety, they play very differently. Turians do not possess the raw melee prowess the krogan are born with but can still wade into the thick of things with their naturally higher shield ratings and expect to last a little longer than most other races. As Sentinels their shield capacity, combined with active Tech Armor, allows them to stay in optimal range for shotguns, stripping away shields with Overload, cracking through armor with Warp, and detonating their Tech Armor if the enemy gets within melee range.

Turian Soldiers are excellent ranged combatants; the Marksman power allows them to make the best use of assault rifles or semiautomatic sniper rifles, with Concussive Shot and Proximity Mines allowing them to play a very painful game of keep-away with any hostiles. The right boosts in Fitness can keep a Soldier in the game even under considerable pressure, in spite of lacking Tech Armor.

Turians are the best race in the game with Assault Rifles, enjoying a natural bonus to their stability. Their turian Veteran passive ability can reduce the weight of these weapons, allowing them to carry the heaviest ARs with a lighter penalty to their power cooldowns. As such, turians are at their best at midrange, close enough for powerful and accurate fire, remaining just out of reach from enemies with instant-kill abilities.

## BEFORE DEPLOYMENT

Once you've signed into Multiplayer, you can either choose Quick Match, which will find an open game for you, or you can choose to create a new match, public or private. From there, you will need to select a character for your online squad. You have many options for how to prepare your chosen hero for the trials ahead. The gear you bring to each fight, and the choices you make when distributing experience points to your various powers, can greatly improve your squad's chances at surviving in the field, but your pregame prep is not limited to this alone.

Prior to each mission, players can choose from three difficulty levels: Bronze, Silver, and Gold. These difficulties determine how much health your enemies have, how early the more dangerous units in an opposing force begin to appear, their overall aggressiveness, and how proficient they are with their weapons. Bronze is excellent for players getting used to the game and for giving lesser equipped and lower-level players a fighting chance. The Silver difficulty can ramp things up, providing a good challenge for midlevel teams with solid equipment. Gold will test the skills and patience of even the best of the best, turning the most basic enemies into a force to be reckoned with.

### NOTE

Remember that all characters of the same given class share the same experience level, making it easy to switch between different races to better complement your teammates!

You can inspect the loadouts of other players from the game lobby. Use this to determine what weapons you may want to take or to see what a really good player is dominating with.

### NOTE

Your N7 rating is the accumulated character-levels you've earned for each class of character. The only way to push your N7 rating past 120 is by promoting your squads. (A rating of 120 represents all classes maximized to level 20.)

When a class reaches level 20, the player may choose to promote and send the class to their single-player Galaxy at War.

Promoting a class to the Galaxy at War resets its level to 1 but also increases the player's N7 leaderboard score by 10. Only your character's level is reset. Weapons, mods, and consumables are kept.

In addition to difficulty, players can select what forces they will be facing and where the fighting will take place. There are special experience bonuses for randomizing all of these variables; consequently, this can get very, very difficult. These random factors can work in your favor, but the real issue is that you'll not be able to tailor your equipment to special situations. You also might get stuck with a Gold difficulty campaign on a map that favors an enemy you are ill prepared for.

## POWERS

When your guns aren't enough, your character comes with a variety of special abilities to try and equal the odds. Before each mission, check the Powers menu to see if you can't distribute any points to abilities you find most useful. Be very certain of your decisions! If you don't have a respec token, you're stuck with what you purchase once you leave this menu!

## WEAPONS

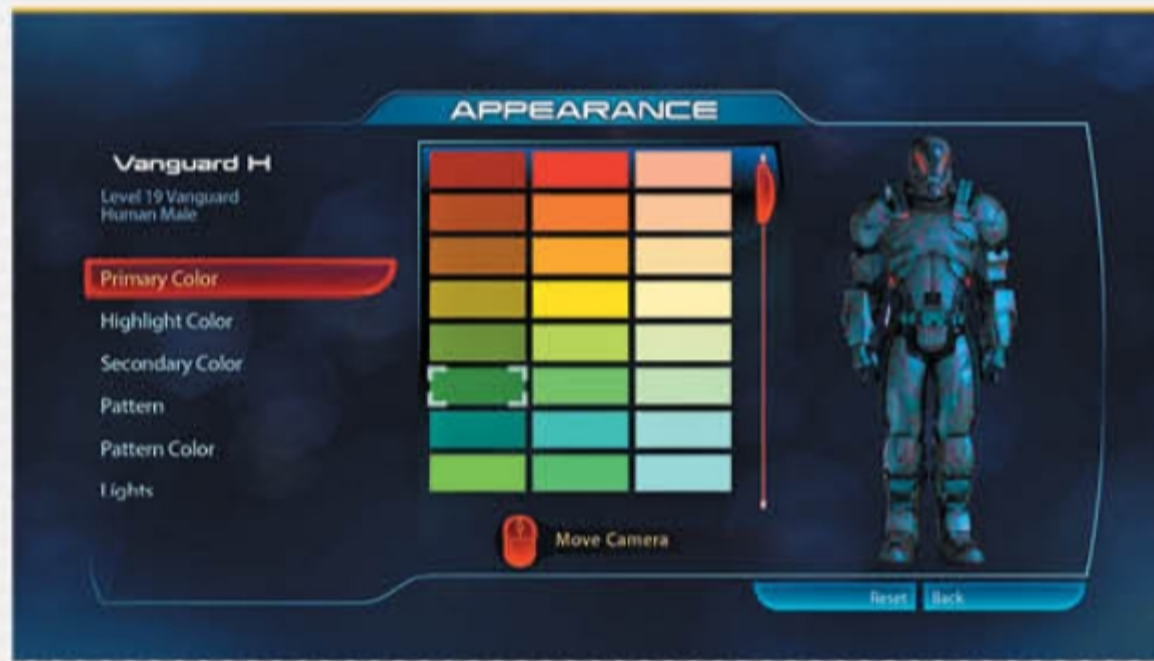

The meat and potatoes for your squad member, the weapon system in multiplayer works almost the same as it does in single-player. Each character has a weight limit they can comfortably manage, and staying under that limit can significantly increase the speed at which powers recharge. Exceed it, and you lengthen the cooldown times. Over time, it is possible to increase a character's carrying capacity with the right points in the right abilities. All weapons can also accept mods to change the various performance parameters.

Where things are different is that a character is limited to two weapons at any time, regardless of their weight. This forces players to carefully consider what they arm themselves with. Some will want to carry the heaviest guns they can, sacrificing power cooldown speed for raw firepower. Others will want to travel light, placing a greater value on using their powers repeatedly and often. Optimal loadouts depend on your preferences. If you're a good enough shot that you want to carry the heaviest sniper rifle possible and keep a shotgun handy for close encounters, you can do that and still come out on top, despite the massive cooldowns you'll have in all of your powers.

## APPEARANCE

Good looks don't count for much in the middle of a firefight, but personalizing your soldier can distinguish you from others on the squad. You start with limited customization for each character as you unlock them, but purchases of Reinforcement Packs will sometimes grant you a Character Training item that will unlock new options over time.

## EQUIPMENT

Arguably the dealmaker or dealbreaker, the extra equipment you bring to a mission is oftentimes the one advantage your team gets. You have four types of consumables available for every squadmate you create.

### COBRA MISSILE LAUNCHER

A certain kill against just about anything it hits, combined with a wide area of effect, makes Cobra Missiles one of the most effective weapons at your disposal. When heavy units have you pinned down, a well-placed Cobra or two can blast a path to survival. Unfortunately, these take time to fire—time you may not have. You need to charge the missile first before cutting it loose. Try to coordinate with your squad when using one of these, or you could be wasting a shot you might desperately need during a later wave.

### OPS SURVIVAL PACK

Consider the survival packs you can carry as your emergency buttons. Ops Survival Packs will restore your health and shields as long as you're still on your feet. Once you go down, you must either resort to Medi-Gel, or hope that squadmates are close by to pick you back up.

### MEDI-GEL

When you are inevitably taken down, you have a few options. One is to wait for the enemy to execute you. Another is to hope your squadmates can get to you in time to pull you up before you bleed out. And then there's Medi-Gel you activate for yourself. You stand immediately where you were taken down, with the amount of health restored depending on what difficulty you're playing on. You're quite vulnerable during this revival, as you do not have your shields, so pay attention to your surroundings. There are also certain things you can't come back from. Cerberus Phantoms and Atlases, for example, have instant-kill melee strikes that leave you out of the fight for the duration of the current wave.

### THERMAL CLIP PACK

If you're paying attention, you'll see ammo crates strewn throughout each level, but inevitably, there will be times when you are cut off by overwhelming forces and can't simply run past the enemy to grab ammo. You can use Thermal Clip in a pinch to restore your ammo including all of your grenades, saving you from having to break cover, saving you from having to break cover.

#### NOTE

You start out being able to carry two of these items apiece, but very rare reinforcement pack cards can boost your capacity up to ten!

### BONUS EQUIPMENT

In addition to the four types of consumable items, through purchases at the store you also unlock Bonus Equipment that can enhance three major categories: Ammo, Armor, and Weapons. These items are good for only one mission, so make the best use of what you equip!

**Ammo Bonuses:** These take the place of the Ammo Powers that Shepard and his allies use. If you know what you're going up against, you can pick specific ammo types that best suit the scenario. If you're playing against randomized opposition, even less-than-ideal Ammo Bonuses are better than no bonus at all.

**Armor Bonuses:** These can enhance your shields and your resilience to damage once your shields fail, and they can even improve the strength of your melee strikes.

**Weapon Bonuses:** These can improve the damage and accuracy of a specific gun. This is particularly useful for players packing a single firearm. A good Weapon Bonus can boost the damage of a gun significantly.

## THE STORE

The store is the most important part of your preparations, so it benefits players to accomplish the assignments in each mission and survive to be extracted from the battle zone in order to earn the most credits possible. It contains three distinct reinforcement packages that provide consumable items for use mid-mission, new weapons and mods, special equipment for predeployment preparations, character unlocks, and experience bonuses. Any time you unlock a weapon or character customization option, it becomes immediately usable, but if you get the same weapon or customization, you level up the weapon or gain experience for that character class.

### STARTER PACK

All players accessing Multiplayer for the first time receive a special Starter Pack that comes with basic supplies and a character unlock or an uncommon weapon. Consider this pack a taste of things to come.

### RECRUIT PACK

The Recruit Pack is the most basic of all the standard packs. You'll get limited consumable supplies from each purchase, but the low cost offsets that. More importantly, the starting weapons tend to be quite common here, so it is possible to level up those guns very quickly if you're lucky. Basic weapon mods are also available, and you occasionally get special Ammo, Armor, and Weapon Bonus equipment. There is a very rare chance in this pack to unlock new characters and higher-tier weapons.

### VETERAN PACK

A step up from the Recruit Pack in every way, this pack provides a much greater number of consumables for use in mission. The special bonus equipment comes in stronger varieties here, and your chance to unlock new races is significantly increased, which can lead to some nice experience bonuses. You start seeing the rarer guns in this pack, and while they are not always direct upgrades, the added variety in your arsenal can help better customize your character to fit your play style.

### SPECTRE PACK

The big daddy of all the reinforcement packs—and for very good reason. Your chances of getting the rarest guns are highest here, including Spectre-issue gear found in the single-player campaign. Weapon mods can easily be leveled up here, and the Bonus Equipment that you receive is often at the highest levels. Character Unlocks and Appearance modifications have the greatest chance of appearing here.

#### NOTE

Future promotions and additional packs may appear at the store, so pay attention to it even if you're not buying anything.

## IN THE FIELD

Once you're ready to go, the only thing left to do is actually get on with your assignments. The enemy is hell-bent on putting you and your team down for good, and they've got the numbers and firepower to do it. Each battle consists of 11 waves that you must survive to get full credit for the battle. Losing takes away special completion bonuses that make up a good chunk of your payout in experience and credits, but don't be discouraged! Even making it partway through any battle can earn you some rewards that can go toward improving your character and your gear.

## SPECIAL ASSIGNMENTS

During each mission, on specific waves (3, 6, 10, and 11), your commander will radio in new orders, starting an objective-based mode that you must complete before time runs out; otherwise the whole mission is considered a failure and you're booted back to the Score screen to contemplate what you could have done better. Each of these objective modes are simple in premise but make things difficult during that specific wave for one good reason: until you complete your objectives, the enemy will continue to send in reinforcements. On higher waves and difficulties, certain objective modes become small nightmares that will have you wishing you didn't blow certain items earlier in the fight.

Once an objective wave begins, players should endeavor to complete it as quickly as possible, as a cash bonus is awarded if the objective is achieved with time to spare.

## ASSASSINATION

The idea behind Assassination is quite simple: kill the target marked on your HUD. The target can be anything. You might luck out and your target will be the lowest-level enemies of a given force, or you might get four of the toughest units in a row. In most cases, the designated target is a bit more evasive, more prone to retreating once you get close. If it is a particularly hard target, it might stand its ground and fight. All targeted hostiles are tougher than others of their kind, enjoying a boost in stats across the board. Work with other players and try to cut off any avenues of escape, and unless the enemy becomes particularly annoying, try to ignore them in favor of taking down the targets. You start with limited time to kill the first target, but killing it will grant you a time bonus that will help you hunt the next victim.

## HACKING

Hacking mode requires players to stand within a certain distance of a marked objective, allowing information to be uploaded to or downloaded from a server. The more players are inside the marked area, the faster the bar indicator fills. You have a limited amount of time to complete this objective, so try to keep the whole team inside the marked radius. The problem with this is that with every teammate in the same area, you can find yourself in a bad spot, especially in later waves when tougher threats make an appearance. It's possible to lose a four-man team in seconds if Cerberus Phantoms break through your defenses.

## ENABLE/DISABLE DEVICES

Enable/Disable Devices places four targets around the map in random locations, with only one accessible at any time. The squad needs to reach each target and access it, and there's a time limit in play that restricts how long you can fool around between objectives. Only one person can actually hack the device. Other teammates need to watch over their very vulnerable comrade as they go to work. This mode is less frantic than Hacking or Assassination, and the devices themselves don't take very long to deal with, but the problems from Hacking are still present here. The team must be at set locations to do this objective, and this means you are vulnerable to getting pinned down in positions that are not easily defensible.

## EXTRACTION

This is the final objective in any battle. On the 11th wave, Command radios in that an evac transport is on the way and will arrive in two minutes. All squad members must be at the designated landing zone (LZ) by the time it arrives, or they will be left behind, costing the group a hefty bonus. There are many ways to accomplish this objective, and they apply to every map. Some squads may prefer to stand and fight at the LZ; this is a risky but profitable solution, as the enemy will continue to rush the squad no matter where it goes. Others might prefer to fight as far away from the LZ as possible, making a desperate run in the last minute (or less), therefore drawing heavier and slower threats away from the objective and making the final seconds of the last stand considerably easier. For the full bonus award, all squadmates must be standing; nobody can be dead or incapacitated.

## BONUS MEDALS

In addition to the extra cash you can earn for completing objectives swiftly, there are medals players can earn during regular gameplay to boost the total experience they earn at the end of a round, on top of the universal squad experience total. Many of the awards come from a certain number of kills, either through melee attacks, Biotics or Techs, or with any of the five gun types. Others still reward headshots, assists, or revivals of squadmates. As you grow more skilled and earn more powerful weapons and equipment, you can earn medals at a faster rate, making it possible to build up soldiers more quickly so that they can be promoted into War Assets for the single-player campaign.

### INDIVIDUAL MEDALS

There are a total of 39 medals players can earn for individual exploits across 13 different categories. Each medal category has three levels: bronze, silver, and gold, all worth a designated amount of experience points.

## SQUAD MEDALS

In addition to the Individual medals, Squad Medals are awarded to all players in a match if they meet certain conditions.

### Killstreaks

Killstreaks are when the player squad kills five enemies within one second.

**1 Killstreak:** 2,500 points

**2 Killstreaks:** 5,000 points

**3 Killstreaks:** 10,000 points

### Waves Survived

To earn a medal in this category, no players must be executed by hostile forces or be allowed to bleed out for the prerequisite number of waves in a row.

**3 Waves Survived:** 2,500 points

**5 Waves Survived:** 5,000 points

**10 Waves Survived:** 15,000 points

### Difficulty Challenges

These medals are a bonus for completing a full game in any of the three difficulties.

**Bronze Challenge:** 2,500 points

**Silver Challenge:** 5,000 points

**Gold Challenge:** 10,000 points

### Extraction

The 11th wave of any match is the Extraction phase. There are bonuses for full team survival and partial survival.

**Partial Extraction:** 5,000 points

**Full Extraction:** 15,000 points

### Unknown Variable

To earn these medals, the lobby must set the map and enemy forces to "Unknown," which will randomize these options.

**Unknown Map:** 2,500 points

**Unknown Enemy:** 5,000 points

## THE ENEMY

Across six different worlds, you will face three distinct enemy forces: Cerberus, the Reapers, and the geth. Each has their own set of units that perform very differently, depending on the circumstances. You will likely have seen them in the single-player campaign, but you were Shepard then. You don't have those same advantages here.

### CERBERUS

Of the three opposing forces, Cerberus is the most tactically minded. Their soldiers act with some sense of self-preservation, moving from cover to cover, attempting to flank the players as much as possible, using the jump-jets on their suits to take up elevated positions on their victims. They will use smoke and frag grenades to deceive and destroy careless players, while their stealthy Phantoms sneak past and kill the unsuspecting from behind. Their Atlas heavy mech is slow but is also a massive gamechanger, able to stomp through all but the heaviest fire (or one or two well-placed Cobra missiles) while laying down withering cannon fire or dropping unshielded squadmates with homing rockets.

#### ASSAULT TROOPER

The most basic of all Cerberus infantry, Assault Troopers frequently use frag grenades to force stubborn players out of cover, and they coordinate their fire with other units. They have decent footspeed, allowing them to flank a squad, or reach a downed player to execute them before help arrives. At range, the Assault Troopers make extensive use of the M-25 Hornet Submachine Gun, which can tear down shields and health with surprising speed. Their biggest weakness is their lack of shielding, making them easy marks for any class. Their lack of protection makes them especially vulnerable to Tech and Biotic combo explosions that can hurt or kill their fellows. On higher difficulties, it's almost welcome to see these guys hanging out too close to more important units.

#### CENTURION

A step up in every regard from the Assault Trooper, Centurions come with kinetic shields and the dangerous M-96 Augmented Mattock Assault Rifle. While their increased resilience and damage potential is an obvious threat, what makes them especially dangerous is their use of Smoke Grenades. Centurions will often use these to hide the approach of other units, and unless you've got the mods or bonus equipment to target through the smoke, very unpleasant things could be sneaking around behind it without your knowledge.

## GUARDIAN

Guardians are essentially Assault Troopers with heavy ballistic shields. Alone, annoying, but in pairs or more, Guardians can easily fluster and kill less disciplined players with their ability to soak up so much incoming fire. Up close, Guardians use their shields as melee weapons, and during their slow march toward players, they fire powerful shots from their M-358 Talon Pistols. Biotics with Pull or Singularity can remove their shields, allowing them to be taken down with greater ease. Skilled snipers can fire right through the view slit on the shields for headshots, but this can be rather difficult in spite of the slow speed at which Guardians travel. Armor Piercing Ammo, as well as guns with penetration mods, can allow you to shoot through their thin shields. Powerful direct hits to the shield can also stagger a Guardian, leaving them more vulnerable to incoming fire from in front. Squads can also coordinate flanking maneuvers on a Guardian to get at their exposed backs.

## COMBAT ENGINEER AND TURRETS

Combat Engineers join the fray with kinetic shields and an M-5 Phalanx Pistol. What makes them really dangerous are the Sentry Turrets they can deploy. Turrets can lock down whole areas with their blistering fire, forcing players to stay in cover while trying to deal with it and the other Cerberus troops advancing under its protection. As soon as you spot an Engineer, do not give it the opportunity to deploy a Turret. Worse still, Engineers will attempt to repair any active Turrets or Atlases in their vicinity. It is possible to snipe the Turret on the back of a Combat Engineer with a high-powered sniper rifle before they deploy it for an instant kill—a goal to aim for. Turrets can also be sabotaged with the right powers and turned on their masters.

## NEMESIS

These ladies of long-range combat can drop an unassuming player from across entire maps with their M-13 Raptor Sniper Rifles, if they've got a line of sight on them. They make a distinctive vocalization that lets you know they are on the field. However, despite their obvious lethality at range, they are far from the worst Cerberus has to offer. If anything, they are almost like pests, running away when players draw near. In Assassination mode, their mobility and foot speed prove to be huge annoyances. Cryo Blast can slow them down, even if they are shielded, and any teammate with that ability should tag a Nemesis with it.

## PHANTOM

Phantoms are the assassins for Cerberus, and despite their lithe builds, they are among the deadliest foes you face. They can instantly kill a player from in front or behind with their swords, they come with a powerful Biotic barrier for protection, they can absorb incoming Techs or Biotics with a wave of their hand, they are extremely agile, and on top of all this, they can cloak. Do not take Phantoms lightly under any circumstances. Do whatever it takes to stay outside of melee range with them unless you're approaching from behind or they are preoccupied with something else. Even when their barrier is down, they can still use the sword to shrug off incoming fire. Get that away from them by shooting it when it isn't at the ready, but good luck doing that when the Phantoms are moving. Like the Nemesis, a Phantom has a distinct vocalization that lets you know when one, or several, are on the prowl.

## ATLAS

The largest thing Cerberus will send your way in multiplayer is the Atlas heavy mech. Unlike ones found in single-player, these cannot be hijacked. They retain their high-damage cannon, homing missiles, and incredible resistance to incoming fire. If there's anything that deserves a Cobra rocket, it's these guys. Despite their size and slow speed, Atlases can find their way into places you would not expect to see them, taking up whole passageways with their girth. Getting close to one is also a bad idea, as in addition to their standard melee swipes, they do have an instant-kill grab and smash move. Shots directly to the cockpit do more damage, but that typically also means you're inside its firing arcs. A safer target would be the thrusters on its back.

## THE REAPERS

"Calculated mindlessness" best describes the Reaper ground forces, as they throw themselves into the line of fire. A single wave of Reapers may not seem intimidating at first, particularly early on, until you see Marauders actively upgrading Husks and Cannibals, turning even those basic units into bullet sponges. Ravagers snipe with their powerful guns from afar, capable of dropping even a maxed-out character in two or three rapid shots, while Brutes bowl through anything and everything just to get a piece of you, assuming the Banshees didn't reach you first. During later waves, the Reapers relentlessly hound players across whole maps with a fervor not found in the other forces.

## HUSK

The basic Reaper ground unit, lone Husks are not threatening. They simply try to close the range with the players and engage them in damaging melee holds. They are not particularly resilient and are highly vulnerable to incendiary techs or ammunition. However, Husks are threatening when they work in conjunction with other more dangerous units. Surprisingly fast, Husks can ambush players from their flanks. While you try to shake off a Husk, you are vulnerable to every other Reaper unit in the vicinity.

## CANNIBAL

Hideous piles of indoctrinated flesh on legs, Cannibals are a step up from Husks and can fight at range with their modified arm cannons. Their unique trait is that they live up to their names, crouching near the corpses of fallen Reaper troops, consuming them, and gaining layers or armored protection. They can even consume the bodies of downed players. Fortunately, they are vulnerable while doing this, so players can deny them a chance to become greater threats with relative ease. However, during running firefights between objectives, you may not have the time to ensure that each Cannibal doesn't get an uncontested meal, meaning players can suddenly find themselves slammed by a wave of harder-to-kill Cannibals while also dealing with anything else in the area. As with the Husks, incendiary powers go a long way toward dispatching a Cannibal, though upgraded ones may resist this. Try freezing their cannibalized armor with Cryo Blast, if it's available.

## MARAUDER

These unfortunate turians fill the heavy combat support role in the Reaper forces. Resilient even after their kinetic barriers have been disabled, Marauders still retain portions of their combat training from a previous life, taking cover and working in tandem with other forces. Their Phaeston Assault Rifles are incredibly accurate, making a rush on a Marauder risky if they've got a bead on you. What makes Marauders particularly threatening is that they can heal and even improve Husks and Cannibals, making them tougher to kill. The process of this does leave a Marauder vulnerable, so if you catch one in the act, put it down decisively. Unchecked, Marauders can take a fairly basic Reaper force and turn it into a graver threat.

## BRUTE

The Reaper Brute exemplifies the nature of their tactics: crushing the enemy with overwhelming force. Even a krogan improved entirely for survival would be hard pressed to withstand the beatings of a Brute. They are not only strong, but also faster than their size would have you believe, bounding across the battlefield and delivering powerful swipes of their claws, easily shattering the defenses of any player. It takes a well-placed headshot with a sniper rifle to even slow one down. As with any other hostile target with an Armor health bar, incendiary tactics can help bring a Brute down faster, but the one true way to expedite their departure is with a Cobra Missile, and players will probably want to save those for something worse.

## RAVAGER AND SWARMER

In some ways, Ravagers can be worse than just about anything else in the Reaper arsenal. Tough to kill for their size, Ravagers come to the field armed with a pair of high-powered cannons that can flatten a player in seconds. Fortunately, these weapons telegraph themselves by projecting visible blue targeting lasers at their chosen victim before firing a barrage. Multiple Ravagers can be utterly devastating at range, turning Hacking situations sour very quickly as their cannon shells' area of effect punishes players for being too close to each other. Making things worse are the fact that Ravagers act as the transports for Swarms, which are annoying little bugs that are easy to kill individually but are also easy to ignore when other more obvious threats have your attention and can do damage to inattentive players, denying their shields a chance to recharge.

## BANSHEE

Banshees announce their arrival in two distinct ways: a scream that lives up to their name, and a scream of surprise from the player they just executed. These former asari Ardat-Yakshi retain all of the Biotic power they possessed in life, floating over the battlefields in a deceptively slow manner, protected from incoming fire with their powerful Biotic barrier. They may seem slow, but be extremely careful of how close you get to a Banshee; they also retained the ability to use a Biotic Dash similar to what asari players have available, only it is much faster, has greater range, and can be used in very rapid succession. Should a Banshee close distance with a player, they will casually lift their victim into the air before stabbing an arm clean through their body for an instant kill. Banshees can be surprisingly quiet while closing in on an unsuspecting player, often sealing the deal with a quick series of Biotic Dashes leading into their fatal melee strikes. Do not feel hesitant to break out the Cobras for multiple Banshees, especially during Extraction!

## THE GETH

The old shame of the quarians, each geth platform is actually a collective consciousness that works toward consensus, which includes consensus on how best to deal with the Citadel teams being sent to stop them. Geth assaults are as relentless as any other opposing force but are marked by the great accuracy each platform possesses with their chosen weapon while marching toward the players, which only gets worse the more geth are approaching. Of special note are Geth Pyros and Geth Rocket Troopers, both of which are hardened targets that provide very specific kinds of problems at short and long ranges. The Geth Prime's heavy firepower can really blindside a team in areas with plenty of flanking routes. While not as dynamic as the Reaper or Cerberus forces, the geth more than make up for it with their unflinching assaults into anything the players can muster. Disruptor ammunition and powers like Overload or Sabotage are invaluable against geth, so if you know they are your opponent, pack accordingly.

## GETH TROOPER

The basic geth platform is little to be concerned about. The sheer size of their heads makes them excellent fodder for sniper rifles. They lack any form of protective shielding and are not particularly fast. What they do have at their disposal are their incredibly accurate Pulse Rifles as they march toward you. A swarm of Geth Troopers can cut down a player out of cover in short order.

## GETH ROCKET TROOPER

The next step up in geth platforms, the Rocket Trooper is armed with powerful homing rockets that can dislodge players from light cover and shatter their protective shields with a direct hit. Individually, a Rocket Trooper can be a threat, but combine their steady barrages of high explosives with other geth on the attack, and you have one of the more dangerous support enemies in the game. Once Rocket Troopers get involved, snipers should single them out for destruction, if only to relieve some of the pressure they bring to the fight.

## GETH HUNTER

The Geth Hunter has one primary mission, and that is to sneak up on players who are preoccupied with other more obvious threats and bring them down with point-blank Plasma Shotgun blasts. As intimidating as this sounds, it truly comes into its own on higher difficulties. Once Hunters are in play, watch for the distortions their optical cloaks make among other geth. Hunters tend to use the confusion of battle to slip right past the noses of a squad before unloading into their flank.

## GETH PRIME

The largest geth platform you'll face in multiplayer, the Prime brings heavy firepower in the form of its charging plasma cannon and combines it with great survivability, even under sustained fire. However, if the Prime doesn't have decent support, a squad can deny it a chance to even make use of its weapons. It's imperative that players remain alert when a Geth Prime is in the field, as its cannon can bring a lighter class or weaker player down in a single shot! Also be on the lookout for the variety of defensive turrets and the combat drones it can deploy.

## GETH PYRO

Geth Pyros can be the most dangerous platforms if players are caught unprepared; their geth Flamethrowers unleash a short-ranged swath of searing flame on any hostile target that draws near, draining shields and health at an incredible rate. Their shields and armor are strong enough to allow them to last against undisciplined fire to unleash their fury, but they suffer a fatal flaw: the fuel tank on their back. Skilled snipers can pop the tank from afar in any direction, or those in close range can strike from behind. Overload and Sabotage are also effective, and the result is a powerful explosion that can kill other nearby geth.

# LEVEL STRATEGY

The six available levels you will fight for are enclosed locations, divided into named areas that will appear onscreen as you enter them. Typically, your objectives during the third, sixth, and tenth waves are going to take place in randomized locations, with the final extraction wave always occurring at a set location. Because of the changing nature of how the enemy arrives in every level and the randomized objective locations and modes, you will have to be more flexible in how you approach these battles.

## SURVIVAL TIPS

### COMMUNICATE

Communication is probably the most important piece of advice in any multiplayer game. With no radar to easily track the movements of your enemies, locating them is entirely up to your own eyes and ears. Your teammates may have missed that Phantom that slipped around to the side, but if you didn't, you should probably let the rest of the group know that cloaked death is nearby. Communication also allows for you to properly set up defenses, coordinate Biotic or Tech combos, and conserve the few consumables of each squadmate. Even before an actual match, teammates should let each other know what sort of firepower they are packing, the equipment they have, and what class they prefer to play as. A team that communicates will almost always fare better than one that doesn't.

#### NOTE

Voice chat settings for communications are found in the Options panel.

### STICK TOGETHER

Any enemy will die faster under a combined assault, and your chances of being rescued from being downed dramatically increase when a squad is actually working as a squad. Unless your team is supremely powerful or supremely confident, there's no bonus for being a lone wolf, particularly during late-game waves where a single player will be very hard pressed to deal with everything headed their way. On higher difficulties, bleeding out is a real danger for loners, because the action is usually too hot for your teammates to risk making their way to you.

### STAY MOBILE

You obviously don't want to be running around while under fire, but it's a good idea to not be tied down to one position unless an objective calls for it. Even then, you should know what your options are so that if your little piece of real estate is about to be overrun, you know where you can fall back to, and where you can go to flank the enemy. If for whatever reason you're the last man standing in a squad, or you're trying to complete a map solo, staying on the move is your best chance of survival.

### KEEP YOUR HEAD ON A SWIVEL

Your enemies are not only aggressive, but also fairly smart. They will seek alternate routes to any location a player is bunkered down in, and they will ambush you from behind if you become too focused on what is directly ahead. Scan your surroundings once in a while to prevent unpleasant surprises.

### SHORT, CONTROLLED BURSTS

With the Spare Thermal Packs and the ammo crates lying around each level, you effectively have infinite ammunition for any gun you bring. That doesn't mean it's always a good idea to hold down the trigger and spray at advancing foes. Make sure you're hitting what you are aiming at. Running out of ammo in the middle of a firefight is a potential death sentence on any difficulty, so make what you have count.

### MAKE CONSTANT USE OF YOUR POWERS

With the weight system giving bonuses to power cooldowns if a player is packing light, their powers can be almost constantly available. Take advantage of this. A Vanguard being able to constantly charge, an Engineer spamming Cryo Blast or Incinerate, or an Infiltrator cloaking to boost every sniper shot, this all serves to boost how much damage you do to every enemy.

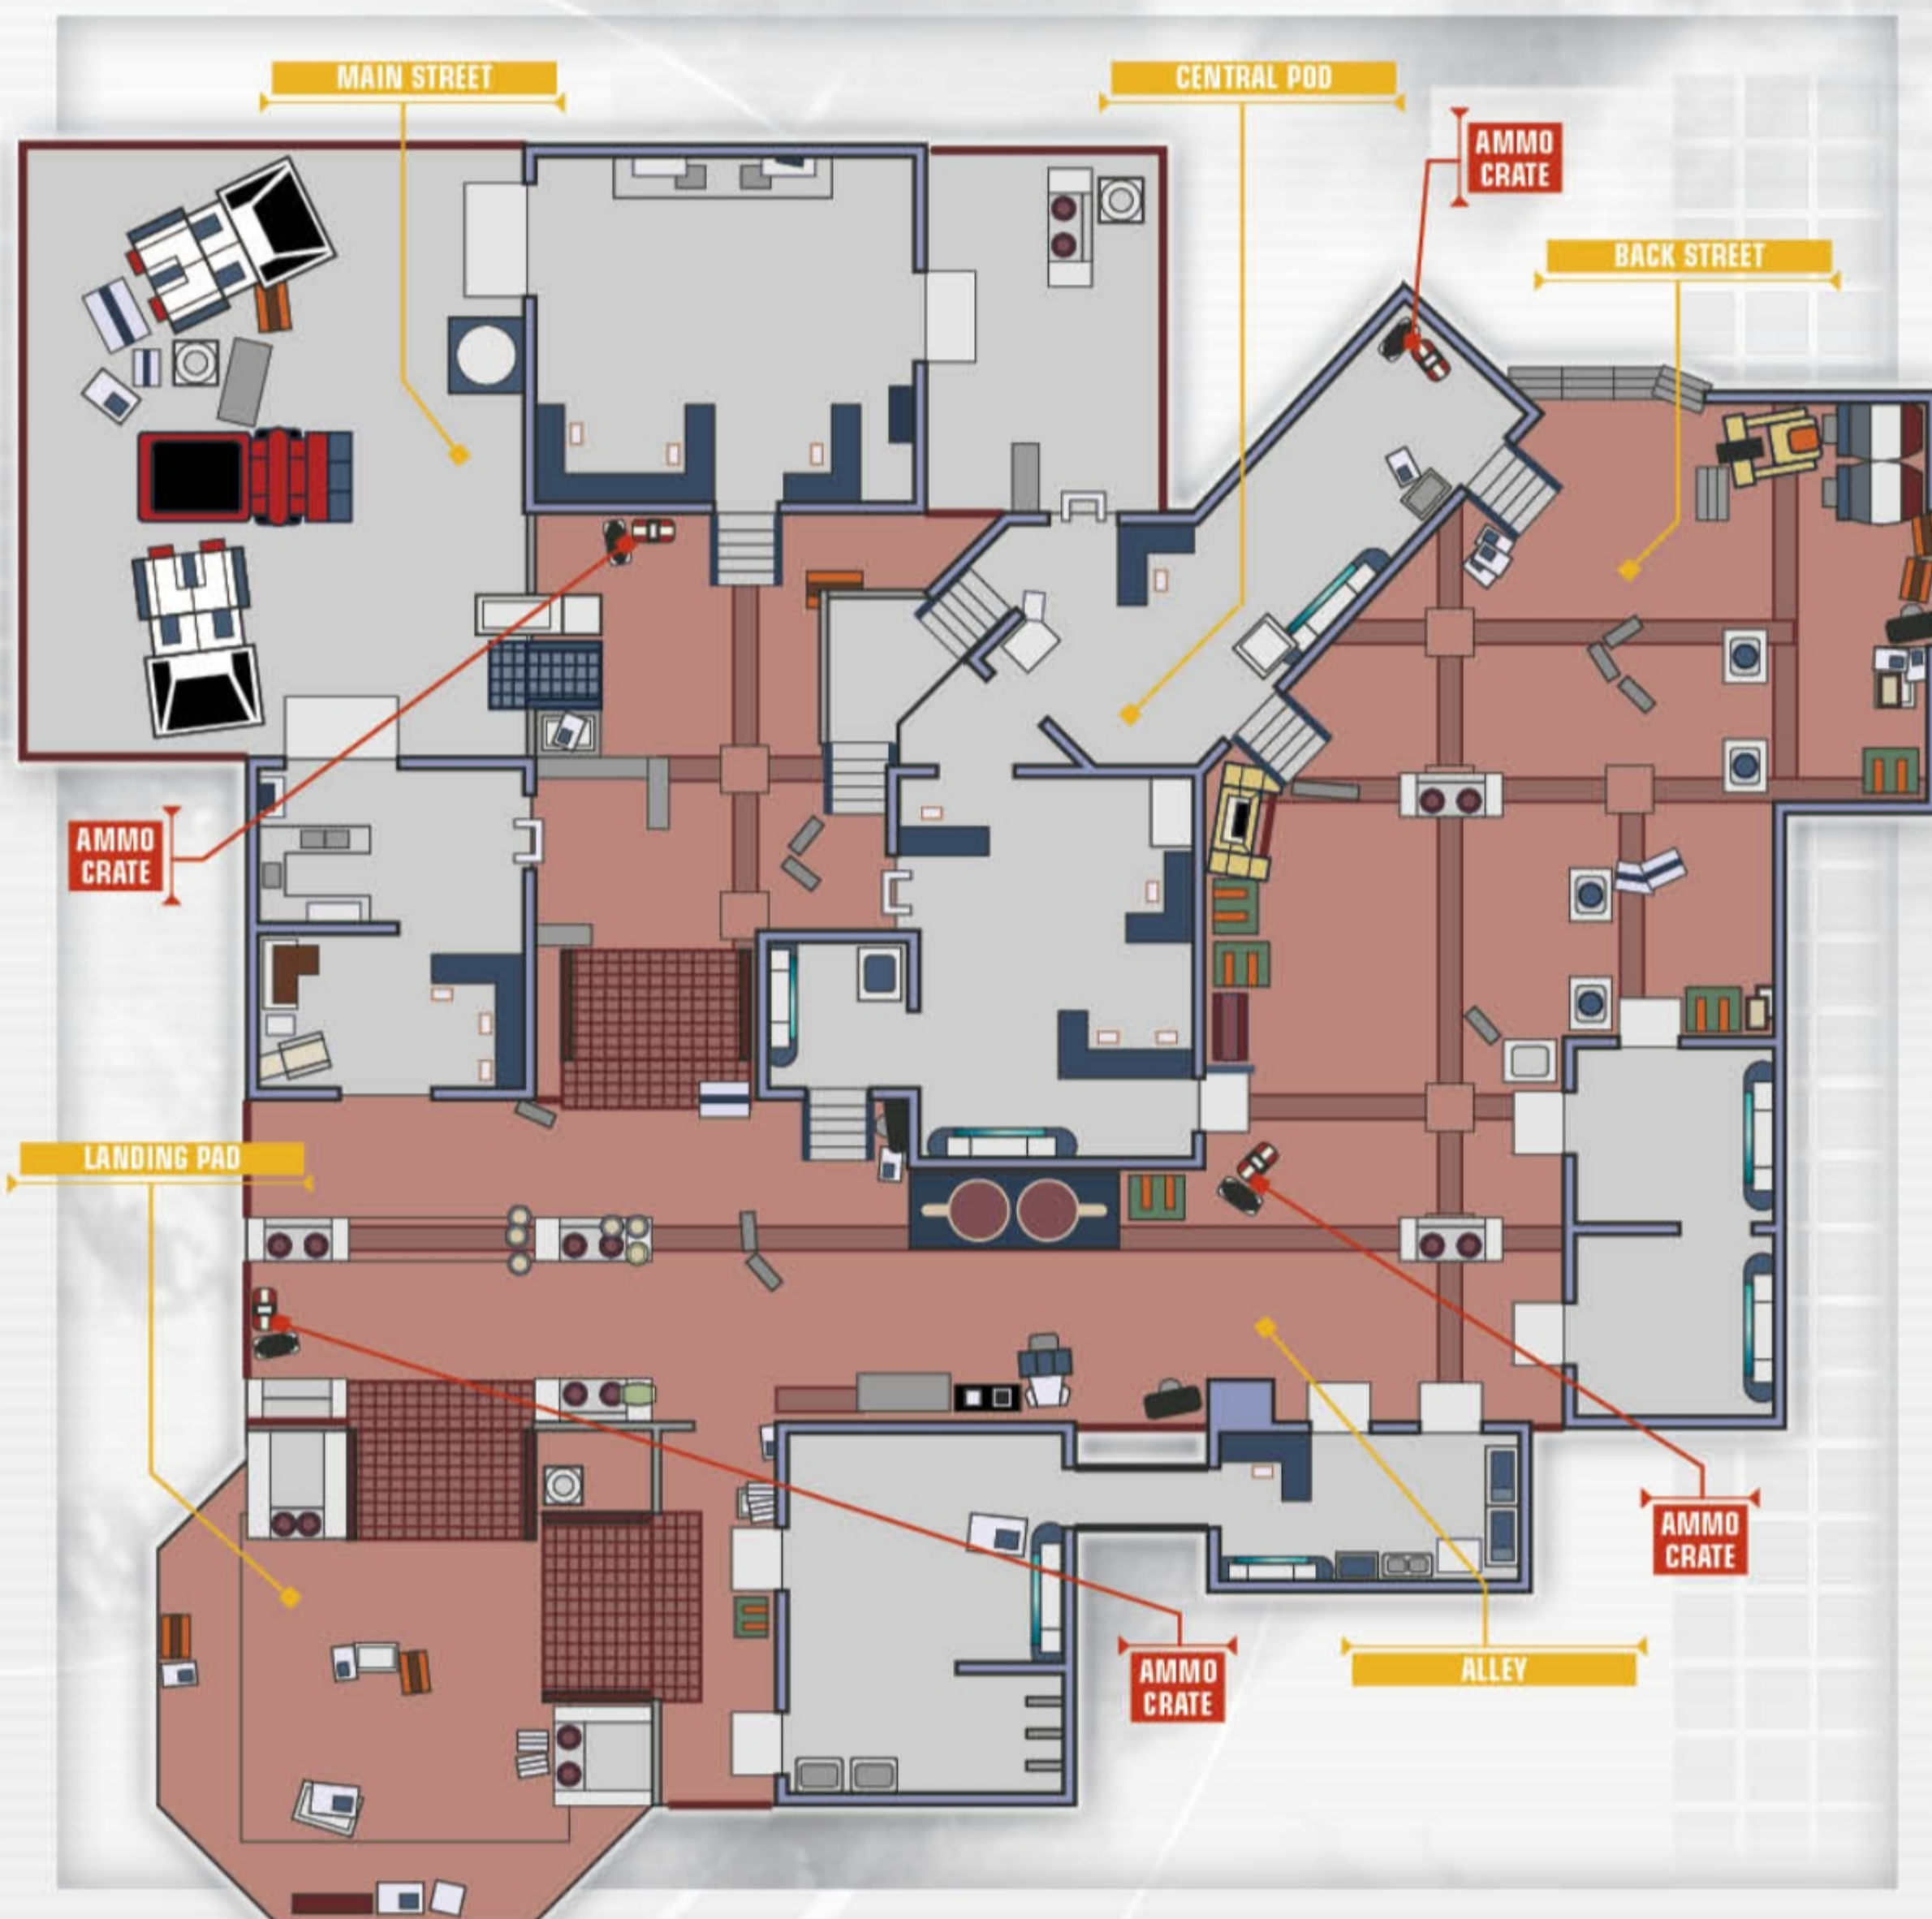

### CONSERVE ITEMS

It might be tempting to use your Ops Survival Pack the moment you get low on health, or to immediately pop a Medi-Gel as soon as you hit the ground, or to blast that lone Assault Trooper with a Cobra missile, but try to make these resources last into the final waves of any mission. An ally can help you up, and an Atlas might be more deserving of Cobras.

# THE BATTLEFIELDS

LOCATION: GHOST

Ghost takes place in the slums of a fallen colony within Alliance space. There are alleys and small living spaces that lead into wide-open spaces, with plenty of cover strewn throughout. A distinctive feature of this map is its vertical nature. Cerberus in particular has units capable of leaping to the upper decks of the living quarters, well outside of physical reach, to rain fire down on players. Each building is a very tight space with little room to maneuver, forcing melee-range combat, while the more open spaces are typically surrounded by positions from which the enemy can maintain overwatch. Ghost makes a good map to familiarize players with how all the enemy forces act at various combat ranges.

Ghost has five sections: Alley, Back Street, Central Pod, Landing Pad, and Main Street.

## ALLEY

The Alley is potentially one of the most hotly contested areas of the entire map. Acting as a connecting area to the Central Pod, the Landing Pad, and the Back Street, this dirty strip and the small building it borders can act as a major choke point for both players and opposing forces. If the player squad loses control of the Alley and is pushed back toward the Landing Pad, the team can find themselves surrounded from every possible entry to the Pad, with enemy troops getting not only the height advantage, but also the cover advantage. Squads should endeavor to take control of the structures lining the Alley, using the tight quarters to funnel in the enemy, while also taking advantage of the ample cover the structure provides. On higher difficulties and later waves, the streets can be a bloodbath. Atlases will break into any structure on the map, and their sheer size can cut off an escape route. There's not much you can do about that beyond killing them as quickly as possible. Cobras in close quarters are a risky prospect for the person firing them, but you can also clear whole rooms of resistance this way.

## BACK STREET

Tied directly to the Central Pod and the Alley, the Back Street is one of the more open spaces on the map. There is plenty of cover in front of the entrances leading to the Central Pod, including the pillars, which make good cover spots for squad members and enemies alike. If your back is to the Central Pod entrances, watch for enemies coming through there from Main Street or the Landing Pad. They also will come from the Alley section after spawning in the buildings there or from the Landing Pad. The Back Street is surrounded from above and has many convenient sniping positions for enemy forces, Cerberus in particular, to use to force defenders back into the Central Pod or any of the other buildings lining Back Street or the Alley. Be especially vigilant regarding this!

## CENTRAL POD

The central living space sandwiched by the Alley, Back Street, and Main Street, the Central Pod structure is a long building broken into a pair of rooms. The Alley-side room is the larger of the two; the smaller room is between the Back Street and Main Street, with ramp and ladder access to both. While the Central Pod does provide protection from rooftop snipers, battles for control inside the structure can get very messy. There's not a whole lot of room to maneuver in either of the Pod's main rooms. The smaller of the two can be easily compromised by determined pushes from the multiple entryways. On later waves or difficulties, minimize the time you spend in the Central Pod unless you are confident in your firepower and your squad's ability to lock down the many entryways the enemy can take inside.

## LANDING PAD

Battles at Ghost begin and end at the Landing Pad. By far the most open and accessible part of the map, the Landing Pad has little in the way of hard cover. The ramps leading away from it are elevated, meaning that the real danger here is getting pinned down on the pad while enemy forces use the walls on the elevated areas; the buildings leading to Main Street, the Alley, and the Central Pod; and the rooftops to gain excellent overwatch on the entire pad. If you have to make a stand near the Landing Pad, do it on the elevated section, either in the building leading to the Alley or on the side closest to the ammo crate. Use the boxes and the building next to them that overlooks Main Street to help maintain a kill zone over the Alley, the Central Pod, and anything traversing the lower levels. The Pad has no easily accessible supplies, which can make holding the extraction point on Wave 11 difficult.

## MAIN STREET

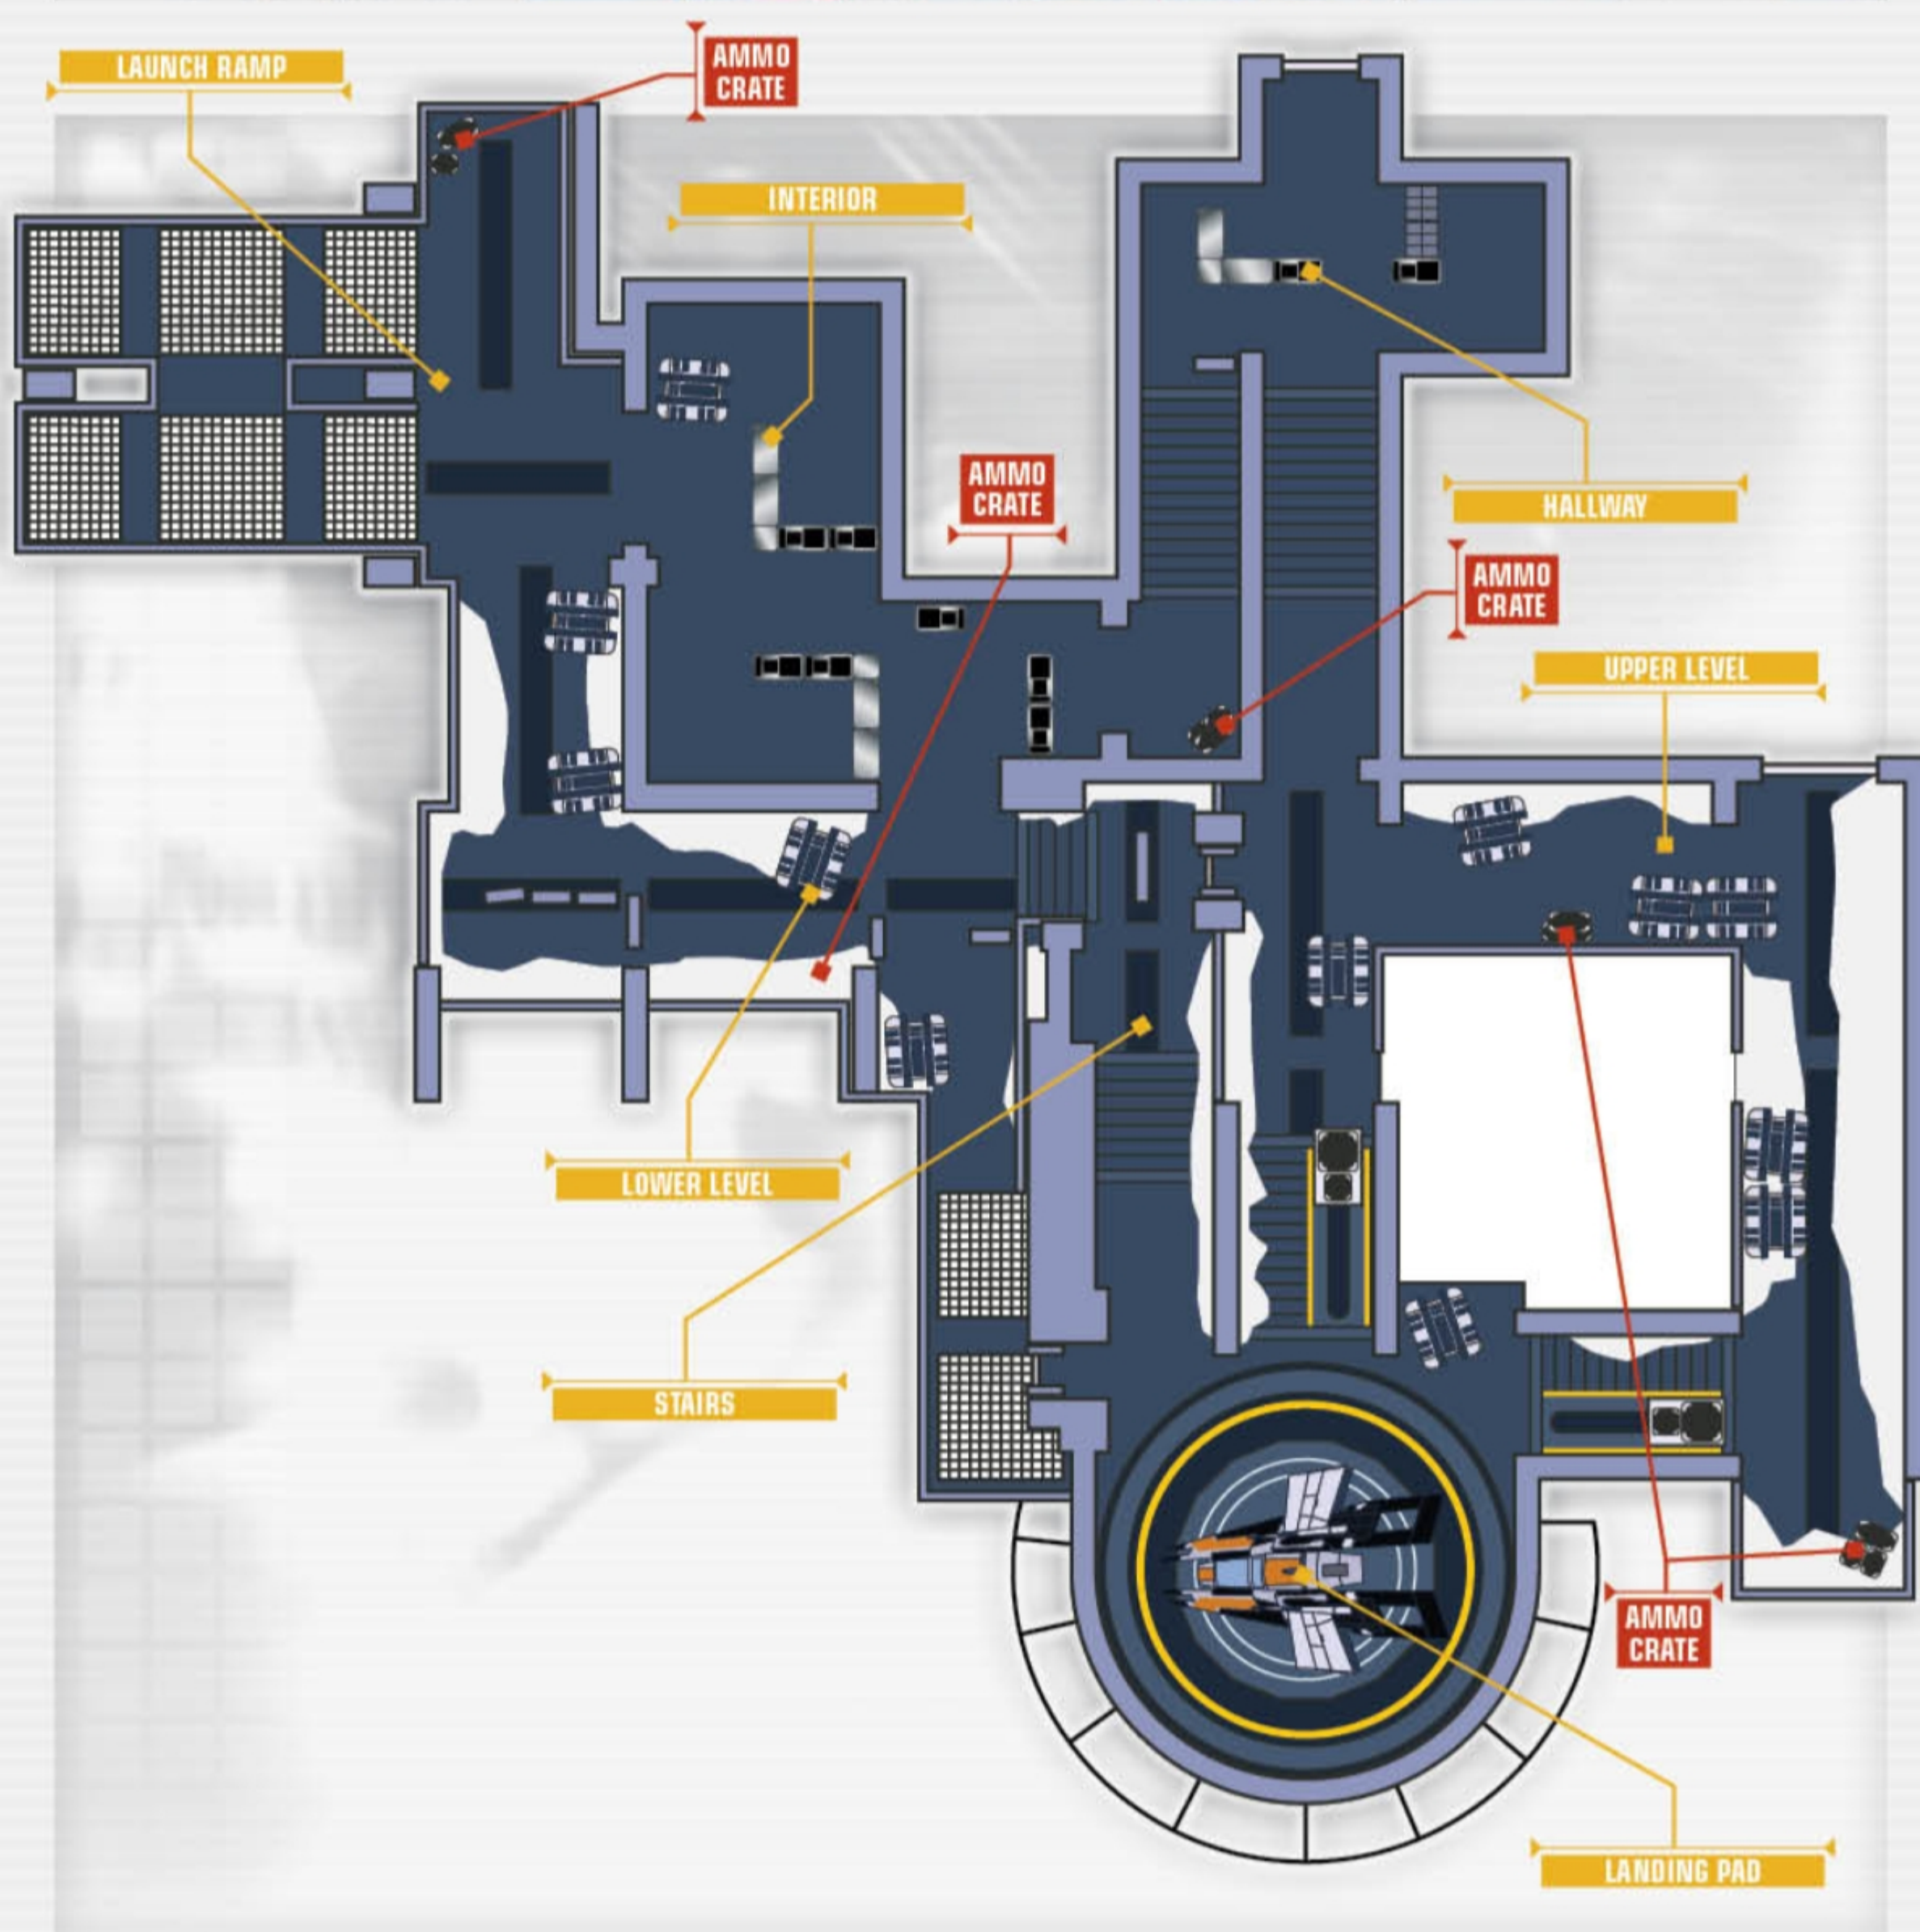

Also called "Broadway" by some of the testers at BioWare, Main Street is similar to the Landing Pad in that the central location is at a lower elevation to everything surrounding it. However, it is worse off because the differences in height are much greater. Couple this with multiple infiltration routes from structures surrounding the area and you've got a tactical nightmare waiting to unfold. Your best bet is to stick to the buildings and walkways across from the Central Pod. You'll have easier access to ammo from the box located at the Landing Pad and cover from snipers, and a squad can manage the fewer paths of entry the enemies can take with greater ease. As with any of the structures on Ghost, your greatest danger is getting cut off inside any of the buildings by heavy units, like the Atlas. Try to prevent them from getting that close.

## LOCATION: WHITE

Located on a snowy world, White is very different from Ghost. While Ghost provides many opportunities for enemy troops to snipe from on high, the action here primarily flows through two distinct upper and lower ground levels. There are few locations that only the opposing forces can reach for a height advantage. Where White gets complicated is the indoor area, which takes up almost a third of the map and has few exits leading to the lower and upper outdoor levels. It is very possible to get completely cut off while inside the base, particularly on its upper floor. Much of White is designed to funnel both sides into choke points that can be easily flanked if players or the enemy are willing to follow a circuitous route through the base or through the outer areas. Smart squads can take advantage of this and stay perpetually on the move, running the course and killing on the go.

White has seven sections: Landing Pad, Upper Level, Hallway, Interior, Launch Ramp, Lower Level, and Stairs.

## LANDING PAD

Unlike the Landing Pad in Ghost, this one is considerably easier to defend. A Cerberus fighter occupies the center of the pad, giving players an opportunity to use it as cover. In addition, there are small blast shields located near the fighter, allowing players to shift between locations to take cover from incoming fire from the catwalks. No ammo crates are on the circular Landing Pad, with the closest being a pair located on the catwalks in front of it. The nearest of the two has little in the way of useful cover from assaults on the same level, so trips up to it during the extraction phase are not recommended. While this Landing Pad is defensible, supply problems might move players to the Upper Level walkway, in hopes of funneling the enemy through the narrow paths. There is a side ladder that allows for flanking from the Lower Level, so keep an eye out for that.

## UPPER LEVEL

The Upper Level consists of the catwalks that provide overwatch onto the Landing Pad and lead into the base interior. Two ammo crates are located here, providing ample supplies for squads defending this location. This is arguably one of the best places to make a stand while waiting for the shuttle during extraction, as the enemy has little room to maneuver and will be sustaining fire the moment they enter the catwalk from the base interior or from any of the lower-level areas. Of course, this confined space leaves you with little room to maneuver as well. Against later waves and on later difficulties, it's not feasible to camp in the Upper Level unless you are bringing solid firepower *and* your squad is well coordinated.

## HALLWAY

Hallway is a bit of a misnomer. It is the upper floor of the base that is accessible via the Upper Level catwalks and the stairs leading into the lower-floor Interior. Hallway is incredibly cramped, with lots of small pieces of cover to use. Dislodging a determined foe here can be difficult, while defending the place as a squad can be taxing. With only the stairs down to the Interior and the passageway leading to the Upper Level the only routes in or out, it is possible to lose an entire squad here simply because you have no safe place to hide while a Reaper Banshee or Cerberus Phantom runs amok. Worse still, the closest ammo crates are either at the bottom of the stairs leading to the Interior or on the catwalk on the Upper Level outside the base. If you intend to hold here or have an objective in this area, anyone with Proximity Mines should lay them in the corridors. Any area-of-effect abilities work great in those tight spaces. Daring Vanguard's can use Biotic Charge in tandem with other Biotics like Reave or Pull to set off combo blasts for heavy damage. It's still a better idea to reach the lower Interior for better room to maneuver or the Upper Level.

## INTERIOR

The Interior acts as a hub area between the Hallway, the Lower Level, the Stairs, and the Launch Ramp. Despite the many possible entryways, the Interior can make a solid temporary fallback position for vigilant squads on the lookout for flanking maneuvers, especially while on the way to an objective at the Launch Ramp section. The room's size makes it somewhat safe to fire Cobra missiles at large groups of enemies, should the need arise.

## LAUNCH RAMP

An H-shaped set of catwalks that lead directly into the Interior and Lower Level sections of the map, Launch Ramp makes for a generally unpleasant place to fight. Cover is limited, and while there are few places for the enemy to assault you from, getting hemmed in here leads to similar problems with the Hallway, except that there are fewer obstacles to slow down really dangerous melee units such as the Phantom or the Reaper Brute. Defending Hacking objectives at the Launch Ramp can get frantic.

## LOWER LEVEL

One of the larger portions of the map, the Lower Level is a big walkway that extends away from the Launch Ramp. It has two access points leading into the Interior: one to the Stairs and another smaller side route that takes you to a ladder leading to the Landing Pad. Consistent with the almost circular nature of White, the Lower Level is assailable from multiple directions. Cerberus forces in particular like to use the Interior as a way to circle around behind players who are facing off against other units at the stairs. You're at a serious disadvantage on the lower level, with enemy forces enjoying two separate levels of terrain advantage from the Stairs and from the Upper Level catwalks.

## STAIRS

The Stairs make a good place to hold if you also have cover from squadmates on the Upper Level and the enemy is streaming in from the Interior or the Lower Level. Cover is limited for people on the Stairs but adequate. Enemies can flank from the Lower Level ladder access to the Landing Pad—watch out for that. Also be aware that enemies can literally drop in behind players on the Stairs from the Upper Level catwalks after passing through the Hallway. This section is the smallest of the entire map, but it can be very important for bogging down enemy assaults, particularly if the squad is trying to hold the enemy away from the Landing Pad for as long as possible before sprinting to the extraction zone.

## LOCATION: DAGGER

Dagger is a major communications array set out in the middle of a desert. It is one of the larger maps in the online multiplayer. The command room of the comms facility is connected to a series of walkways that surround a central clearing, with light cover scattered through it. A lot of sniping can be done on this map for both sides, thanks to the long, unbroken sightlines across the map center toward other parts of the facility. Players who take positions inside the main buildings can strike targets located just about anywhere on the map from the windows, while the structure's narrowness helps pack attackers into nice groups for sustained fire. Dagger's sheer size compared to other maps allows players to hold on to positions for a little longer while enemy reinforcements make their way over to the action.

Dagger has seven sections: Array Control, Comm Tower, Dark Side, East Approach, Outlook, Pipeworks, and West Approach.

## ARRAY CONTROL

The interior of Dagger's central structure and the highest point on the map, Array Control is a small circular room attached to a hallway. From this section, there are passages that lead directly to the East and West Approaches and to the Dark Side (the player's starting point). Because of its height on the map, Array Control has windows that allow for excellent overwatch positions that snipers can use to strike targets in the lower portions of the map. Its cramped space also makes for an excellent choke point for both players and hostiles. During extraction, the Dark Side-Array Control entrance can be locked down by two players making intelligent use of Techs and Biotics. This leaves the rest of the team a chance to concentrate on threats approaching from the lower areas of Dark Side, in particular the rampway entrances from Pipeworks.

## COMM TOWER

The Comm Tower connects the West Approach to the Pipeworks. Its central antennae and the surrounding walkway offer little in the way of protection; being sandwiched between a pair of high-traffic zones is only one danger you'll face while here. You'll also be dealing with any ranged threats from Array Control, making the Cerberus Nemesis a serious threat to any objectives you need to accomplish here. Fortunately, Comm Tower's location does give it easy access to an ammo crate in the West Approach, so during Hacking objectives here, resupply isn't as big of an issue...unless the enemy is currently pushing through the West Approach.

## DARK SIDE

Dark Side is the deployment area and the extraction zone. It is connected to Array Control and includes ramp access to the Pipeworks. The location where players begin is easy to properly defend during extraction. Enemies traveling through Array Control, from either the West or East Approaches, must contend with the cramped rooms, forcing them close together to be blasted with your powerful area-of-effect abilities. If they attempt to use the windows for sniping, players defending the Dark Side LZ can countersnipe just as easily. If the enemy approaches from the ramps leading to the lower portion of Dark Side, players can make the short trips up the ramps unsurvivable. Dark Side's primary tactical disadvantage is that it is darker than the rest of the map due to the communications array's shadow. Cloaked units, like the Geth Hunter and the Cerberus Phantom, can be harder to spot if the fighting is particularly fierce.

## EAST APPROACH

While not as defensible as the West Approach, the East Approach still allows for good sightlines on almost the entirety of the Pipeworks while also having solid cover from anything attempting to snipe from Array Control. Array Control can also be accessed from the East Approach via a ramp and a ladder, both of which can be easily locked down while also providing users with little protection. Many hostiles attacking from Array Control like to use the ladder, as it provides the fastest access to the East Approach; however, upon dropping down, they have little in the way of immediate hard cover, a very punishable error for anyone to make.

## OUTLOOK

The smallest section in Dagger, Outlook is the small elevated walkway leading out of Array Control and connecting to both the East Approach and the Dark Side. There is some measure of cover from ranged threats located in the East Approach and the Pipeworks, but otherwise the walkway is almost completely exposed to flanking from the easternmost walkways found in Dark Side.

## PIPEWORKS

The ground floor of Dagger, Pipeworks is directly connected in some way to every single section of the map, save for Array Control. Consequently, this means that anyone located in the Pipeworks can potentially be flanked from almost every direction, and the height advantage from some of those areas negates much of the waist-high cover scattered throughout Pipeworks. However, you can use the base of the Array Control building as a safe haven to rest and recharge for a few precious seconds, forcing enemies to traverse the Pipeworks or take the ladder from the West Approach to try and flank. One good thing about the Pipeworks is that its size allows players to pick off melee and short-range units at a safe distance, or they can flee to safety if enemies do manage to get too close.

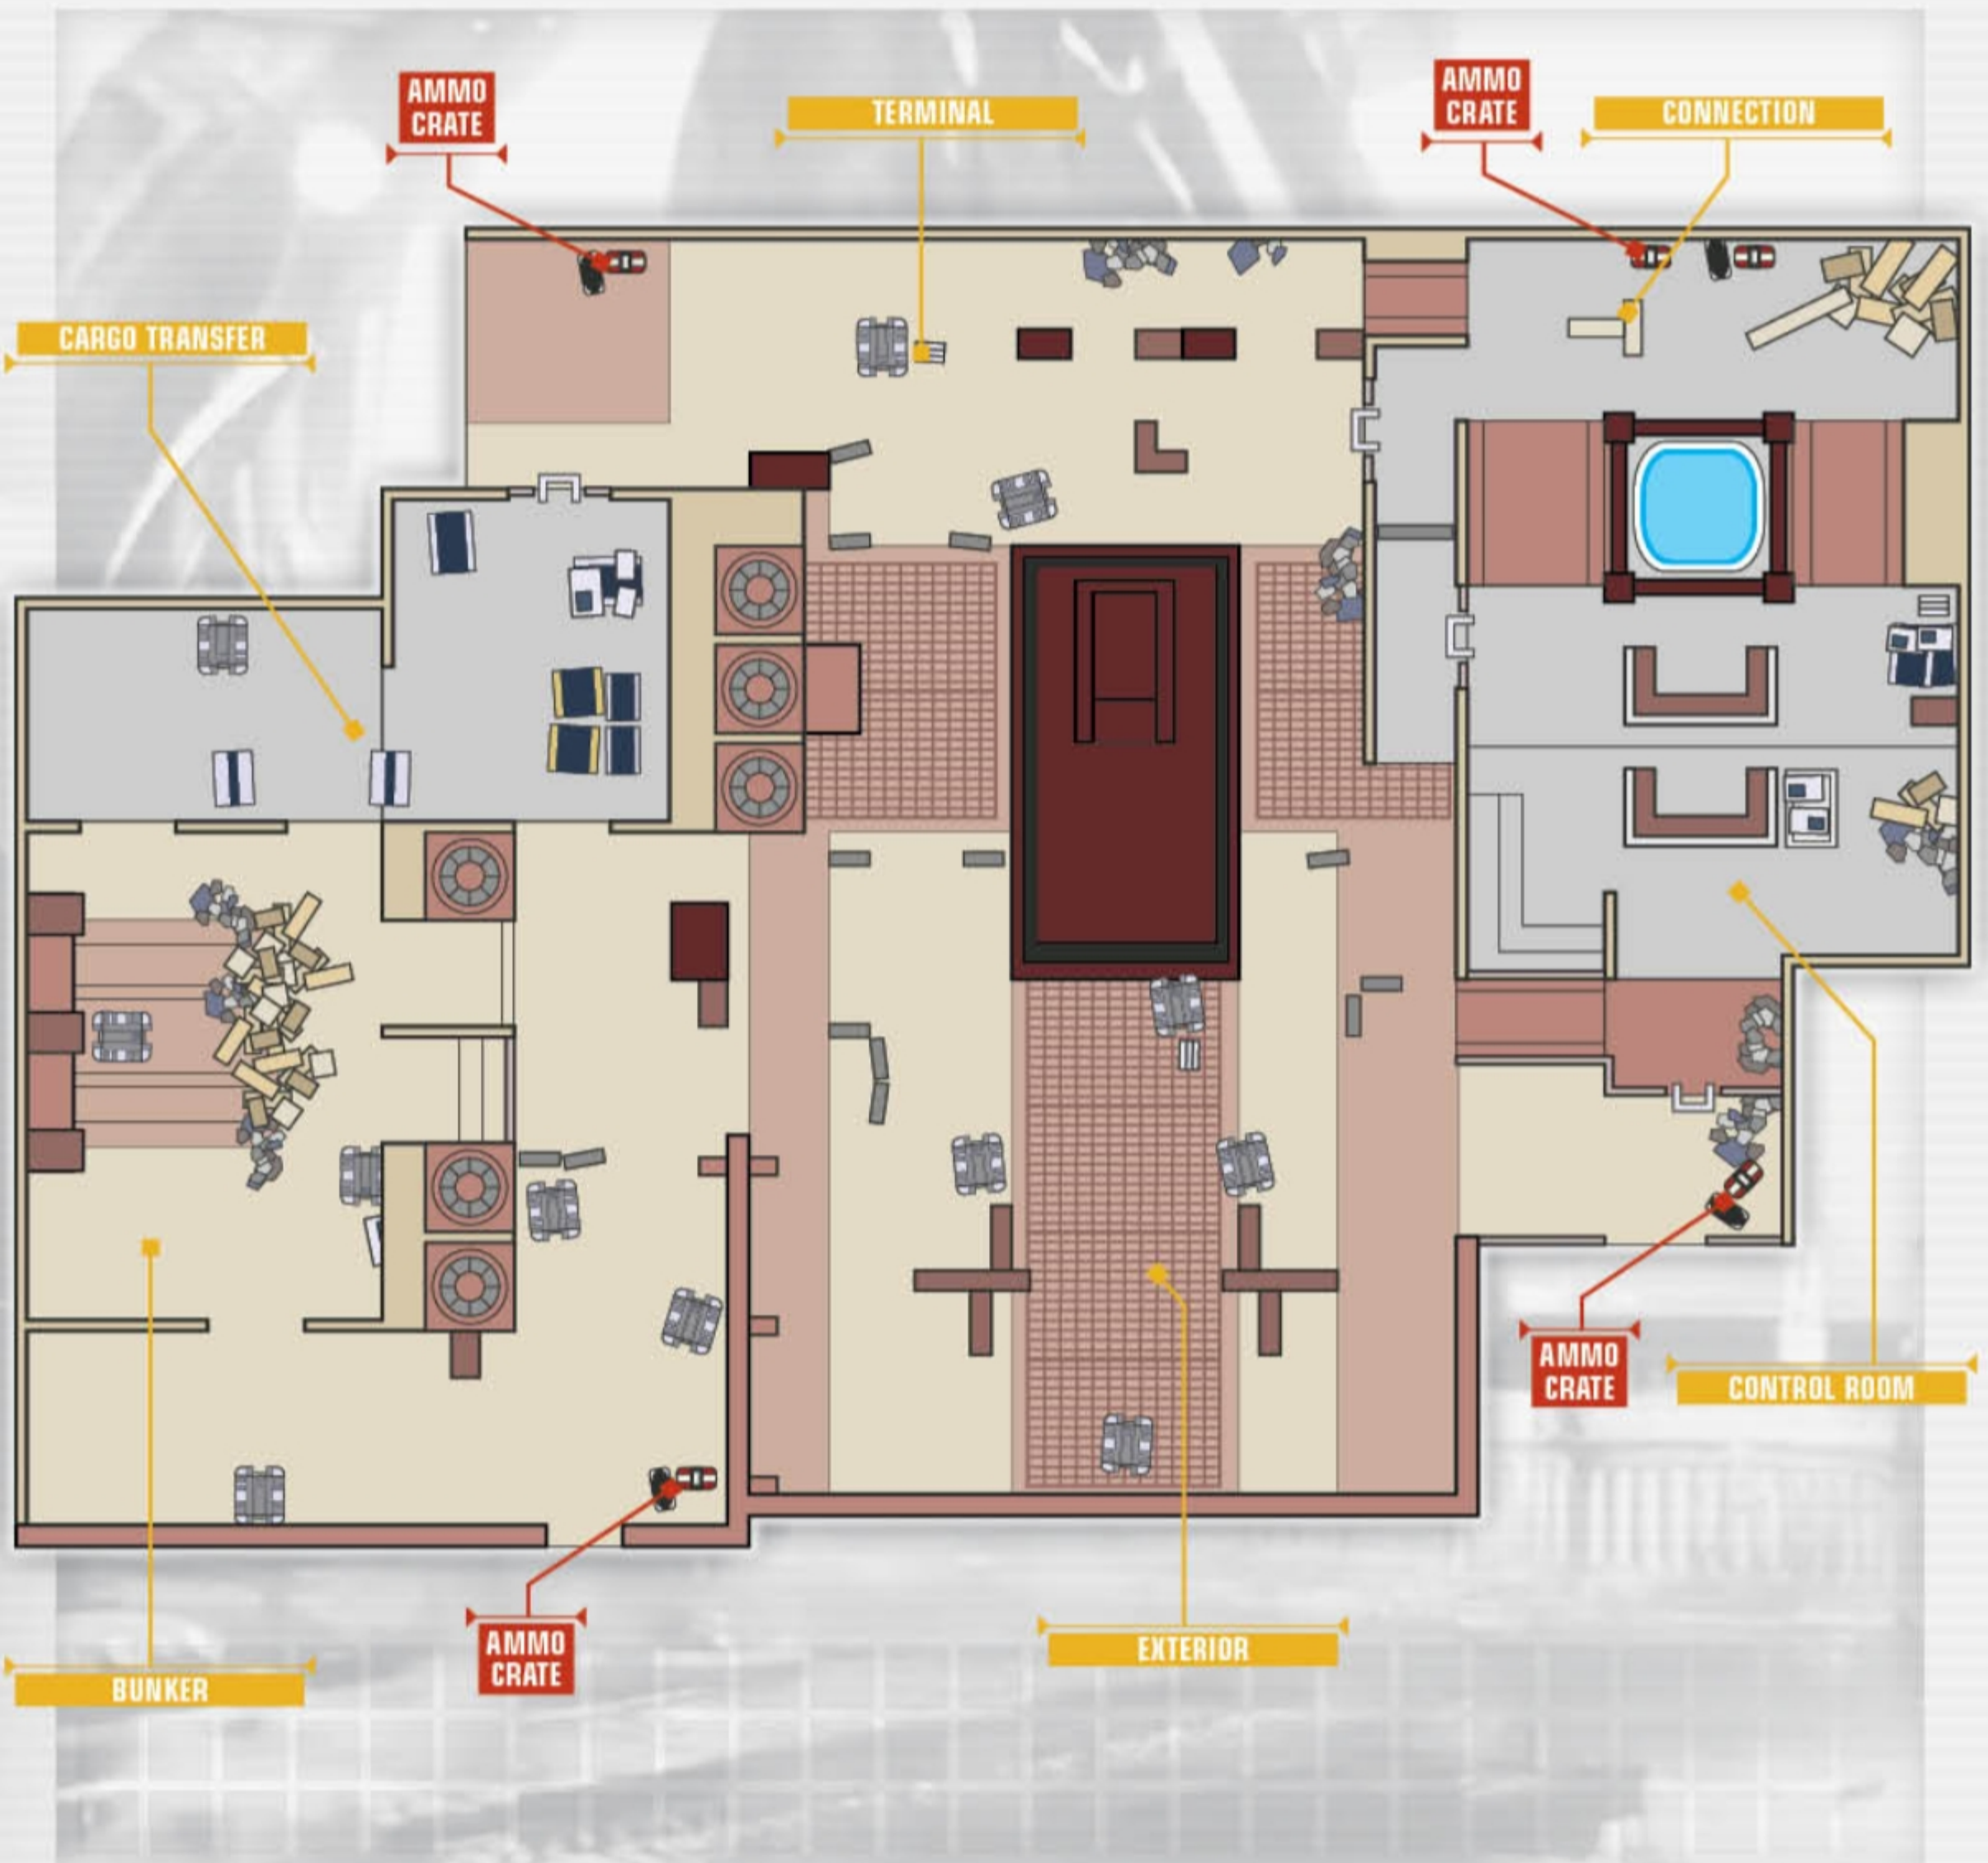

## WEST APPROACH

Unlike the East Approach, the West Approach enjoys good cover from any snipers located in Array Control while retaining a positional advantage over the Pipeworks and the Comm Array. A ladder allows easy access to the Pipeworks, dropping players into another well-protected location underneath Array Control. A four-player squad can halt any hostile assaults through the single Array Control entrance ramp. Another good tactic is to set Proximity Mines along the walkway, specifically on any pieces of cover facing Array Control, to further stymie your foes.

## LOCATION: GIANT

Located on the krogan homeworld of Tuchanka, Giant is another large map. Unlike Dagger, Giant is much less conducive to long-ranged sniping. The terrain here is complex, filled with enough cover and flanking routes that even the more open areas can be daunting to hold down during objective modes. Complicating things are the series of superguns that fire at regular intervals over the course of combat. The sound can drown out other more important things you don't want to miss, such as the approach of any hostiles. This level has an abundance of sniping positions that only the enemy can reach, which can lead to some serious headaches when fighting the jump-jet-equipped Cerberus here.

Giant has six sections: Bunker, Cargo Transfer, Connection, Control Room, Exterior, Terminal

## BUNKER

All missions on Giant begin just outside of the Bunker in the sprawling Exterior zone, and they all end in the same location. The Bunker is dilapidated, its roof partially collapsed inward. This makes the Bunker interior U-shaped and divides the two Cargo Transfer access points from each other. While this is a somewhat solid defensive position, remember that the two exits leading to the Exterior will be the first places the enemy will go if the Cargo Transfer entrances are not accessible. Likewise, players should remember this if an objective is located in the room but enemy presence is heavy.

## CARGO TRANSFER

The Cargo Transfer is a small connecting corridor between Terminal, Exterior, and Bunker. Maneuvering room is limited thanks to large shipping containers strewn throughout a part of this section. Cargo Transfer is one of two small transitional areas on the map, but it occupies a certain amount of importance tactically. You can use the ladder leading to the Terminal from this hallway to tangle up the flow of enemy reinforcements from Cargo. Enterprising Engineers can also lay a Sentry Turret at the top of the ladder, giving it a great field of fire over a wide swath of the Terminal section.

## CONNECTION

The other small-sized hubway of Giant, Connection feeds into the Control Room and the Terminal. There is a small amount of cover in the main room of this section and a convenient ammunition supply that can be useful for any objectives that require a team to settle in for a fight. However, this room's small size can lead to some hairy moments when the more vicious short-range units inevitably chase the team down for some close-quarters combat. A much smaller side passage is also part of Connection, allowing ladder access into the Control Room.

## CONTROL ROOM

Two U-shaped control consoles are the centerpieces of the Control Room. With three entrances feeding in from Connection and one leading to Exterior, there is the potential of being overwhelmed if the enemy does take all three entryways from Connection. Solo players can find it hard to manage that. Harder still, spare ammo is not located within this room, so if your stay here is to be fairly lengthy, try to arrive stocked up first.

## EXTERIOR

The Exterior of Giant is the largest section of the map. Cargo containers and dividing walls litter this arena, making for tense games of hide-and-seek between players and hostiles alike; you can beat one ambush, only to round a piece of cover in the wrong direction and land face-first into another. Splitting the map in half is a large set of piping suspended in midair by a set of support struts. It is from here that enemy reinforcements run onto the map. Cerberus forces can freely jump to the top of this pipe to evade players and to take up sniping positions. From the Exterior, players can access every other section on the map, with the largest access being a pair of large ramps that feed directly into the Terminal area. There's decent cover on the ramp, and the elevated position makes taking out threats inside the Terminal a little easier.

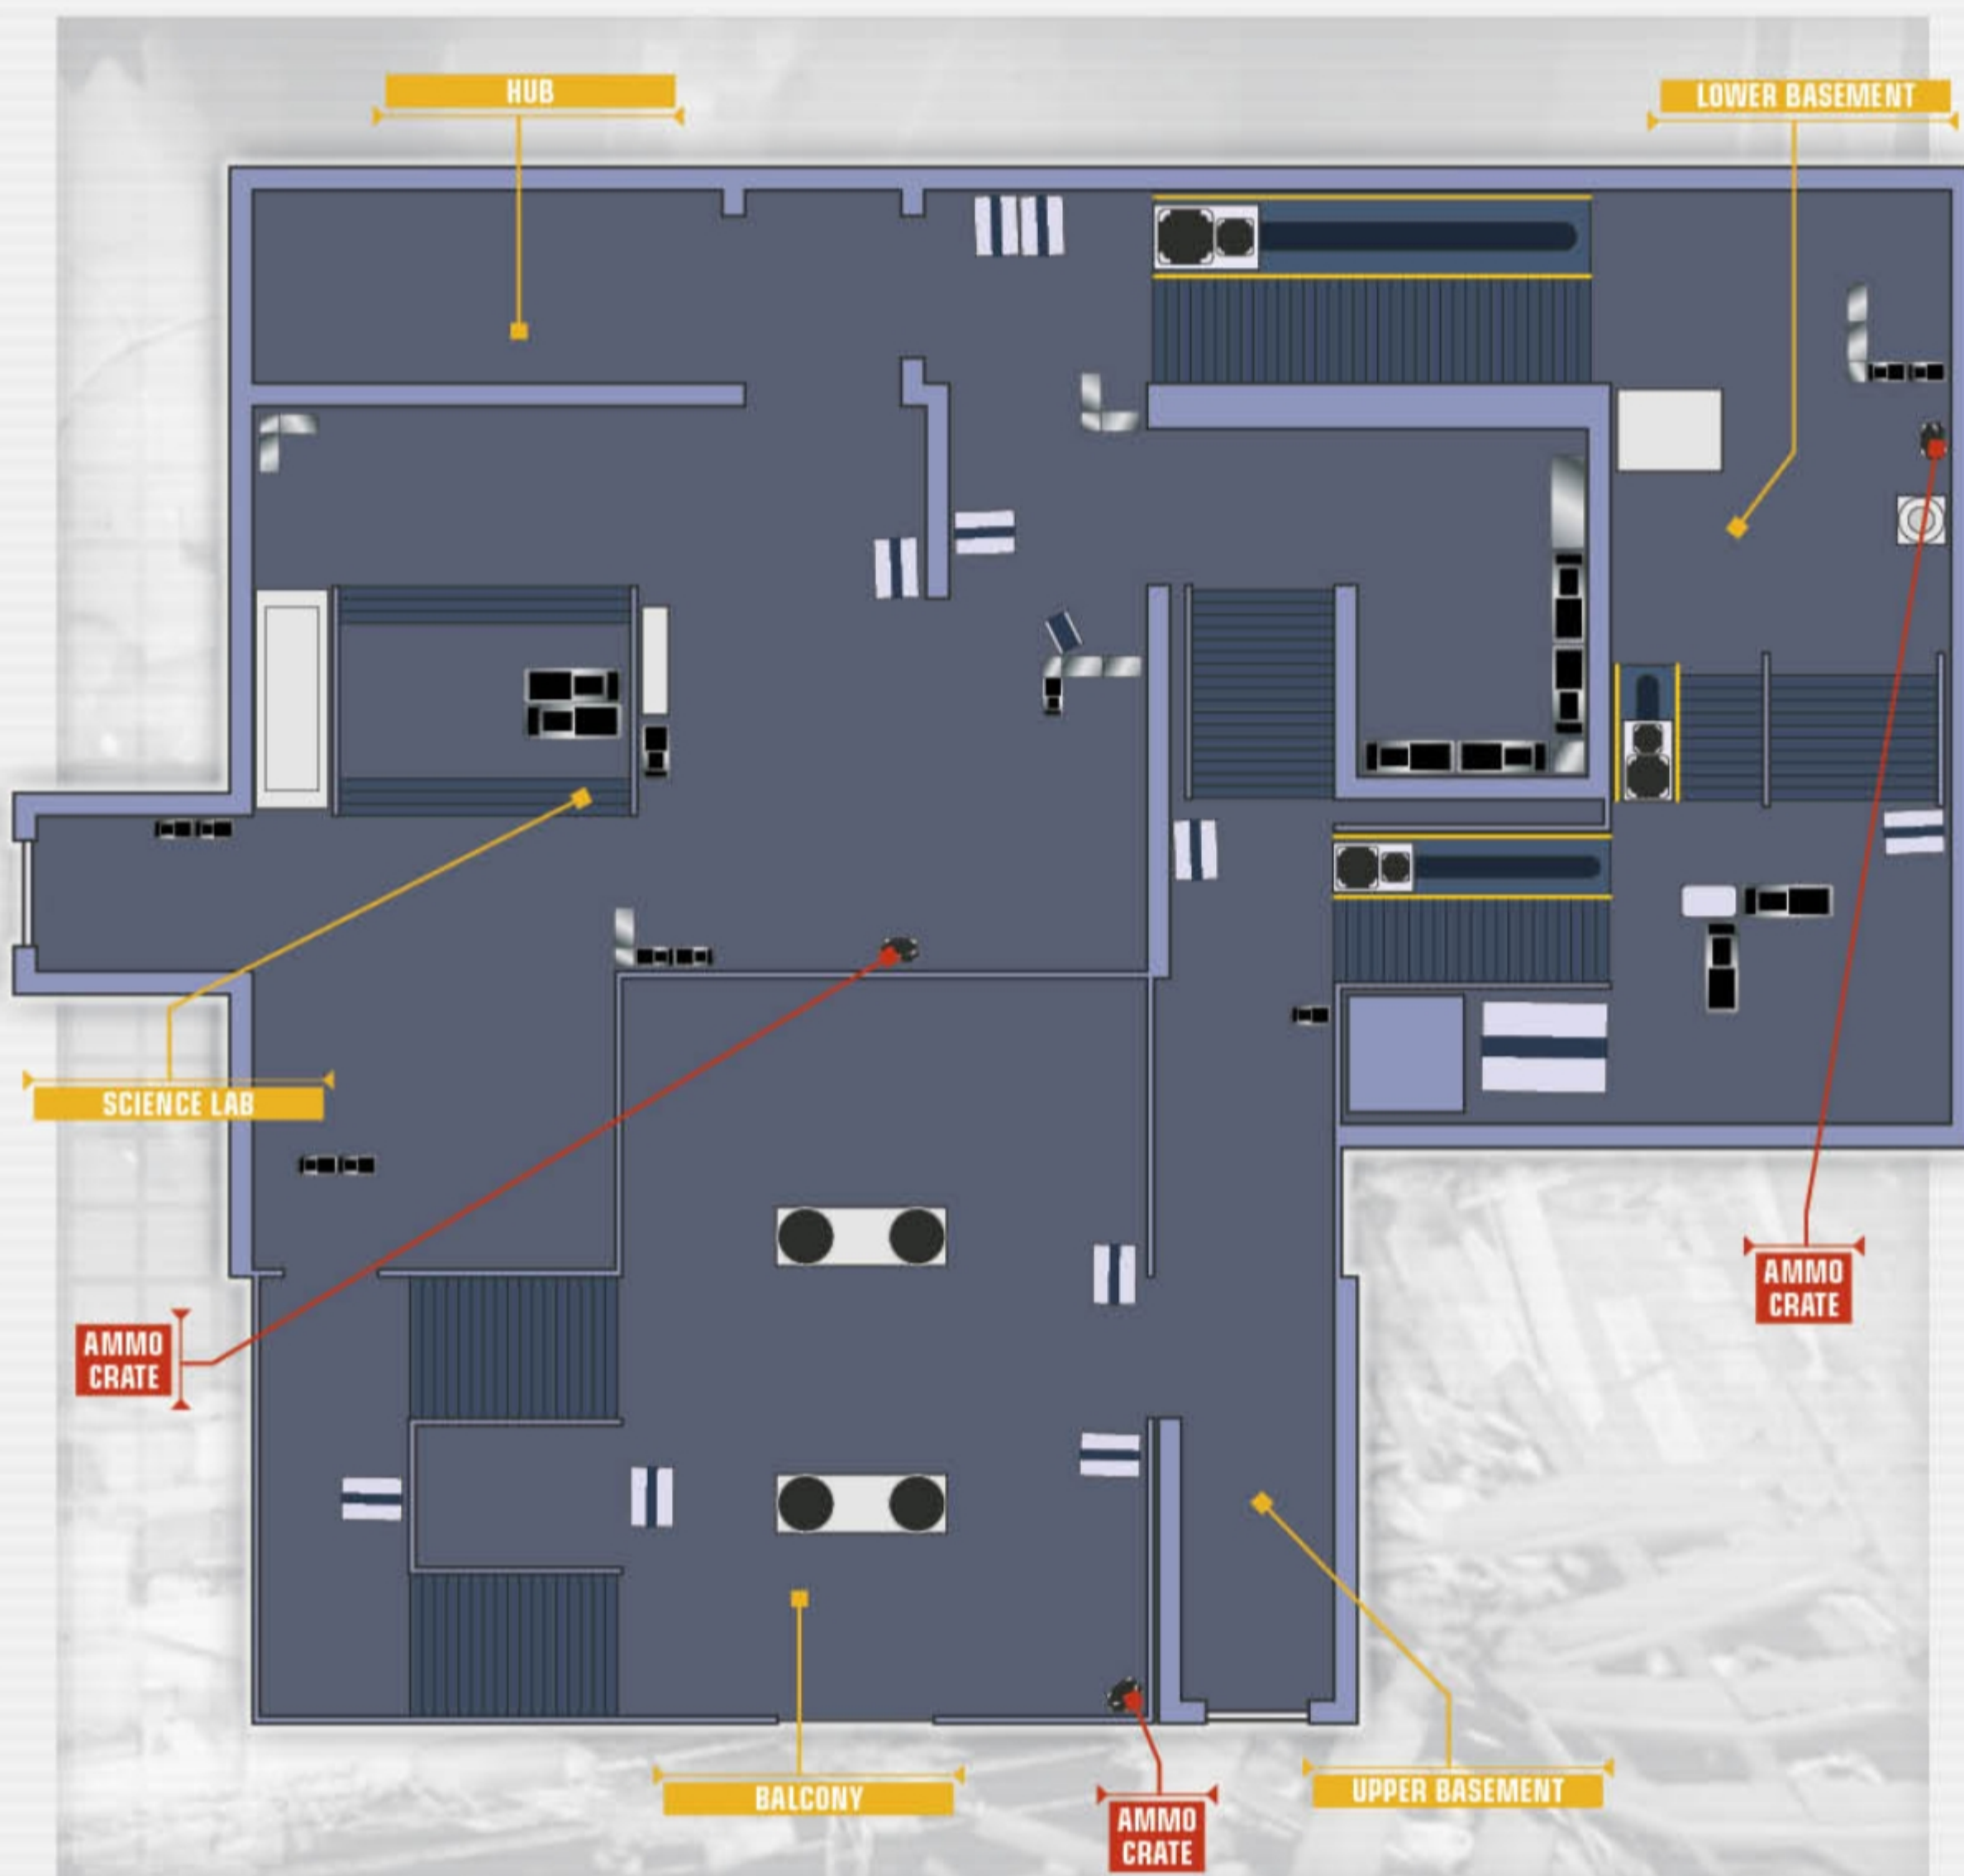

## TERMINAL

The second largest piece of real estate in Giant, the Terminal suffers from having two comparatively massive entryways. This allows large rushes of enemies to approach a player squad attempting to accomplish objectives such as Hacking. On higher difficulties, this can feel nearly insurmountable, forcing players to desperately fall back from positions closest to the ramps. The ramps give hostiles from the Exterior the positional advantage and allows them to move in and spread out enough that they can avoid wide area-of-effect abilities. Terminal is cluttered with various cargo containers and support struts that can be used for cover, but as it is with the Exterior, this can lead to players rounding certain corners directly into unpleasant surprises. Engineers can help cover the flanks by setting up turrets or combat drones to harass the enemy as they pass through open spaces, particularly the areas that feed into Connection and Cargo Transfer.

# LOCATION: GLACIER

Researchers in this Cerberus facility once conducted dangerous experiments in which they applied Reaper technology on its people. Now abandoned, the small facility is the background to vicious struggles. Glacier is the smallest map of the game, and it shows the moment the action starts. Enemy spawn points are all located relatively close to each other, meaning that there is often little delay once a wave begins, as contact is almost always immediate. On higher difficulties, players must be capable of killing quickly to offset just how close the enemy often starts. Later waves against any of the three opposing forces are especially dangerous, because it is very possible to have heavy units like the Atlas or the Banshee start close to the squad.

Glacier has five sections: Balcony, Hub, Lower Basement, Science Lab, Upper Basement

## BALCONY

Acting as the starting area and extraction point, the Balcony connects to the Lower Basement and the Science Lab. With its windows on a higher elevation, the Science Lab has good sniping posts overlooking the lower portion of the Balcony (if you've got the firepower to break through the glass), but there's enough cover on the Balcony to negate that particular advantage. The Lower Basement entrance can be problematic to defend, as it is large enough to allow an Atlas easy passage through it while still allowing other troops to slip around it. If enemy reinforcements are arriving at the Balcony, try to use the stairs leading to the Science Lab for the height advantage, but be mindful of the lack of available cover when doing so.

## HUB

Hub is a connecting area between the Upper and Lower Basements and the Science Lab. It is not a particularly safe location to be tied to, as you could be surrounded entirely by enemy spawns. This, of course, means that Hacking and Enable/Disable Devices objectives can and do appear here. Players can use some of the control panels for cover in the corner of Hub near the windows overlooking the Balcony but should be prepared to move to the Science Lab if things start getting tense.

## LOWER BASEMENT

This section of Glacier has a decent amount of cover spread throughout the three "levels" it is divided into. It is possible to get cornered here if the enemy is able to put together a two-pronged assault from the stairways leading to the Hub and the Balcony. Fortunately, there's plenty of cover to allow players a chance to move from one safe spot to the next while neutralizing threats. This, of course, works for the enemy, so be mindful of your advances. The darker parts of the Lower Basement, combined with some of the colors of the facility, make it easy to overlook cloaked enemies like the Hunter or the Phantom if a player is in a hurry, so keep your eyes open during later waves of Cerberus or geth.

## SCIENCE LAB

The Science Lab contains mostly flat surfaces, combined with pieces of lab equipment strewn about. These work together to make the Science Lab the stage for some of the more intense firefights possible in all of Glacier, particularly against the cover-happy Cerberus troops. There is not a lot of ground between pieces of cover, and just about any spot in the room allows players and enemies alike to see anyone else in the room, which makes moving during shoot-outs dangerous. If a Hacking objective is being held here, Sentry Turrets facing the Hub-side and Balcony entrances can help soften up attackers.

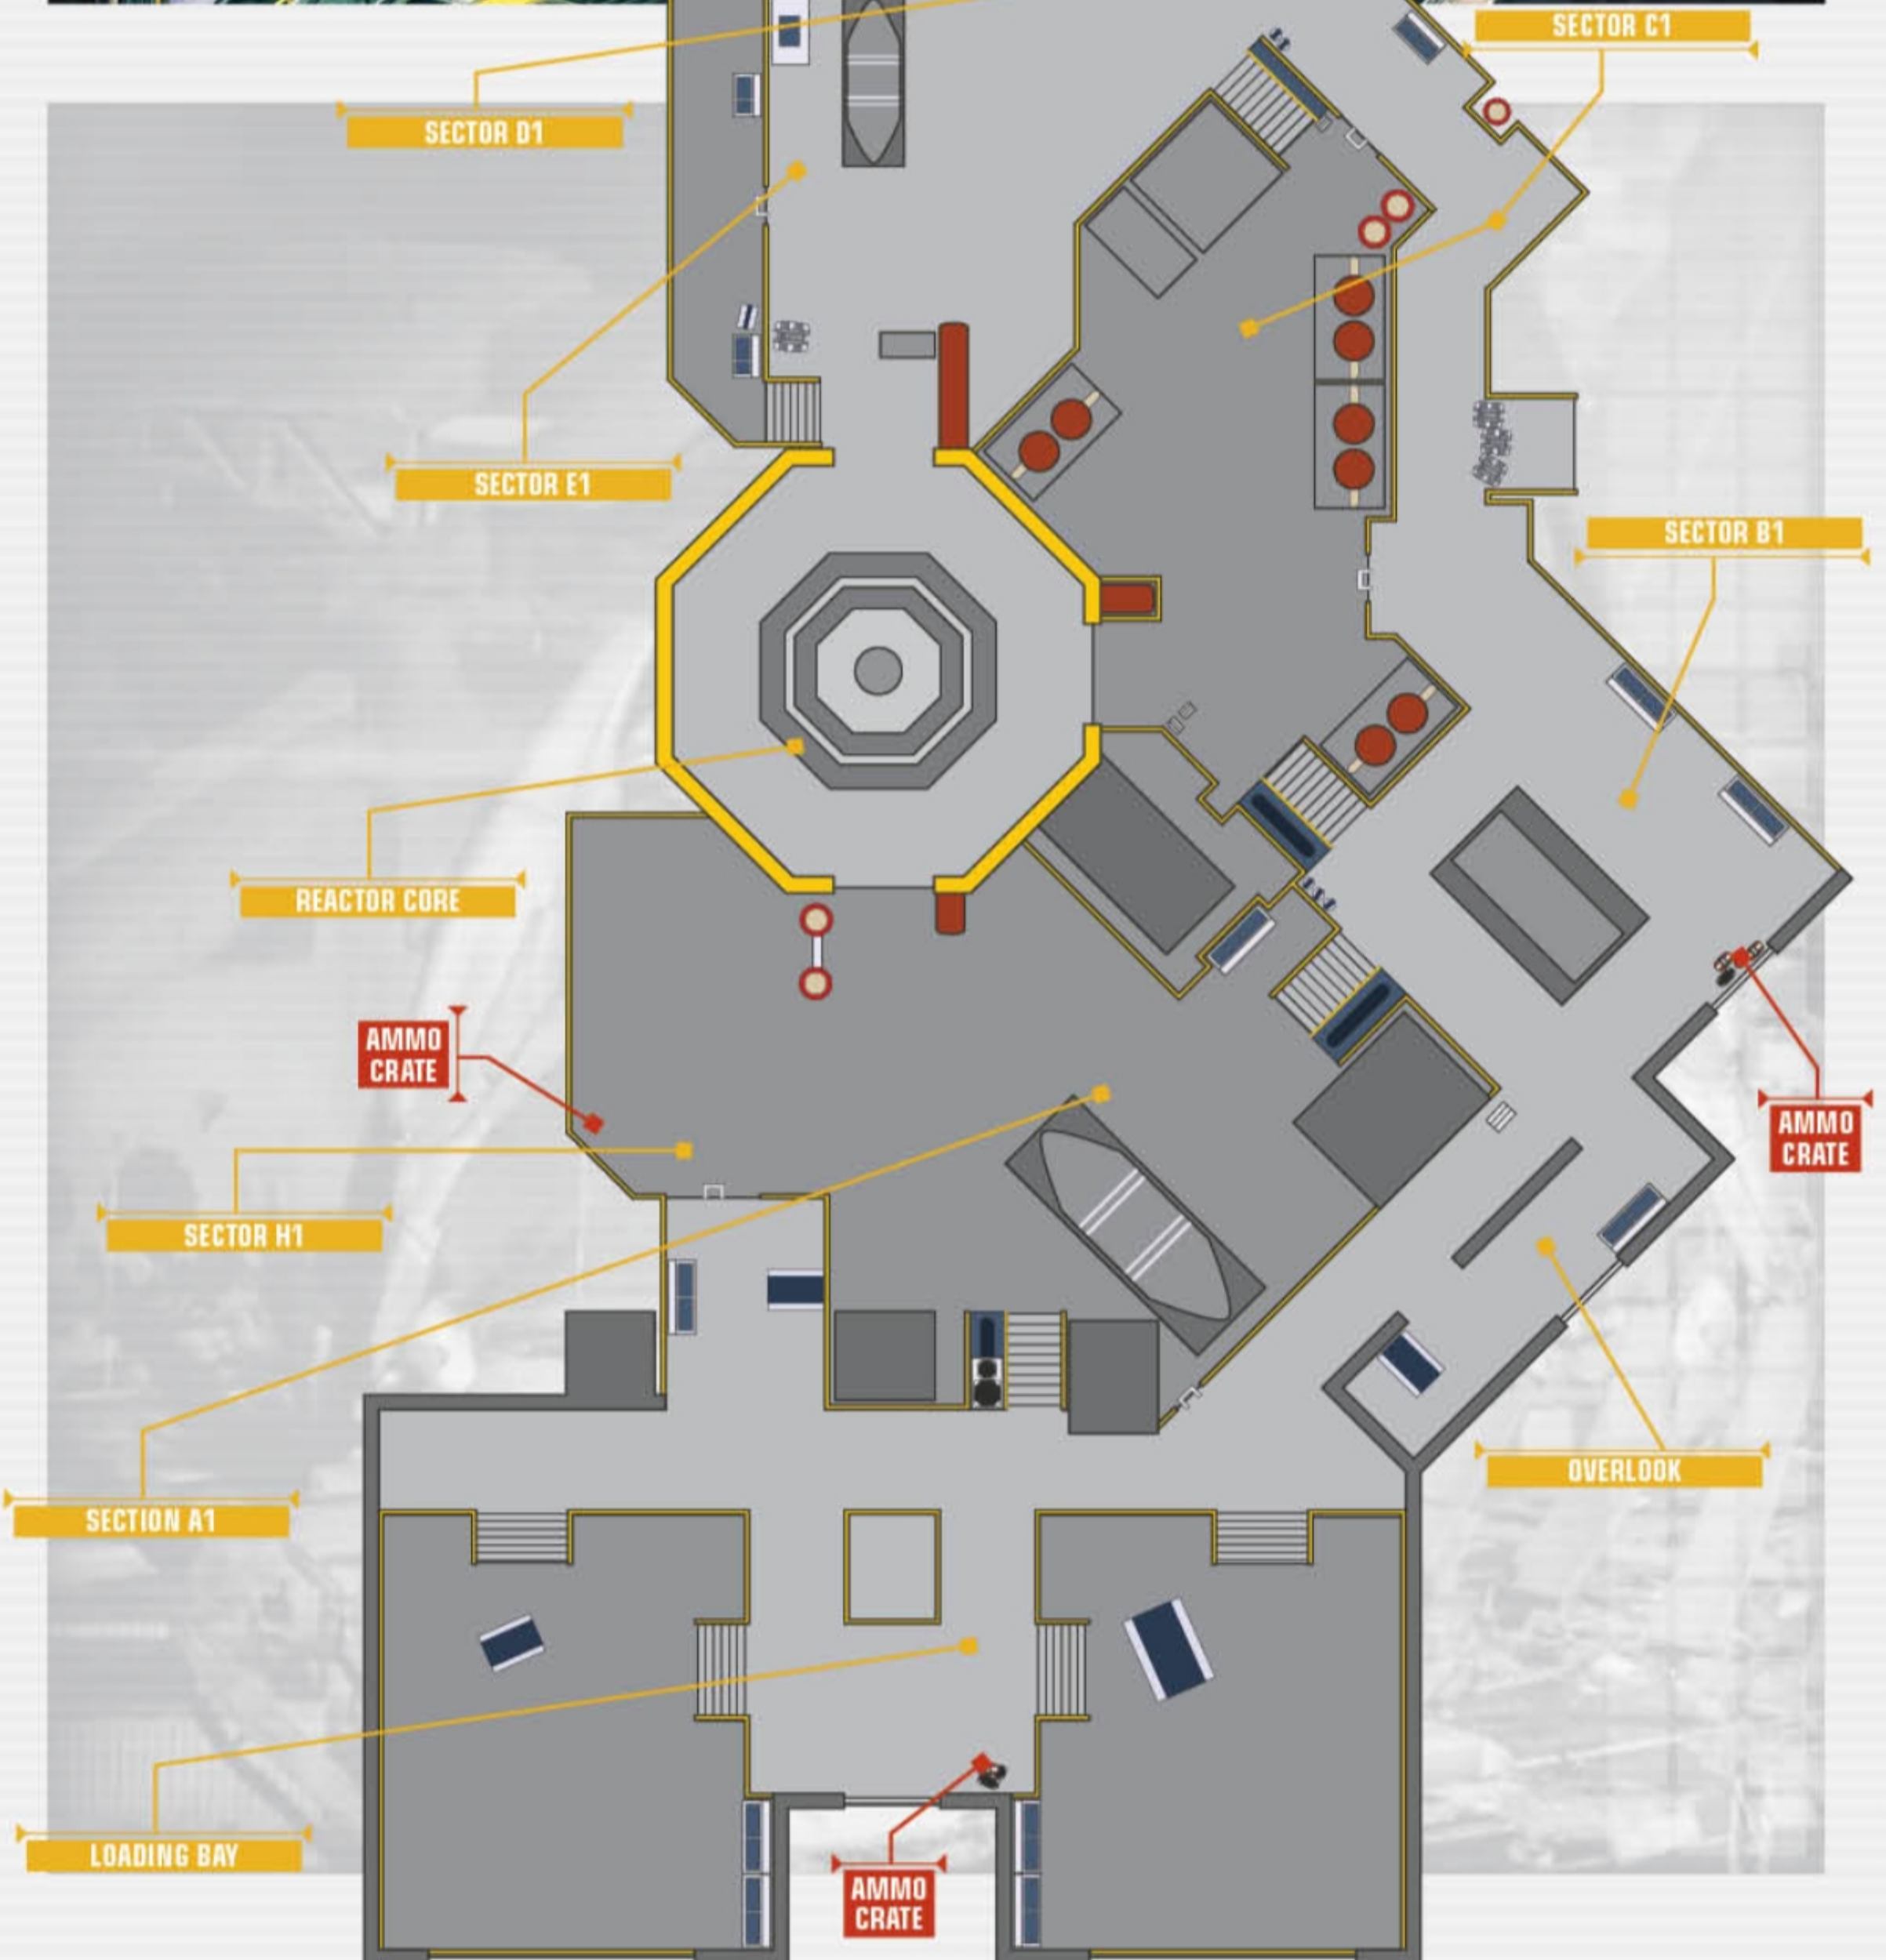

## UPPER BASEMENT

Even smaller than the Hub next to it, the Upper Basement consists primarily of a small office that overlooks the Lower Basement. Despite its height, the Upper Basement provides no real sniping advantage for either side during battle. It isn't recommended that players stay in that small room unless an objective is involved or unless they need a breather to recharge their shields before moving on. On higher difficulties and in later waves, getting stuck in there almost constitutes a death sentence. The Upper Basement also includes a stairwell that leads to the Lower Basement and the Balcony.

## LOCATION: REACTOR

Circular in nature, Reactor can be a tough place to fight in, particularly on higher difficulties. This arena consists of heavy cover and winding walkways, so players must remain wary of being blindsided by hostiles in cover on their flanks. This fairly dark map gives cloaked units an edge for sneaking up on players. Reactor is also home to arguably one of the hardest Hacking locations in the game—the central Reactor Core section—particularly on Gold difficulty. Staying mobile is definitely encouraged. The circular design allows a four-man squad to divide up into pairs, allowing one team to ambush the enemy's rear flank. Of course, they are capable of doing the same. Paradoxically, despite the sheer number of things that can be used as cover, the map design encourages players to work as a team and remain on the move for as much as possible in order to stay ahead of enemy reinforcements as they replace their dead.

Reactor has nine sections: Loading Bay; Overlook; Reactor Core; and six Reactor Sectors—A1, B1, C1, D1, E1, and H1.

## LOADING BAY

The center of the Loading Bay is where players start and where the extraction zone is located for Wave 11. Flanking this area are two depressions with a set of walkways lining them; these lead toward other Reactor Sectors on this upper level. The Loading Bay is surprisingly defensible, but its main problem is that the Reactor Sectors located nearby have large paths for access, meaning the enemy forces can quickly open up a broad front that becomes difficult for a fire team to manage. During extraction, it is almost better to start that final wave elsewhere and arrive during the last minute or so.

## OVERLOOK

Located directly next to the Loading Bay, Overlook can provide limited overwatch on the lower levels surrounding the Reactor Core. The upper levels of Reactor Sectors A1 and B1 meet near the Overlook. Hacking and Enable/Disable Devices objectives can potentially be placed here and by design can be a challenge to defend. The large wall seen in the screenshots also acts to cut off much of your peripheral vision of the other nearby areas should you be using it for cover; if you're working with squadmates, hopefully they will be keeping their eyes pointed to where yours aren't.

## REACTOR CORE

Acting as a hub that can take players and hostiles to different Reactor Sectors in relative safety, the Reactor Core facilitates flanking maneuvers via its three connecting tunnels to A1, C1, and E1. Its deficiencies become more readily apparent during Hacking mode. No matter where you take cover, you are vulnerable to incoming fire from the tunnel opposite to the one you're next to. Four-player squads should assign one player to each tunnel, with the fourth acting as a sort of sweeper who goes to where they are needed most. Even with this strategy, on higher difficulties, the increased resilience and aggressiveness of enemy troops may force players toward the sealed G1 door in an effort to focus firepower.

## REACTOR SECTOR A1

The Reactor Sector directly between the Core and the Loading Bay, A1 is one of the larger Sectors. Despite being lower than the Loading Bay, A1 is not particularly plagued by sniping positions. A group can conceivably deny hostiles the use of cover, forcing them to traverse the more open parts of A1. This sector is the first of three that connect directly to the Core.

## REACTOR SECTOR B1

B1 is on the raised catwalks connected to the Overlook, with ramps that lead closer to A1 and the Reactor Core and C1. The centerpieces of B1 are a pair of generators that are placed next to each other. Two players can actually set themselves back-to-back between the generators for protection, though on later difficulties, the heavier firepower being wielded by the enemy tends to penetrate the machines.

## REACTOR SECTOR C1

C1 is the second Reactor Sector to have a direct connection to the Reactor Core. The area just outside the access tunnel is sparse for cover and vulnerable to sniping from the catwalks that make up the other part of C1. Both levels of C1 are not particularly good locations for a firefight, as natural protection is so limited.

## REACTOR SECTOR D1

D1 is limited to the upper level of Reactor. C1's lower section flows up a ramp into D1, while C1's catwalks merge with D1's. Players and hostiles in the C1 Sector are at a disadvantage with anything set up in D1 due to superior defensive positions and a protected ammo crate that can be reached without exposing oneself to incoming fire for very long. Still, as with many of the other sectors, it lies between a pair of neighbors, and E1's Reactor Core access means that D1 is particularly vulnerable to being flanked from those locations.

## REACTOR SECTOR E1

E1 is not sandwiched between sections, so it is one of the better locations in Reactor in which to hole up. Any enemies who attack players located here must traverse the Reactor Core access tunnel or come from D1. E1 is better lit than other sections of Reactor, which can make picking out cloaked units much easier. There's ample places for a full squad to take cover without forcing each other into less-than-ideal spots. Better still, during the extraction wave, players at D1 and E1 can pull the bulk of the enemy force away from the Loading Bay, then use the E1 Reactor Core access tunnel to make a straight sprint for the LZ, if the enemy isn't occupying the Core.

## REACTOR SECTOR H1

H1 is a very, very small piece of real estate wedged between a series of fallen crates that block access to the F and G sectors and the A1 sector. This area is similar to E1 in that players here do not need to watch their backs, as there is an impassable wall there. Unlike E1, there is definitely not enough room to protect four players adequately. Still, it can be a good fallback position to use while waiting for the enemy to come to you. Sentry Turrets and Proximity Mines can make dislodging stubborn players a difficult task for the hostiles.

## SPECIAL THANKS

I'd like to thank my Lisa for being so supportive, understanding, and amazing while I lied to her face...sort of.

To my Lisa,

Little did you know that while I was toiling away writing this book, I was also cleverly planning my proposal. Little did you know that while I was flying to Edmonton to meet with the Mass Effect team, I was also flying to Kansas to meet with your parents and ask for your hand. Little did you know that while I was "emailing my contact" at the dinner table, I was actually texting your sister for help with the ring. Little did you know that while I was taking breaks from writing walkthrough text, I was writing clever little poems for the scavenger hunt that would lead you around Walt Disney World, and eventually, to the place where I would drop to one knee. I hope you said, "yes."

I love you,

– Nando

Many thanks to Bioware, particularly their QA team, but indeed the whole studio for being as accommodating as they were.

Many thanks to all of Prima, for giving me this opportunity to work on Mass Effect 3. To Paul, for all of the support and guidance, reigning me in when I needed it most. To Aaron, for the washing machine jokes. To Jesse, for freezing in Poland. To Don, for tolerating my use of the laptop for as long as I did. To Andy, for giving me this shot, and for bison ribs. To Fernando Bueno, for being awesome to work with and managing his growing apprentice's tendencies to be long-winded at writing anything (this is going to be edited, isn't it). To anyone I missed, I am sorry, you're thanked as well.

To Carrie, for her hard work on my submissions. To Targa, for making it all look awesome. To JJ, for the screen grabs and the scone.

Many thanks to them all, to all my friends, for all of the support. To my mother and father, long suffering have they been, my deepest thanks.

– Alex

## SPECIAL THANKS TO THE FOLLOWING BIOWARE AND EA EMPLOYEES:

Chris Bain	Michael Gamble	Scott Mitchell	Derek Watts
Benjamin Blanchard	Corey Gaspar	Barrett Rodych	Karin Weekes
Noel Borstad	Lorraine Honrada	Jim Stadelman	The ME3 Design Team
Chris Buzon	Casey Hudson	Bjorn Taylor	The ME3 QA Team
Darren Clark	Bryan Johnson	Ken Thain	The ME3 Writing Team
Nick Clifford	Arone Le Bray	Mike Trottier	
Eric Fagnan	Parrish Ley	Mac Walters	
Bastiaan Frank	Carlo Lynch	Preston Watamaniuk	

Prima Games would like to specifically thank Chris Bain, Nick Clifford, Michael Gamble, Casey Hudson, and Carlo Lynch. The amount of support we had from these guys was tremendous. Chris- You made sure we had whatever we needed to be successful (and he had to deal with Aaron). Nick- Your enthusiasm and willingness to help was refreshing. Michael- You were a brilliant conductor my friend. We shared more emails than most servers can handle and I appreciated all of them. Thank you so much for all your efforts. Carlo- Your commitment to helping us with accuracy will benefit the fans of this franchise. Casey- What a brilliant franchise you and your team have created. We're proud to have worked with you over the life of Mass Effect and look forward to meeting up again on whatever your next venture may be.

Thank you all!

# Cinematic Design

## Suspending Disbelief

The team on Mass Effect 3 understood that their primary job, especially with regards to narrative sequences, was to ensure the player's suspension of disbelief remains intact throughout the game. Any time a small glitch, bad camera cut, or rocky transition pulls the player out of the experience, the game has to gradually build that player up again to the point where they are fully engaged and invested in the fiction of the game.

With story moments comprised of multiple disparate parts, the cinematic design team's primary responsibility was to maintain this seamless flow of content and to be the guardians of this smooth narrative flow.

Seamless transitions between different types of content were incredibly difficult to pull off. But the team felt so strongly about the value of creating a smooth-flowing, seamless experience for the player, one that was not broken by cuts and fades to black, that they were driven to create new technology and processes to make these seamless transitions possible.

It is even evidenced from the level-to-level transitions, where the player is being moved from one environment to another (for example, barely escaping the Reaper invasion of Earth and then moving seamlessly into the Normandy's interior to take stock of the situation and plan for next steps) without the game having to stop to load. This creates a wonderfully free-flowing experience that feels great for the player and allows momentum to carry forward, heightening the intensity and drama of the game. For those instances where a load is necessary due to technical constraints, the loading process will be hidden behind a short contextual cinematic that again helps ground the player in their current environment.

BioWare's focus on developing cutting-edge story-driven game experiences has made them pioneers in many different areas—technology, process, development philosophy—and in some cases, they have to create entirely new disciplines.

When development of the original Mass Effect began in the early 2000s, the responsibility for creating the hybrid conversation sequences—which were, in effect, partly cinematic, partly interactive—fell on the shoulders of a tightly knit collaborative drawing from the design, art, technology, animation, and audio departments.

Over time, however, it became obvious that the unique nature of the interactive dialogue sequences that define so much of the Mass Effect experience depended on individuals with an unusual combination of skills, talent, and experience. Rather than simply rely on a cross-disciplinary team to take ad hoc responsibility for the sequences, BioWare created an entirely new role within the studio: the cinematic designer.

## Creating a Cinematic Moment

At the inception stage of a new cinematic moment, representatives from various teams and disciplines get together in what BioWare calls a "dog-pile." The dog-pile is typically comprised of a level designer, a writer, a cinematic designer, and a level artist. The macro story for the game will be broken down into components, with each component being assigned to an area of the game—a campaign, a level, and then several specific cinematic moments.

When the team zeroes in on a specific area of the story, a writer will present a narrative brief for that area, outlining any major plot elements that need to transpire within the sequence.

While the level designers begin to figure out the details of what the gameplay space needs to be, the cinematic designers begin breaking the content down into sequences of narrative, and outline where different pieces of story need to happen. They will map out important beats like character introductions and enemy entries and will identify where different narrative tools can be effective; for example, dialogue sequences, cinematics, and three-second cutscenes that showcase a memorable event and provide a punctuation point for the player's experience at that time.

In Mass Effect 1, the role of cinematic designer was new and relatively undefined. Production started on ME1 with two cinematic designers who had been technical designers previously and who were then assigned to support the writing of the game. To give a sense of how significant the process of cinematic design has become for BioWare's games, fast-forward five years. Mass Effect 3 now has a dozen cinematic designers responsible for creating over 300 scenes and facilitating digital acting for over 23,000 lines of dialogue. It would take a staggering 27 hours to play all this content, plus all the other ways in which the cinematic design team supports the game experience (from helping to create ambient moments, to three-second cutscenes, to huge moments or grand spectacles, to background dialogue).

# Cinematic Storytelling in Mass Effect

## Camera as Character

Back in 2001, when the concept for Mass Effect 1 was first being developed, the cinematics team considered ways through which they could make the cinematic scenes more authentic and realistic. Use of lenses and camera techniques was quite forward-thinking for the time, as was the notion of communicating the presence of a cameraman (i.e., using cinematic camera techniques to provide proper framing and scene editing, thus imbuing the interactive scenes with a sense of drama). Players could feel not only that they were participating in highly dynamic story moments, but also that those moments were presented in a beautifully authored way that channeled techniques we had all come to recognize from our favorite film directors. The camera itself has become a character.

## Adding Personality to Spacecraft

In Mass Effect 2, the cinematics team invested in additional tools and processes in order to deliver even more cinematic moments, in particular scenes involving the various spacecraft. The memorable scene in which the player comes face-to-face with the new Normandy—after having experienced its destruction firsthand in the game's opening sequence—utilizes the full spectrum of cinematic storytelling techniques such as camera, lighting, and music. This helps the player fall in love with the new ship. Indeed, the scene plays out like meeting an old love, one you never thought you would see again.

All of these techniques come together in Mass Effect 3. The cinematics team had to find a way to communicate story and character through each of the ships in the game—the Normandy, the Reaper ships, and others—and in the battles between them.

## Using Lenses

The team developed a standardized lens language for the game, including how lenses were used to portray specific ships, locations, and characters to help capture iconic silhouettes for each. For example, female characters would be viewed through longer lenses to avoid distorting their proportions, whereas aliens tended to look better through wider lenses, the distortion adding to their sense of “otherworldliness.”

## Smoother Editing

Improving the editing of scenes and narrative delivery was also a big focus for Mass Effect 3. Transitions into and out of gameplay sequences were made smoother, delivery of story information was tightened, and the overall presentation of cinematic story flowed much more naturally and with stronger forward momentum than ever before.

## Connecting to Shepard

In all the Mass Effect games, the cinematics team paid particular attention to how Shepard would be introduced to players at the beginning of the game and how he would appear throughout the entire experience. This meant creating specific shots, some of which were used in all three games. For example, the shots where the camera tracks Shepard's movement as he travels through the Normandy (in Mass Effect 1 and 2) or in the trial scene (in Mass Effect 3), and the slow pan around to reveal his face. This is particularly important, as players can customize their own Shepard, and this reveal is hugely validating as a cinematic introduction to their personal character.

Another subtle cinematic technique the team has used to create a stronger bond between the player and their Shepard is the subjective camera used in all three games when Shepard is coming to after having been unconscious. In Mass Effect 1, this occurred after Shepard's first visions of the Reapers. In Mass Effect 2, it was when he woke up on the operating table in the Cerberus reconstruction facility. In Mass Effect 3, it was after the explosion in the trial that launches Shepard across the room. These scenes not only provide a highly cinematic moment for players, but they also allow them to feel that they are experiencing what Shepard is experiencing: Their vision is blurry and then resolves to clarity. And once they can see clearly, they feel they are Shepard.

## Inspirations

For real-world film inspiration, the team looked at films from several directors. A few stood out: the films of Ridley Scott; the Oscar-nominated Afghanistan war documentary Restrepo, which portrayed the gritty, dirty life of soldiers in that conflict; scenes from Akira Kurosawa films, in particular the burning of the third castle in the film Ran. Within specific battles, the team tried to capture the spirit of warfare throughout history—shots of soldiers lined up and firing down a line recall rows of riflemen with muskets, the smoke and sound of fire “hitting” the camera. There is also a shot the team referred to as a “thousand ships,” which was inspired by the Trojan War. These inspirations added an air of authenticity to the cinematic experience of combat and helped deliver a sense of the game being in a “timeless war.”

## Cinematics Production Process

For Mass Effect 3, cinematics production was a complex, multistaged process involving several departments, continuous iteration, and an incredible attention to detail. Unifying techniques and processes from video games and film production, the team at BioWare have evolved a workflow over the creation of three Mass Effect games to boast one of the most mature cinematics production methodologies in the industry:

1. Cinematics team will get a script for a scene or even just a short description from the writing team.
2. The team will do a storyboard pass, brainstorming various ways to set up shots and move the camera before bringing it back down to the basics. The team asks the question, "Are the shots in the storyboard sufficient for communicating the story in the scene?" If the answer is yes, they are ready for the next step.
3. The team will create a scene using "previz animatics" (rough animation that shows the intention of a scene and helps work out specifics around camera position, timing, cuts, etc.) based on the storyboard. The previz sequences are built within a gray-boxed space with static characters, using animatics for basic action and cameras. All geometry is placeholder at this point, and there is little thought paid to the finer points of lighting and whatnot. The scene will often be previz'd to a temp audio or music track that is intended to help communicate the overall mood of the scene.
4. The previz sequences will be put together, creating the "narrative playable." This playable allows for iteration to happen until the basic flow, pacing, camera position, and editing cuts are in place. The playable may be shared with music composers at this time so that they can begin making plans for how to score the scene.
5. The team then reviews the density of narrative content when playables are stacked together. This can reveal areas where there are too many cinematic story moments occurring in sequence without sufficient interactive moments or breathing room in between. The team can then take a step back and evaluate, with the writing and level design teams, how to reorder the moments so that pacing feels more natural.
6. Once the pacing and location of individual narrative playables are in place and considered locked, the cinematics team proceeds to animation and motion-capture to create the character movement, body language, and facial expressions that will bring the characters and story to life.
7. The team takes their previz animation to the motion-capture studio. Each character does not have a single actor assigned to it; rather, there are certain actors who help set the style of body movement for a particular character, which the team then utilizes depending on the needs of the scene. Hand animation is used to smooth out any slight variations in the performance for a certain character that has been played by multiple actors. This ensures that a particular performance matches the original reference established for that particular character.
8. For characters who have specific voice actors, like the Illusive Man, played by Martin Sheen, the team will screen the previz, and the actor will deliver a voice performance based on the previz scene. Often the actor will add so much to the scene through their voice performance that the animation team will revisit a scene and reanimate to capture the magic of the actor's performance.
9. Once all this work is done, the cinematics team begins collaborating with the level-design team to integrate the cinematic sequence into the game. The lighting team will get involved to help ensure the scene looks as good as possible, and the visual effects and audio teams will add the final layer of integral polish to the scene. Music will then be integrated, and the scene will be complete.

# Digital Characters

## Creating Closeness

As a series, Mass Effect has always emphasized the importance of relationships between characters. In some cases, these relationships are friendships. In others, intimacy is involved. Creating digital characters that feel lifelike and do not present themselves in a way that ruins the player's suspension of disbelief is a huge challenge. Creating digital characters capable of communicating strong emotions between each other is even more complex.

The Mass Effect games often show characters touching each other. Whether this is Shepard pulling an ally out from flaming wreckage or helping them up from a seated position or laying a hand on a friend who has experienced a tragic loss, these moments heighten the realism of the characters and their plight, as well as strengthen the player's connection to them. Their emotions feel real.

Beyond that, the close intimate relationships between characters are as much a technical achievement as they are an artistic one. Characters touching, kissing, or giving each other emotional gazes—these are all actions that we take for granted as being easy, yet within the digital world of a video game, they require state-of-the-art technology and the team's dedication to complex problem-solving. These are difficult problems to solve; you need a team that cares about solving them.

## Cinematics vs. Real-Time Story Moments

Mass Effect 3 delivers its story through multiple types of sequences. Each type offers its own advantages and costs to the project, and all require a staggering amount of technology and manpower to create:

- Prerendered cinematic scenes (also known as “cutscenes”) are fully animated sequences that are triggered at specific moments during the game. These sequences tend to be highly produced, with custom lighting, music, and visual and auditory effects, and are reserved for major, significant story moments. Prerendered cinematic sequences have the advantage of offering the animators full control over the circumstances during which they will be viewed by the player, which means they can be highly produced and do not need to account for player input that might modify the outcome. These are essentially short, linear movie clips that offer no interactivity.
- Interactive dialogue scenes need to account for a range of variables; for example, which allies did the player bring to the scene, or what choices have they made elsewhere in the game that have an impact on available dialogues? The player can interact with these scenes through the “dialogue-wheel,” which enables them to make significant choices about the content and outcome of a particular conversation. There are hundreds of these scenes in Mass Effect 3.
- In-game dialogue scenes are those in which allies make short comments or observations while the player is moving through the world. The player has full control over the scene, and the allies typically offer this ongoing commentary as they follow the player character through the world. These dialogues require the least amount of effort to integrate into the game but are also the least produced.

As a general rule, the more polished and special-case a piece of content is, the more expensive and limited it is in terms of facilitating reusability. The fact that players can often not tell the quality difference between these types of scenes—all of which are seamlessly blended together throughout the game—is a huge testament to the talent of the Mass Effect 3 development team.

## Scaling for Variety

For Mass Effect 3, a full-time animator resided within the cinematics design team, their express purpose being to create animations to support the emotional moments. When a request for a character moment came through from the writing team, the animator would first work with the cinematic designers in reviewing the thousands of existing animations to see if any currently existed that could meet the needs of the scene. If not, the animator would try blending snippets of existing animations to attempt to reuse content that was readily available.

If the scene needed animation that did not currently exist or could not be assembled out of available pieces, the animator would work to capture the necessary animations during the next motion-capture recording shoot.

This process meant that dialogue-heavy story scenes that were fully interactive—meaning they were not prerendered cinematics, and the player was left fully in control—boasted a healthy amount of animation content captured expressly to service the needs of these scenes.

With over 300 dialogue scenes in Mass Effect 3, there was a real risk that content reuse could lead to a feeling of repetition and “sameness” about the content. Players are very sensitive to content reuse, and seeing the same animations used over and over again in multiple scenes can make a game feel like a “budget” production. Using the above process, the team was able to ensure a feeling of purpose-built content having been created for each of the scenes, adding to the quality of the player's experience.

The Illusive Man

## The Eyes Have It

Presenting convincing digital characters is highly dependent on how true to life a character's eye movement is. This includes where the character is looking relative to the player's expectations. Do characters appear to be looking at each other when they are speaking? Do they appear to be looking at the player when they should be? Do they stare lifelessly in the completely wrong direction? Do their eyes blink realistically? Do the subtle eye movements mesh with the emotions they are conveying through dialogue and body language? This, again, is a highly challenging area of character production and one that the Mass Effect 3 team invested significant resources in solving.

When characters in Mass Effect 3 look around the world, they refer to a set of values that reside "under the hood." These values define various parameters around eye movement and are tweaked endlessly to get the best results. Using these values as a baseline for eye behavior, designers are then able to place "look-at targets" in the world that instruct the digital characters to look at very specific locations over the course of a scene—an object, a character, the player's character, and so on. Once the scene is playable using the designer-defined "look-ats," the animators can go in and tweak the eye movement by hand for any instances where the programmatic solutions do not work to their satisfaction.

While many of these tools and processes existed in earlier Mass Effect games, new technology was developed to help ensure the eye movement and look-ats for characters in Mass Effect 3 would look natural and would avoid behavior that pulled the player out of the experience.

The end result is some of the most believable-looking eye movement of any digital character in the medium to date.

## Lip Synchronization

As with eye movement, ensuring digital characters' mouths are moving appropriately—known as "lip synchronization," or, more commonly, "lip-synch"—is a critical part of delivering a believable, high-impact performance.

While the Mass Effect series used specific technology to automatically generate the movement of characters' lips in real time, there was also an extensive creative process that went into ensuring the technology was tuned to deliver believable, engaging performances. The original automated technology could bring the lip-synch to an acceptable baseline level, and with the help of the programming team, the bar could be raised to a new level of quality.

In order to improve the lip-synch, the team developed a process inspired by the breakdown of speech in traditional 2-D character animation. In this type of work, animators pay specific attention to the shape of the mouth as it creates specific vowel and consonant sounds. When animators look at the sounds coming out of the mouth, the goal is to ensure that the mouth "snaps" to the vowel phoneme sound at the beginning of the word by culling the consonant at the start of the word, with the exception of certain consonants like M, B, and P. These vowel phonemes at the beginning of words tend to be where the shape of speakers' mouths are most exaggerated and is what we tend to read when we are looking at someone's lips as they are speaking to us.

The second improvement came about because, although the automatic lip-synch technology did a good job, it was not able to distinguish between which phonemes the viewer's brain would ignore when reading the lips; the tech simply generated individual mouth shapes for all phonemes it detected and for each word in a line of dialogue. This often resulted in very unnatural, jarring mouth movements.

Another evolution of the tech used in Mass Effect 3 meant that the technology was able to detect instances of "jabber jaw," those cases where the automatic lip-synchronization tech was generating phoneme shapes at too high a frequency, leaving characters' lips looking like they were mumbling or teeth like they were chattering.

The final step the animators took to ensure the lip-synch was to the highest quality was another process derived from traditional 2-D animation. Typically, in games, the lips are animated to be precisely synchronized with the dialogue audio they accompany. In 2-D animation, the lips are animated so that the animation triggers slightly before the viewer hears the audio. This accounts for how the eye and ear each receive data and how the brain processes this data. The Mass Effect 3 animation team was able to recreate this subtle but noticeable shift, producing lip-synch results that are highly realistic and can satisfy the ultraperceptive human eye.

Through trial-and-error and a lot of iteration, the animation team was able to use a combination of technical horsepower, creative skill, and raw attention to detail to produce nearly perfect lip-synchronization for the dialogue sequences throughout the game.

## Level Design in Mass Effect 3

### The Level Designer

The act of environment and encounter creation in any level-based action game is an organic, almost mystical process that brings all the disciplines together—artists, programmers, and perhaps most importantly, the level designer. The level designer is where the “rubber hits the road.”

Equal parts architect, combat tactician, builder, and artist, the level designer is responsible for bringing together content, systems, and aesthetics, and then translating these things into an experience that will be fun, challenging, and pleasurable for the player. More than that, it has to be memorable.

As with many outcomes of high craft, good level design is often invisible; it becomes such an organic outcome of the player’s experience of the game that it is indistinguishable from all the other game elements. There is a cohesion that makes the experience shine, and the player is left with an indescribable sense of everything just feeling “right.” In other words, when it works, it just works.

### Creating Levels in Mass Effect 1

Mass Effect 1’s level design process was largely an outcome of its origins as a spiritual follow-up to *Knights of the Old Republic*. In *KotOR*, the combat systems were still largely based on “die-rolling,” meaning, as with the tabletop pen-and-paper RPGs that inspired it, the computer is rolling a die (in this case, triggering a number generator) to determine a relatively random outcome to each combat event.

This all happens outside the player’s knowledge. When the player initiates an attack, the game logic calculates the attack’s likelihood of being successful based on various parameters and then assigns an outcome—for example, damage to the target.

Mass Effect 1’s combat system determined outcomes using a similar system of “rolling the dice,” the effect being a combat experience that did not always feel intuitive, satisfying, or responsive to the player. In fact, under this system, it was entirely possible for players to miss, even though all the visceral feedback provided by the game suggested strongly that there should have been a hit.

Level creation in Mass Effect 1 was also a fairly rudimentary process by the standards of the sequels. Levels were created by artists, with aesthetics considered before the playability of combat. Level designers provided guidance on where cover objects should be placed, but the placement of those cover objects was still being done by the level artists. As a result, the levels and layouts looked beautiful and were a pleasure to navigate through but were not always set up ideally for cover placement that would support an optimal combat experience.

### Creating Levels in Mass Effect 2

For Mass Effect 2, the gameplay design team wanted to bring the combat gameplay closer to what player’s would expect of a shooter. This would make ranged weapon combat feel more satisfying to the player, which would in turn make the entire gameplay experience more cohesive.

In a pure shooter, the outcome of combat is not based on “die rolls” but rather on real-world notions of line of sight, bullet accuracy, and penetration of armor. Ray-tracing techniques are used to determine whether an individual projectile hits its target or not: the game calculates the path of the projectile, what lies between it and its target, what the target is doing, and how it is equipped defensively. The resulting outcome is much more logical, intuitive, and in many ways, and satisfying. Without necessarily being able to articulate exactly why, the combat just feels better to the player. This approach also made the placement of cover objects much more critical to the end result. In reviews, Mass Effect 2 was lauded for providing a highly improved combat experience that brought the game in line with players’ expectations of a sci-fi-based action RPG.

Level creation in Mass Effect 2 also changed accordingly. Rather than having artists create the level spaces as in Mass Effect 1, level designers created and iterated on “gray boxes”—level environments with untextured geometry and basic lighting intended to provide a low-cost environment to facilitate iteration on cover placement, line of sight, blockers, portals, access points, and so on.

Only when the levels were deemed ideal spaces for gameplay did the artists begin to beautify. This process tweak resulted in gameplay spaces that were as playable as they were pleasing to look at.

## Taking Things to the Next Level in Mass Effect 3

Despite making massive improvements to the combat spaces in Mass Effect 2, the team still felt they could do better. Using Mass Effect 2 downloadable content modules as test-beds, the team was able to experiment with new ideas and iterate on existing systems to create a combat experience in Mass Effect 3 that eclipsed what had been done in the previous two games.

One way in which combat spaces were improved in the DLC (downloadable content) was by experimenting with line of sight—what the player is able to see from any given position. In Mass Effect 2, players could enter a combat area, choose a cover point, and fight the majority of the battle from that location. This put them in a fixed position where mobility was not a factor and meant the combat space was not as dynamic as it could be.

The team addressed this in Mass Effect 3 by creating combat areas that would encourage players to move from location to location. By placing objects that would block the player's line of sight from a specific location, they would still be able to sense that the combat area extended beyond their current visible range. In effect, they would have a blind spot.

This would encourage them to move from point to point, advancing through the combat space and engaging in a much more dynamic combat experience. With combat areas being more open, players would have more space to move around utilizing flanking maneuvers, forcing themselves and their enemies to travel around the environment.

By moving around, players would not only expose themselves to enemy fire—raising the threat to them and, correspondingly, the tension and their stress level—but they would engage in a more active navigation of the area, employing skill and tactics in how they use their weaponry and how they exploit the environment to their maximum benefit.

As a result, the combat spaces in Mass Effect 3, and the encounters themselves, offer more choices to the player and more interesting challenges, and it feels much more satisfying to win.

## Building Encounters Around Themes

In order to evolve the encounters in Mass Effect 3, the team needed to take a different approach. Rather than creating spaces like dungeons and simply populating them with enemies and asking players to fight these enemies as they passed through the area, encounters would be imbued with stronger contextualization through regular objective updates for the player. The player would always be given a clear goal to accomplish, and the enemies would stand between them and that goal.

This simple but fundamental shift in the encounter-design philosophy for Mass Effect 3 led the team to another realization: that their strongest levels and encounters were unified through common themes. Building experiences around themes provided cohesion to the player experience and was a process that ranged from macro to micro in scale. Everything from the overall context wrapper, to subplots and character arcs, all the way down to individual moments and mission objectives played a roll in this.

## Exploration Movement

In Mass Effect 3, the team introduced a new paradigm to their development of game levels: exploration movement. Ladders, jumps, and drop-downs provide variety for the player and would allow the game environments to unfold along both vertical and horizontal axes. This was in contrast to levels in Mass Effect 1 and 2, which were unable to provide major height variations without including long ramps, something few level environments could support. The inclusion of ladders alone had a huge impact on the team's ability to create interesting, multilevel layouts, as ladders could easily be accommodated in almost any type of space and provided a great deal of flexibility. This also meant that encounters could exploit multiple tiers—enemies could approach and fire upon the player from varying heights, creating more dynamic and engaging combat spaces that push players to deal with threats on both the vertical and horizontal planes.

“Level design is about providing the player with interesting choices, but not too many at the same time. These choices must have interesting consequences for the player.”

Bastiaan Frank, Lead Level Designer, Mass Effect 3

# Creature Design

A successful combat system depends on a clear and compelling relationship between the tools the player is given and interesting opportunities to use—and master—those tools. With all the enhancements to Mass Effect 3's combat experience—through stronger level design, greater breadth in the weapon modification systems, improved weapon feedback, and so on—the biggest change came in the form of the enemies themselves.

As with other areas of the game, what players experience in Mass Effect 3 is the result of an evolution through the previous two games and accompanying downloadable content (DLC). With Mass Effect 1, players were fighting what essentially amounted to sci-fi skins on common Dungeons & Dragons-type enemies.

With a stronger core of shooter gameplay, Mass Effect 2 introduced additional enemy types, yet most were variants on standard bipedal humanoids, all toting guns, and combat occasionally suffered from a feeling of "sameness". All enemies fell into three categories of behavior: enemies that would use cover, enemies that closed distance and used melee attacks, and enemies that ran at the player, shooting. On top of this, the enemy profiles—the shape and color of enemies, which is how players identify the different threats they face onscreen—tended to blend together.

For Mass Effect 3, the team knew they needed to up the ante with creature design. This increased focus was formalized through assigning a full-time designer solely to creatures for the duration of the project.

The new approach identified clear and distinct roles for each enemy type. Roles defined clear goals for the creatures, with unique behaviors (gameplay actions driven by AI) created to support these goals. Beyond this, many creatures were also given discreet weaknesses—for example, the Guardian's shield can be knocked away, and destroying the Ravager's "sacks" prevents them from spawning new enemies. This gives players opportunities to develop new tactics and discover the optimal ways to overcome the various enemies.

Through roles, each enemy would introduce a new power into the combat dialogue. For example, some would push the player into cover; others would force them out. Some would approach slowly, soaking up damage and presenting a great threat if they made it up close. This allowed the designers to play with parameters like time and distance when building encounters; some enemies would become more dangerous the closer they came to you, others would become more dangerous the longer they were left alone, and so on. Presenting these enemies together in interesting combinations would form the basis of the improved encounter design in Mass Effect 3. Players would be given a true combat puzzle to solve.

Enemies were also given a variety of ways to move and approach the player—for example, rocket boots allowing them to fly up or down, leaping, climbing walls, and so on—adding dynamism to the combat and making them look interesting while simultaneously keeping players on their toes. Many of them would have a way to force themselves into the player's combat space, a custom "entrance" that would surprise the player and challenge them to engage and use all their own skills—as well as the Shepard's abilities and arsenal—to fight, and win.

## Combat Example from Biotic Student Rescue Mission

At position A, a fixed turret cannot move but is highly dangerous if you are exposed to its fire. You enter the space, coming under fire from the turret, and take cover in position B. Mobile enemies attempt to flank your position, forcing you to engage and exit your protective cover. You are again vulnerable to the turret.

Your task is to find the best way to exploit the environment, the weapons in your arsenal, and your abilities and those of your allies to destroy the enemies you face.

## Animating Combat and Creatures

One of the great improvements to the creature animation process in Mass Effect 3 was the ability for the gameplay design team to iterate on creature behaviors almost immediately, whereas they historically had to wait for animations to be created before they could test creature behavior out. The ability to test quickly allowed for more and faster iteration, working toward a good result before committing costly animation resources.

The combat designers start with a “box creature,” which essentially is a series of different sized boxes joined together to create the sense of a head, torso, limbs, and so on. Using this simplistic creature, designers could experiment with timing of movement and attacks, pacing, and speed.

In parallel, the animators build an animation tree, a kind of blueprint that outlines the various movement capabilities of a character and the relationship between the various subanimations that comprise the action.

Once the combat designers understand, in rough terms, what the combat gameplay requires a particular character or creature to be able to do, the animation team works closely with them to find ways to visualize this through movement. This is a close collaboration that involves both artistry and highly technical skills. It is a constant balancing act between what looks natural and effective versus how quickly a certain move needs to be carried out in order to satisfy the gameplay requirements. An incredible amount of tuning is involved with finding this often nuanced “sweet spot.”

The process unfolds in phases. Phase one involves animators putting rough posing and timing into place, the idea being to establish a basic set of motions so that the designers can tweak and tune as quickly as possible. At this point, the character is simply a set of boxes. The designers are able to integrate and tweak these animations quickly to bring the character to a baseline functionality and understand the scope and type of motion that the character requires. Once the designer and animator are satisfied with the basic motion, the animator can move to the next phase, which involves adding layers to the existing animation, secondary movement that will help smooth out the actions and make them flow more naturally and seamlessly from one to the other. At this point, timing has been locked down and the combat designers can tune, provided the animation does not get broken. The third and final phase involves animators going in and polishing the final animations to ensure they achieve a shippable quality.

Animators often work from reference material. Sometimes this includes films and sometimes they will act out certain motions and record them for future reference.

For Mass Effect 3’s combat animation, the team reviewed footage of soldiers moving. Shepard’s movement befits a soldier—a confident stride, quick movement when he needs to get into or out of cover, and dexterous reactions without being too agile (he’s not a ninja, after all). With his expanded movement set in Mass Effect 3 (e.g., being able to slide into cover), the team added some parkour influences to his movement set. For some of Shepard’s melee actions, the team referred to footage of Krav Maga, the martial art developed by the Israeli Defense Forces.

Weapon reloads in games need to be very fast, as your character will suffer if the process takes too long, leading to player frustration; however, there is also an expectation that the animations will make the character look compelling and will telegraph status without the player really needing to pay close attention. In other words, players want to feel cool when they are reloading, but they want it to happen quickly so they can get back into the fight. They don’t want to have to wonder if the movement is finished or not.

The weapon reload animations in Mass Effect 3 enjoyed a major overhaul. The team referred to footage of “speed-loading” competitions—an actual competitive sport where firearms enthusiasts attempt to load various weapons as quickly as possible in a kind of timed race.

## The Future of Interactive Storytelling

The future of storytelling in games is going to involve players in new ways through different types of interfaces and different ways to engage with the game. New formats and technologies will enable new delivery methods; for example, gamers might stream games through their televisions. The player experience, and particularly how it relates to narrative presentation and player involvement, will need to be built from the ground up to account for these evolutions in the medium.

Mass Effect 3's inclusion of voice commands, supported by the Xbox 360 Kinect, provide a glimpse of future interactive storytelling. When players converse with AI-controlled characters, they are able to actually speak with them and focus more on the conversation, without needing to rely on a traditional controller to select the next piece of dialogue. It feels more natural and can help players become more invested in the characters and the world. The act of actually speaking to a character does more to stimulate a player's mind.

In the future, people may look back at the traditional control methods and say to themselves "That was the old way."

## Theme of Survival

The Mass Effect 3 team wanted to channel an even stronger sense of urgency and high-stakes for Shepard and the human race, building on the intensity of the previous Mass Effect games while bringing Shepard's story to a resounding crescendo.

The team drew inspiration from World War II to develop the tone and themes for Mass Effect 3. They wanted the game to feature a large-scale conflict that would pull various disparate factions together and unite them under difficult circumstances to fight a common enemy. The theme for the game, therefore, became one of survival.

This theme unified all the campaigns, levels, and encounters in Mass Effect 3. In the game's stunning opening mission, Earth experiences the Reaper invasion firsthand, making the story personal for the player by raising the stakes for all of mankind. During development, the survival theme for this mission was "Rome is burning", with players having to escape and then reluctantly leave the cradle of humanity to pursue an even greater responsibility thrust upon them.

The theme of survival within the massive galactic conflict carries throughout the game. Within the safety of the Citadel, civilians chatter about how the war has affected them, providing players with various points of view on the conflict. Combat is intense, raging within massive set-piece battles that serve as constant reminders of threat the galaxy faces.

Gameplay systems like the "Galaxy at War" metagame involve the player's actions in gathering support and material for the liberation of Earth. Even subplots, such as the krogan's relentless pursuit of a cure for the genophage, focus on survival. Collecting these war assets are vital to Shepard saving the galaxy.

Even the Normandy, the player's home base and secondary avatar in the game, returns in a much leaner, meaner form than the gratuitously sleek Cerberus Normandy from Mass Effect 2. The retrofitted Normandy in Mass Effect 3 is utilitarian, intensely focused, and ready for battle—a warship in the spirit of the classic WWII battleships.

In addition, soldiers are more prevalent than scientists on this mission. Even talented biotic students on a distant school ship become a weapon in humanity's arsenal against the Reapers. It is up to the player to marshal their resources and hone them into a sharp spear point with which to strike at the heart of the Reapers.

The theme of survival is strongly present in all areas of the game. It is communicated through the art direction, the music, the plot, the dialogue, the environment design, the levels, all the way down to the encounters themselves. This strong cohesion of game elements makes this third and final chapter in Shepard's story the strongest expression of Mass Effect's creative and thematic ideals set forth in the first game nearly five years ago.

# Gameplay

## Strong Player Association

From its inception, Mass Effect was intended to be an action-oriented role-playing game, or action-RPG, based within the third-person shooter genre. In third-person shooters, players can see their character onscreen, as opposed to first-person shooters, where players mainly see their hands and the weapon they're holding.

The benefit of third-person games is that players can see their character on the screen at all times; in many cases, this creates a stronger bond between the player and the character they are controlling. This was particularly important to the team at BioWare, since their focus on storytelling, character development, and allowing the player to create their own Shepard meant the player would see their creation and feel an even stronger emotional connection to the hero they were playing, since they had created it themselves.

## RPG Roots

Having just finished *Knights of the Old Republic* to massive critical and commercial success, the gameplay team approached the original *Mass Effect* from a very RPG-centric point of view. This meant a lot of the gameplay, and combat in particular, was very statistics-based: the player's abilities, the characteristics of a weapon, any kind of upgrade or modification made to ammunition, accuracy, and so on. These elements all defined the player experience more than a player's skill or whether a particular action "felt good." The designers creating these stats-based systems were referred to as "systems designers."

In *Mass Effect 2*, the gameplay team worked to better integrate third-person-shooter mechanics that were more about "feel" than about statistics. This meant the player experience became focused on gameplay: the way the player's control of character, camera, and systems, combined with the visual and auditory representation of the action (animation, visual effects, sound effects, etc.) resulted in an experience within the game that was challenging but enjoyable. The designers creating these experiences became known as "gameplay designers."

For *Mass Effect 3*, the team asked themselves how they could take the gameplay experience, and combat in particular, even further than they had in *Mass Effect 2*. They implemented an enhanced weapons-modification system to give players the opportunity to experiment and extract even more gameplay value from each gun in the game. They added increased mobility with actions like sliding, melee, combat rolls, and climbing. They fleshed out the cover-based gameplay of *Mass Effect 2* and overhauled the character ability systems. The *Mass Effect 2* team had three gameplay designers. On *Mass Effect 3*, that number increased to six.

*Mass Effect 1* was an excellent role-playing game, and the team's first cover-based third-person shooter. With *Mass Effect 2*, combat gameplay evolved to be competitive with other premiere shooters. *Mass Effect 3* is the culmination of the previous two games in that it is both an excellent RPG and an excellent action game—the ultimate synthesis of key learnings and an evolution of process and developer skill over the course of the *Mass Effect* franchise.

## Evolving Abilities

The ability system in Mass Effect 1 gave players a range of choices between statistics-based abilities and gameplay-based abilities. The fact that the technology enabled physics-driven gameplay had a huge impact on the way the biotic abilities were conceived and presented in the game. These types of physics-driven abilities, like picking up an enemy and throwing them across a room with your mind, lent themselves naturally to being more gameplay-focused than statistics-focused.

In Mass Effect 2, the gameplay team shifted the abilities system to emphasize gameplay-focused abilities nearly exclusively. All abilities would have a visual outcome that could be perceived by the player and would not have effects that were hidden “under the hood.”

## A Design Philosophy

"To me, an RPG is about debate. One of my combat designers will come to me and say, 'Half the people love the shotgun, and half of them hate it,' and I'll tell him, 'Then you're done. It's a good weapon.'

"But when everyone loves it or everyone hates it, you have a problem. The same logic applies to the abilities system, how players choose to build out their particular class. Being able to debate your choices and defend them to other players, justifying your particular play style—this is at the heart of being an RPG."

## The Many Stories of Mass Effect

The Mass Effect 1 team spent the entire first year of the project developing the universe of Mass Effect. Their goal: to create a space within which they could tell dozens of interesting stories. The Mass Effect trilogy is Shepard's story, told inside the Mass Effect universe. But the universe is rich and diverse, with many more stories to tell.

## Mass Effect Inception

The nondescript exterior of the five-story brown edifice that houses BioWare's Edmonton studio blends into the background of this mixed commercial industrial area in south Edmonton. Flanked by hotels on one side and a busy four-lane freeway on the other, the building's generic nature stands at odds against the incredible creative output from the over 200 game developers who inhabit its upper three floors.

Considering how garish and ostentatious the video game industry can be at times, a casual observer might be surprised to discover that despite the lack of corporate pomp and circumstance evidenced by this structure, some of the best video games in the world have been conceived, created, and shipped from within these walls.

The story of Mass Effect's inception began in the fall of 2003. During the previous summer, the studio had shipped what would become one of their biggest sellers to date, and certainly one of the highest rated and most beloved in the pantheon of Star Wars games—Knights of the Old Republic (2003).

KotOR was BioWare's answer to the console role-playing game (RPG), a genre that, until then, had long been dominated by the Japanese industry. By allowing players to explore the depths of the Star Wars mythology, BioWare not only created one of the most successful and highest-quality Star Wars games to date, but also laid the groundwork of fan base and fiction they would later capitalize on with their massive multiplayer online game The Old Republic (late 2011).

Being huge fans of science fiction and storytelling, the KotOR team appreciated the opportunities the Star Wars property provided them to create a nearly endless supply of compelling fictional characters, worlds, and dramatic arcs—all core elements to a successful RPG. But they also felt like it was time to spread their wings. Creating their own setting would allow them even greater freedom to explore fresh ideas and to put their own spin on the sprawling space opera, giving them full control over how they wanted to evolve their own story arcs and characters over the course of multiple games.

So in the fall of 2003, while working on shipping the PC version of the hit RPG, the core KotOR team, led by project director Casey Hudson, began to envision what the next BioWare game might look like. With rumors of the next-generation Xbox in development, the team set themselves to the task of defining what an original BioWare science-fiction RPG, powered by next-generation console technology, would be.

The project began with a single document. Hudson drafted a one-page outline of what he believed the game would have to be—structurally, technologically, and creatively—in order to really create a fruitful, creative space for near-endless exploration and strong fan and community engagement. Simply put, Casey said, "We just wanted to make the biggest, best game experience we could conceive of." The document was given the deceptively generic title "SFX," an acronym for "science-fiction X"; the resulting game would be anything but generic.

Within the one-pager, SFX was articulated from a very high-level: It was to showcase an original science-fiction universe, featuring space travel, and players would have their own ship. The game content and systems would be built to support the player, who would be able to experience the biggest possible science-fiction adventure.

The document also described some of the ways in which SFX would capitalize on next-gen technologies. The new project would harness a critical discovery the team had made during the development of KotOR: By bringing the camera in closer to the game's action and storytelling, players developed a more intimate, lasting connection with the events of the game and with the characters themselves, leading to stronger long-term engagement.

Even with KotOR's relatively basic (by today's standards) character-realization technology, the team realized that the magic of the game emerged from the player's experience of the world through the characters with whom they interacted. A big focus of SFX would be leveraging the power of new technologies, made possible on the new consoles, to advance the art and science of digital characters.

A game this large and ambitious inspired equally ambitious goal-setting. Not only would BioWare create a sprawling story-driven science-fiction RPG, but they would also conceive of it as a trilogy, creating a vast universe that could support the needs of three massive games. And with interactive storytelling being a cornerstone of BioWare's development culture, the new game would include what Hudson referred to as its "killer feature": Players would be able to take their character from one game to the next, and their decisions in the story and during gameplay would follow them through the three-part saga. This would be the first game series to support such unparalleled persistence in player decision-making.

Casey Hudson

"We just wanted to make the biggest, best game experience we could conceive of."

With these high-level goals in mind, the team turned their attention to building a universe. They began by tackling such foundational decisions as the nature of space travel—for example, would it include relativistic effects such that supporting characters would age while players traveled through space? Would there be aliens? Would the game take place on a single world or multiple worlds? How large would the known universe be? The answers to these questions would help determine the range of possible player activities.

Once the team had established the basic structure and parameters of the universe, they turned their attention to writing the multiple storylines that would support the player's experience. They had to create key characters, races, home planets, and star systems, and they had to define cultures and histories for entire civilizations.

Overall, this conception of the format and universe that would become Mass Effect would occupy the team for more than a year and would lay the groundwork for one of the richest and most engaging science-fiction settings of all time. But the work was only beginning.

# Q&A: The Art Direction of Mass Effect

Interview with Derek Watts – Bioware

The visual design of Mass Effect was one of the first things people noticed when the game was first announced back in 2006. To this day, the visuals in the franchise are still one of its strongest defining characteristics. How was this art direction conceived?

We developed the art direction for Mass Effect about eight years ago. We had just come off of Knights of the Old Republic, and that helped define what it was we wanted to do. We knew we wanted to make a science-fiction game, but knew we couldn't set it in a Star Wars-like universe. We were inspired by the clean, epic futurism of Syd Mead, John Harris, and John Berkey. Syd Mead has a signature style that is clean, futuristic, purposeful, and very different from Star Wars. His art suggested colorful and hopeful worlds with clean designs—not bleak settings. These were places you might want to go to, places you could imagine yourself being.

We drew inspirations from these artists and began working in our own element.

When we began designing other elements of the world, we knew we didn't want characters to have bulky armor or clothing with too many layers. We knew the design had to look futuristic but not ridiculous. Armor and clothing ended up being very tight. Based on fan feedback, we bulked up the armor on characters over the course of the franchise—for example, Shepard in ME1 looks small due to his armor being skintight. In ME3, we've made his armor look more imposing to give him more presence. But regardless, the initial design principles have remained throughout the franchise.

For Shepard, elements like the red stripe and the N7 logo (which was actually extrapolated from a logo on a pair of skis) were things we played around with in concept art that stuck around and became part of Shepard's personal branding.

It's interesting when you are developing an artistic style for a game. At first all the feedback you get from people is comparing it to things they've seen elsewhere. After the game comes out and resonates with players, the style becomes its own. Now we hear things like, "Hey, I just saw this movie and it had a Mass Effect feel to it."

It was clear with the first screenshots for Mass Effect 1 that you guys were trying to differentiate yourselves visually from all the other sci-fi games out there, starting with the brighter color palette.

We definitely wanted to have pools of bright color, saturated color, etc. We didn't want to have the desaturated browns and other earth tones that a lot of action games were using at that time. We wanted to evoke the feeling in our players that these were places they would want to go to. They weren't bleak, there's a sense of hope, there's purpose to the design, environments are uncluttered, etc.

We actually referenced a lot of real-world architecture. Santiago Calatrava, the Spanish architect, has designed these amazing buildings that are really there. They are built. They exist. It was important to us that we were inspired by things that were functional and true, both from an architectural and engineering standpoint.

Do you have a label or name that you've come up with for your art direction?

Actually, we don't. (Laughs). We basically call it the Mass Effect style. We know what it means, and when we look at something, we can evaluate whether it looks "Mass Effect-y" enough or not.

The Normandy, for example, has iconic features like the little metal frames around the exhaust ports. We recreate these same features on other ships to echo this design, and it becomes the "Alliance" style. The Normandy itself was heavily based on the Concorde—a very futuristic-looking airplane in its own right.

The designs are very iterative. The Mako, for example, was initially designed to be large and heavy like artillery, but this led to problems with scale. In the game, the enemies were too small to see by comparison, so we shrunk it down to support gameplay. We ended up designing most of the Mako iterations with six wheels, and that stuck throughout the process. Eventually we decided that six wheels was a characteristic of vehicles in the Mass Effect world, so we carried that throughout a lot of the vehicle design. Of course, in the second game we decided to move away from the wheeled vehicle and made a flying shuttle instead, but a lot of the same design principles persisted.

What was the design process behind the alien races? They are such a big part of how you express the Mass Effect universe, and they are so unique in their own right.

When creating characters and races, we've followed pretty much the same process throughout the franchise: It usually starts with writing. The concept artists like to get a paragraph describing the background of the alien. That gets the creative juices flowing. We then start designing in phases. In phase one, we'll give the character artist full freedom to explore the character, and they'll create six or seven designs—they'll go quite crazy and wild. After this phase, we'll winnow the design down to two or three concepts and then gradually just chip away at it until we have something that starts to feel right. It's a balance, though—you usually start with a rough idea, but you want the concept artists to have freedom to use their own creativity, because you never know what you'll end up with in the end. They usually don't want too much information from writing—just enough to give them a starting point. For example, what is the inspiration for this "people"? Are they militaristic? Pacifists? Are they a birdlike race? Are they from lizards?

A good example of this process is the design of the krogan. In the original description from the writers, there was some mention of bats. If you look at the krogan head, you can see some of the shapes of a bat head in there. A lot of people look at the design and assume we were going for reptiles. With Garrus, the writers mentioned the turians were a proud, birdlike race with a strong military tradition. We went through tons of iteration across four different artists, and then when we finally nailed it, we didn't change a thing beyond that.

Garrus Vakarian

Sometimes the final design is a hybrid. For example, the salarians: one artist designed the head, another the body. We always imagined salarians being our version of the "gray" alien—the one you always see in autopsy hoaxes. Using that as a starting point, we explored different ideas for what their bodies would look like and hit on the idea of a sunken chest. That really stuck, and then that informed what the rest of their body would look like. Their armor needed to follow the shape of their body, so the salarians ended up with this really iconic armor profile.

We designed all the aliens without clothing so that the modelers would know exactly how to create clothing and armor for them. This mattered because otherwise the artists wouldn't know if the hump on a krogan's back, for example, was part of the armor or actually part of their physiology. Knowing what the aliens looked like under their clothes helped ensure we could create realistic designs that conformed to their physical characteristics.

Garrus Vakarian

So the process was very exploratory, highly iterative. Sometimes you'd find it right away, and other times you really had to work to find the right design.

Exactly. A great example of this was Thane in Mass Effect 2. We had a lot of difficulty finding the right design for him. What threw the artists off was this note from the writers that said Thane was to be a potential female love interest. We went through tons of iteration with his design. At one point he was a bird-of-paradise with feathers all over him. He had white skin with giant red dots, he was transparent, etc. We asked for feedback from some of the women in the office to see what they thought, and the reaction was just horror. We knew we needed to go back to the drawing board. In the end, we found a great design for Thane—it just took a while to get there.

Disciple

---

What was your process for the industrial design for weapons? What did you use for reference?

For Mass Effect 1, we made the weapons look a bit more like they belonged in a science-fiction film. We didn't want to push that too far—we still wanted the weapons to look practical. As with ships, we tried to include the arch. If you remember the M-8 from ME1, it had this strong sweeping arch in the design, but at the same time it would look right at home on a present-day battlefield. We added dials and things to make the weapon look functional, but we didn't want to take it too far; the designers are passionate about real-world weapons, so we were inspired by actual weapons.

We have always struggled to balance how futuristic the weapons should be. We were inspired by the Japanese anime movie *Appleseed*. It has these phenomenal weapons with organic designs. We looked at a lot of anime, which often has really interesting ideas for things like panels and the way weapon handles form to the hand.

For Mass Effect 3, we had the chance to develop more alien weapons. We used the weapons in the movie *District 9* for reference. It was fun exploring these because, for human weapons, we had decided to not take the science-fiction elements too far, but for the alien weapons, we could push it. So, for the asari weapons, we used a very clean design with shapes and curves that match the way the asari look.

In Mass Effect 1, you introduced the idea that the player could see their weapon loadout on their character. The weapons were modular and could collapse down to fit onto the character's back. But when the player would enable them, the character would grab them and the weapon would unfold and come to life, as if to say, "I'm ready." How did that figure into the process of weapon design?

We looked at character designs showing all the weapons on the back and decided it looked really cool. For the first few weapons, we designed them meticulously so that they could collapse realistically, and we involved the animators in the design since they would have to be the ones to make the weapons fold naturally. We soon realized that it was incredibly hard to make weapons that could fold and collapse down in a realistic way, so we started to design them to identify "cut lines" where the modelers would break the weapon up into pieces. The animators would then animate the collapse and unfolding animations using those cut lines. The end result was that the weapons did not always fold realistically, but they always looked good. And it really came down to the animators finding clever ways to collapse the weapon down in such a way that there wouldn't be too much of the weapon geometry crashing or sticking out from the player. It was pretty challenging for the animators. Sometimes we would hand them these really huge guns and sort of wish them good luck in figuring out how to collapse them down. But they always did.

There are a lot of amazing locations in the Mass Effect games. Walk us through the process of how you create a new location. As with the characters, does it begin with story?

Pretty much. But even before the writing team gets too far, we'll have concept artists working on ideas. Right after we finish a game, we start brainstorming new worlds. We create massive art folders and just fill them with reference images and concept art. To start the process, we'll gather ideas for locations without knowing much about the story. There's a bit of a chicken-and-egg process going on—it's difficult for the concept artists to be inspired to create an image without text to help them get started, and the writers and designers work better when they have a piece of concept art to inspire them. This early ideation process is really important for the concept artists, especially after we've completed the last project—it gives them a chance to unwind and try new ideas.

We use a lot of real-world references for these locations. There are so many amazing real places on Earth that people don't know about. We use National Geographic a lot to find these. We just look for a "hook," something from the real world that inspires an idea, and then the final design feels more realistic because it was inspired by a place that really exists.

Sometimes the locations are inspired by what we think feels natural for the type of race. For example, we always thought the salarians would live in a hot jungle, so we created a lush, humid world for them. We thought they might live near rivers and would set their structures in harmony with nature—they wouldn't overbuild. They would blur the lines between the landscape and their architecture. Even when you look at their bodies, which have a very organic feel to them, they don't seem like they would build angular structures of concrete and steel.

So using that as a starting point, we go out and find as many real-world references as we can. For the salarian lab facility, we were inspired by a shopping mall in Turkey that had amazing arches and a kind of layered terracing between levels. The concept artists use this reference art as a starting point when imagining these environments on a grander scale.

M-25 Hornet

---

We've talked a lot about the conception of the individual races. Within that, what was your process for creating individual characters like Commander Shepard?

Well, Shepard was quite the challenge, being the main character and the face of the game in terms of how it was marketed. We gathered a lot of references and built a huge folder of concept art while exploring the style of his armor, his appearance, his face, etc. For his face, we always knew we would scan in an actor's face, but we needed to figure out what that actor should look like.

We had some good ideas for the armor. We drew versions of Shepard with light, medium, and heavy armor before deciding to use the heavy armor. At one stage it was red. The iteration process is to create character concepts, pick the strongest direction, put the designs on the wall, and then gather as much feedback as possible. The team thought Shepard's red armor looked too clean and made him look like a medic. At one point an artist did a charcoal-colored version of the armor with a stripe and a symbol on it. Everyone really liked that, so it set the tone for the direction we would take. After that, we only explored dark armor. We gave Shepard the white and red stripe to make his design a bit more iconic, and then we came up with the logo. The logo was actually originally inspired by a logo on a piece of ski equipment. We put it on Shepard just to see what he might look like with a logo and didn't really give it much more thought. It resonated really strongly with the team and fans, so we made it part of his uniform.

For Shepard's face, we took the body we had built and tested it with heads from different actors. We went through a lot of different actors but couldn't find the right fit. We had a stack of magazines we used for reference nearby, and the one on top had some photos of a popular male model. We tried his face and it really worked. It gave him a unique look; he wasn't the "all-American" hero, but one that looked multicultural, a bit of a mixed European look. This suited what we thought the future of human heroes might look like, where ethnic lines would become more blurred.

And at that point, when the artwork started to be seen more and more—by the team, by the fans, in marketing material, etc.—the iconic elements like the logo and the stripe would appear more and more often, and we kept putting it on more and more things because it seemed to resonate so strongly. We discovered how important those elements were to Shepard's "brand."

How big is the art team on Mass Effect 3?

The number fluctuates between 50 and 75 artists and animators. That breaks down by focus to be about 5 character artists, 2 to 3 concept artists, close to 20 level artists, 10 to 12 cinematic animators, 5 gameplay animators, and a number of additional artists to support cinematics and prerendered scenes. We also outsource at times. The attention to detail poured into the game by each of these artists and animators is truly phenomenal.

If the art in Mass Effect is special, it's because of the love these artists have for the license, the universe, and wanting to continue pushing the visuals to create compelling worlds for players to experience. It shows in all the work they do.

## Q&A: The Writing of Mass Effect

Interview with Mac Walters – Bioware

Where does BioWare's love of story-driven games come from?

The source goes back to the founders, Ray Muzyka and Greg Zeschuk, who love story and wanted to create games in which story was important. Over the years, BioWare's games have delivered compelling stories. It's something the studio is known for. Our games put the player's emotional involvement with the characters first.

BioWare is one of the rare studios that has put a tremendous emphasis on storytelling, with major investments in people and tech to support this. How big is the writing department on Mass Effect 3?

There are 17 writers on staff and 5 editors. In addition to the writers, there is an entire cinematic design department that was born out of the development of Knights of the Old Republic, their role being to support all the conversations created by the writing department. In fact, it goes far beyond support—the cinematic designers have their own skills and expertise that has allowed them to take the conversations much further than we as writers ever thought possible. So, between writers, editors, and cinematic designers, there are nearly 35 people working purely to support storytelling in the game.

### Are there specializations within the writing team?

On most of our earlier games, the writing teams were small enough that every writer had to wear multiple hats. The writing team on Mass Effect 3 is big enough that we have been able to let specializations occur naturally. So, some people will focus on writing content that helps flesh out the world, like planet descriptions for uncharted worlds, and Codex entries, or things like the Cerberus Daily News in Mass Effect 2. You also find that some writers are really strong at understanding the role-playing aspects of the game, and so they focus on those elements. Still others are really into the characters and understand emotional engagement and writing scenes that really draw the player in.

### Where do you typically recruit writers? Is there such a thing as a typical place?

There really isn't a typical place. Our writers come from diverse backgrounds, which is one of the team's strengths. Some writers come fresh out of school, others come from having written screenplays, others are from within the games industry, and still others who are involved as editors or with the theater scene. These diverse backgrounds mean we come up with more diverse and interesting content.

### In addition to writers, there are editors on the writing team. What do editors do, and how do they fit into your workflow?

Editors are responsible for managing a lot of the non-voice-over text that goes into the game—things like Codex entries, weapon and ability descriptions, etc. Sometimes they are writing this content as well, but generally they are keeping track of it and organizing it. They make sure all the text gets translated into the various languages and establish standard processes for getting text content into the game—a huge task when you consider how many people are creating content for the game. And they do all the other things you would expect of an editor: They review the text, make sure it's grammatically accurate, no spelling mistakes, etc. And then we also have editors who are involved with the dialogue we create, and they are responsible for trimming and streamlining the dialogue to make sure that our dialogue delivery is punchy and as economical as possible, to avoid things getting too verbose for the player.

### How many lines of dialogue do you have in the game?

Mass Effect 3 has about 41,000 lines of voice-over dialogue. Also, with better editing and just being better at using our dialogue, we're able to make the 41,000 lines go even further than the lines in previous games. Mass Effect 3 has the most dialogue of the three games in the franchise. We've added a lot more banter into the game, and much more ambient dialogue than the previous ME games. All this together makes for a very rich dialogue experience in ME3.

How is the writing team integrated into the rest of the development team?

Over the years, we've learned that close collaboration with the other departments is the best way for writers to work. The writers are encouraged to spend time with all the other teams, share what they are working on, interact with them and solicit feedback, ask questions, etc. The writers should not be sitting by themselves—they need to get out and talk to the level designers, the animators, cinematic designers, etc. Writers should not wait for any of those groups to come to them; they need to be proactive in seeking and sharing information.

Has the writing team developed any specific processes along the way?

During Mass Effect 2, we began developing what we today call the Narrative Review process. It's a process we've evolved heavily during Mass Effect 3's development as well. This process starts before we even begin developing any levels in the game. The project leads will establish a "hook" for a level. This might be a simple statement, what we call a "razor" for a level. The razor is usually a short evocative statement that captures the theme of a level. So, for example, the razor for the opening levels in Mass Effect 3, where Earth is attacked and ravaged by the Reapers, was "Rome is burning." This succinct statement captured the tone and sense of chaos we wanted to explore in that section of the game.

Once we have the razor, we start working with the level designers, gameplay designers, cinematic designers, and then start to flesh out what this razor means. How will it be supported by gameplay and action and story moments, etc. Coming out of these conversations, we develop a Player Experience document, which is a short document—about one page—that describes the core experience of that level. Once that Player Experience document is approved, we create an Execution document, which literally walks through each step of the player's experience. The Execution document includes feedback from all the content creators who will be working on that piece of the game, so they can collectively determine what work needs to be done to deliver the level.

Once the Execution document is approved, we are basically given the green light to create the content, at which point we collaborate as a big multidisciplinary group to create the level. By this point, so much iteration has occurred that we might look back and see a lot of the original ideas from writing are gone, have been improved upon, that things have been streamlined, or that new ideas have been added to the mix.

During the development of the content, the writers will work closely with the level designers and cinematic designers, supporting them with content, providing tweaks, updating them on new direction or edits that need to be made, and generally making sure that everyone is aware of any changes to the narrative that inevitably happen over the course of development.

In terms of writing, one of the strongest elements of story in the Mass Effect games is the characters themselves. How were they conceived and developed?

The emphasis on characters in our stories is highly intentional. We feel like the best stories are the ones with the strongest characters, and that's what we as players relate to, more so than even the epic storylines and themes themselves.

The process of character creation depends on each character, and what role they play in the story. For example, in Mass Effect 2, we knew the Illusive Man was going to be a key character; he'd be the player's mysterious contact and guide throughout the game. We spent a lot of time defining his psychology and how he would react to various situations. And then we worked out things like how influential he was, what resources he'd have access to, who did he have working for him, and most importantly, what his motivations were.

Once we have some of this background material fleshed out, we work with the concept art team to figure out what these characters look like. The concept art becomes the razor for that character, quickly informing players as to what that particular character is all about.

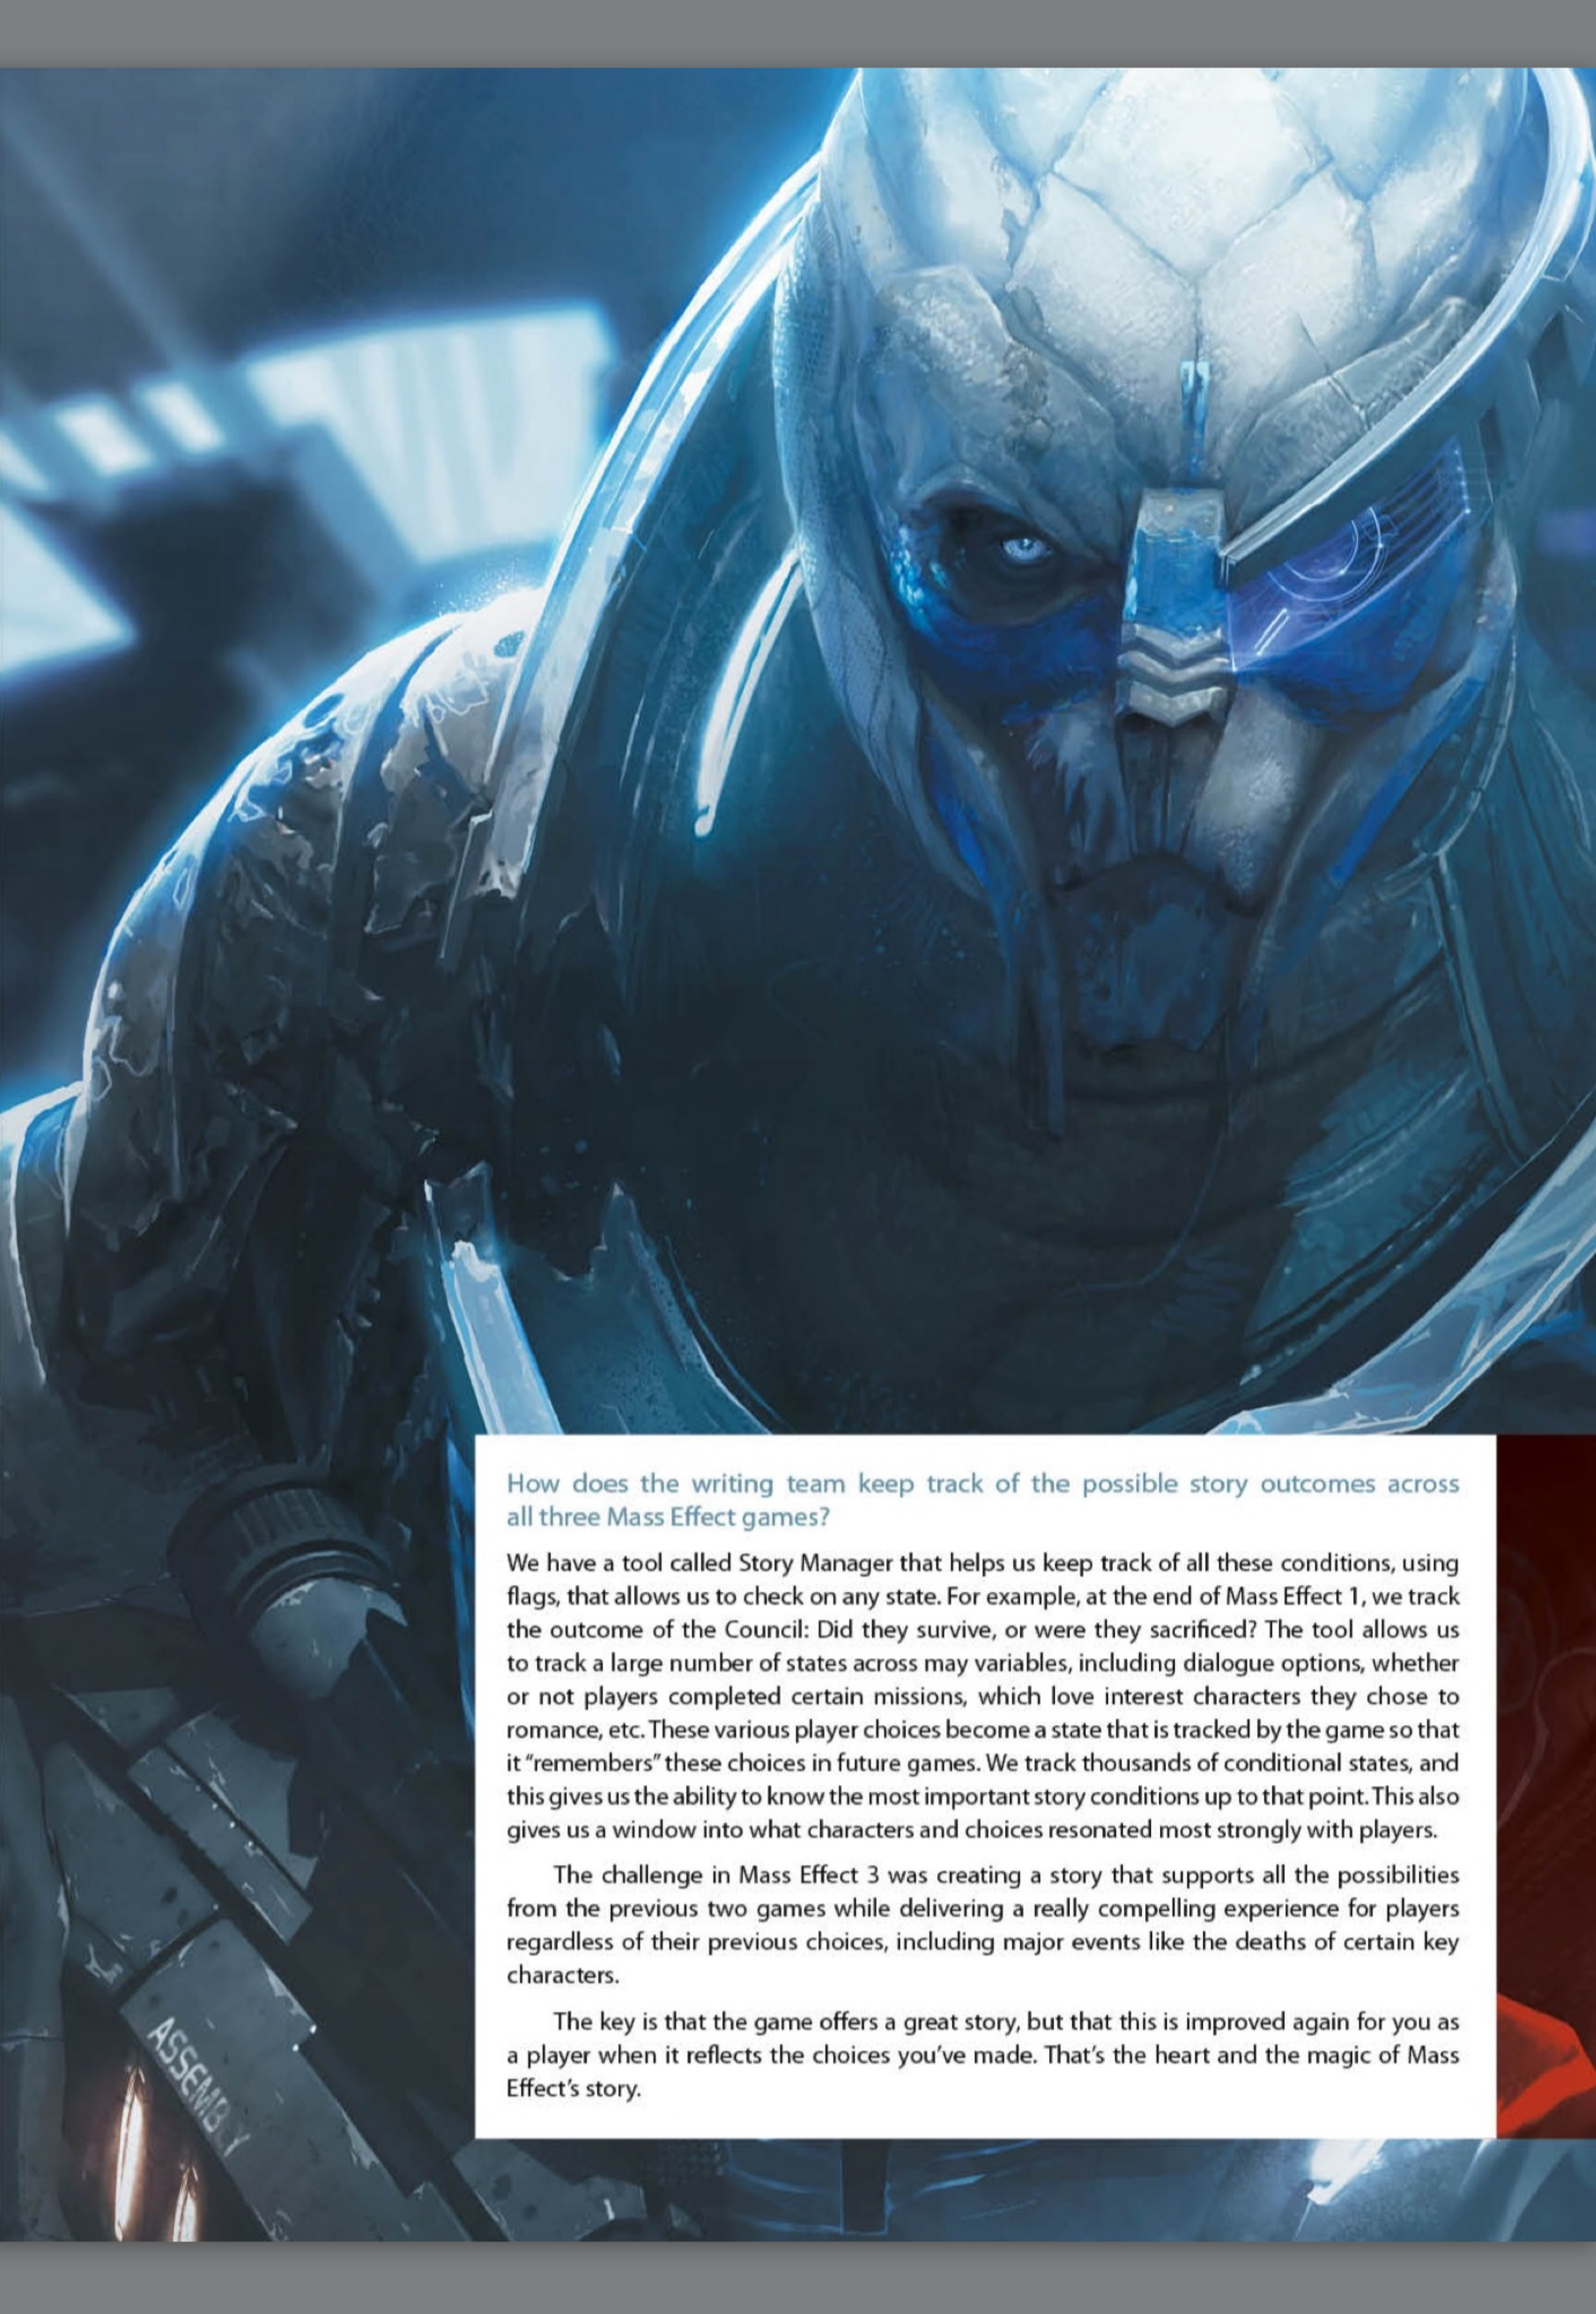

Sometimes the character-creation process is much more incidental, such as with Thane in Mass Effect 2. We knew we wanted to create an assassin character but didn't have many specifics in mind beyond that. As we developed his character, we ended up creating a whole new species for him, detailing specific characteristics such as how his species recalls events, their relationships with other races, etc. Thane wasn't critical to the bigger story, but in exploring him as a character we discovered new opportunities to expand the Mass Effect universe.

How does the writing team track the various story threads in a Mass Effect game? What tools do you use?

We start with a five- to seven-page document that outlines the high-level story of the game. This becomes the source of the emotional backbone of the game and hits on all the key beats in the story. It's worth noting, however, that this document doesn't try to define any of the missions or levels in the game; it is simply an outline of the story we want to tell with the game. This document goes through a lot of revisions—for example, the last version for Mass Effect 3 was revision eight or nine. Then, when we go through the process of defining the individual levels—with the gameplay designers, level designers, cinematic designers, etc.—each of those levels gets its own document as well.

A new process we implemented for Mass Effect 3—and one that was very successful for us—was that we created a flowchart outline of the story, showing all the various "modules" of the story and how they related to each other based on the possible player choices. Each mission would be represented on this flowchart, including the key narrative beats of that mission. It became so big that we had to put it on one of the walls near where the writers work. The flowchart was so useful that people on the team would wander over to have a look at whatever new thing had been added or updated, and that would encourage informal discussions to occur, which would lead to other new ideas being formed. This visualization of the story meant that anyone could simply walk up to the wall and immediately get a clear sense of what was going on with the story.

How does the writing team keep track of the possible story outcomes across all three Mass Effect games?

We have a tool called Story Manager that helps us keep track of all these conditions, using flags, that allows us to check on any state. For example, at the end of Mass Effect 1, we track the outcome of the Council: Did they survive, or were they sacrificed? The tool allows us to track a large number of states across many variables, including dialogue options, whether or not players completed certain missions, which love interest characters they chose to romance, etc. These various player choices become a state that is tracked by the game so that it “remembers” these choices in future games. We track thousands of conditional states, and this gives us the ability to know the most important story conditions up to that point. This also gives us a window into what characters and choices resonated most strongly with players.

The challenge in Mass Effect 3 was creating a story that supports all the possibilities from the previous two games while delivering a really compelling experience for players regardless of their previous choices, including major events like the deaths of certain key characters.

The key is that the game offers a great story, but that this is improved again for you as a player when it reflects the choices you’ve made. That’s the heart and the magic of Mass Effect’s story.

# What Makes BioWare Tick?

Game development is a bit of a black art, with every studio plotting their own approach to the creation of their games. With BioWare developing some of the best and best-loved games in the world, one has to wonder: What makes the company so successful?

## Focus on Emotion

Through their games, BioWare has always sought to create experiences that are about story and emotion. Their investment in talent and technology has always been oriented around the goal to engage players deeply. This has resulted not only in BioWare games having some of the best interactive storytelling in the industry, but also one of the most loyal fanbases in the business. Gamers come to care about the BioWare games they play because they are able to invest in something more than technology or action. They form personal connections to the digital characters in the rich worlds they are invited to explore. They want to inhabit those worlds, and the worlds become part of them.

## Common Pillars

All BioWare games embrace a set of common player experience pillars: being able to explore, having nonlinear and interactive storylines, and having strong action and combat with the freedom to define and progress your character. BioWare sets out to create games that support these experience pillars.

## Labor of Love

BioWare does everything they can to help the player fall in love with their games. This often comes down to details, the tuning and polish that can only come at the very end of a project. On a macro level, a version of the game without this additional attention from the team would be nearly identical—what the player sees on the back of the box, what is shown in trailers, and even moments that are sampled would feel like the same game. But because everyone on the team wants the player to fall in love with the game, they pour their heart and soul into making it as good as it can be. These hundreds or thousands of little details—polished items, a tight narrative, clean art assets, optimal performance, and no bugs—result in a shipped game that players can fall in love with.

## Culture of Excellence

As development on a BioWare game comes to a close, everyone on the team is playing it regularly, sharing feedback, and logging bugs they come across. Beyond the team, play-testing feedback is being gathered from dozens of sources: focus testing, mock reviews, executive reviews, and so on. All feedback, no matter the source, is considered valid and valuable. The team is pragmatic about taking feedback. If one or two people out of five hundred recognize a flaw or feel that something is amiss about a point in the game, scaling up to several million players means a lot of people might feel that same thing. Being open to all feedback is a big part of what makes BioWare games so polished and successful, and this openness to feedback and criticism extends to all areas of the team itself, because after all, the team members are usually their own worst critics.

## Creating Greatness

In the end, clear goals and a mature process certainly play a role in explaining how BioWare can deliver such well-crafted, successful game experiences. But ultimately it is the passion of the developers that ensures the player experiences magic through the game. The team at BioWare constantly pushes themselves to perform better and better, with the ultimate goal of creating great and long-lasting games for their fans.
